1 Executive Summary

The Water Demand Division (WDD) of the Monterey Peninsula Water Management District (MPWMD) is responsible for processing water permits, conducting inspections, managing conservation programs, and other water use regulatory functions affecting all residential and commercial properties in the cities of Carmel-by-the-Sea, Del Rey Oaks, Pacific Grove, Monterey, Sand City, Seaside and unincorporated areas of the Carmel Valley and Pebble Beach, California.

Monterey Peninsula Water Management District (MPWMD) wishes to enhance the existing database system to incorporate more efficient and effective functionality. The enhancement should facilitate all permitting, inspection and conservation activities it administers under Rules and Regulations adopted by the MPWMD Board of Directors.

Zone24x7 Inc. is a leading global provider of technology innovation services headquartered in San Jose, California with offices in the USA, Sri Lanka and Malaysia. Zone24x7 was recognized as a **Microsoft Certified Gold Partner** in Mobility Solutions, Custom Development Solutions and Data Management Solutions competencies due to its excellent technological solution delivery. Zone24x7 is also a **Windows Embedded Partner** with market awareness and technology advantage for Windows CE .NET and Windows XP Embedded solutions.

This Proposal outlines the functionality and the strategy for development of the proposed Water Demand Division Database System. The proposed solution identifies the need and provides improved usability along with enhanced look and feel.

Zone24x7 will be a reliable and stable technology solution partner and believes that a complete and dependable solution could be delivered within the time frames identified. Zone24x7 is pleased to provide this proposal for the above requirement and looks forward to the prospect of progressing on this proposal.

2 Overview of Zone24x7

Zone24x7: The Technology Solutions Company providing world class around the clock solutions.

Zone24x7 Inc is a leading provider of global technology innovation services. Headquartered in San Jose, California, **Zone24x7** employs the finest technology talent in the United States, Sri Lanka and Malaysia. **Zone24x7** develops and deploys mission critical, cost effective, quality enterprise products and solutions for our customers and leading software product developers.

Zone24x7's core competencies and diverse skill sets permit successful delivery of dynamic project plans in an environment of fluctuating requirements. **Zone24x7** has a unique software development model centred on global best practices. Our fast, flexible and reliable Software Development, Project Management and Delivery Process, '**ZoNe**', is based on Rational Unified Process (RUP), XP, Microsoft® Solutions Framework (MSF) & SEI CMMI Level 3 Standard. '**ZoNe**' ensures exceptional Quality Assurance and On-Time delivery—within budget—to our valued clients.

"Our success is based on impressive customer relationships and a team of high performers".

Our goal is to supply our customers with excellent services and products, based on our competence and experience. Our company is in conformity with high quality standards at every stage of the development process from the conceptual design to the product release. We are equipped with all necessary communication facilities, which allow us to be in touch with our customers 24 hours a day.

When Zone24x7 partners with your organization, we serve as the virtual extension of the enterprise helping you to identify and capitalize on business and technology opportunities. We have established effective working relationships with our customer base representing leading retailers in the USA.

2.1 World wide Customer Base

Zone24x7 is totally committed to customer service and satisfaction. Our growth is a direct result of our focus on quality, service and commitment to exceed customer requirements. At all times our unwavering focus is quality and value for our clients.

We have an outstanding track record of successful deliveries with extreme customer satisfaction, which provides us the advantage and helps our clients to leverage on the benefits.

Zone24x7 has a global customer base which includes the following:

3 Zone24x7 Experience & Expertise

Since our inception we have delivered innovation with leading-edge industry tools and business process expertise. We have accelerated the development of software products through top-quality program management, proven processes, methodologies, and tools..

3.1 Real Time Inventory System

Real Time Inventory System (RIS) is a re-write of a legacy retail store inventory system to meet new platform requirements while providing an architectural structure that is both significantly robust; and versatile to support current and future system requirements. This includes enhancement as well as opening up database possibilities for future applications at the store level.

RIS consists of a Web-Client, Thin-Client and several handheld applications that define, capture and send inventory data. The Web-client is a multi-tier architecture based on Microsoft SQL 2003 database and ASP .Net. It supports inventory data definitions and provides reporting capabilities. The solution was deployed on a clustered web farm that facilitates over 3 million transactions a month. Handheld applications support data capturing, auditing by scanning and transferring barcode using high speed RF handheld devices. Thick-clients provide the ability to upload inventory data from the handheld using workstations or laptops if there is a communication failure.

The project was initiated in March 2004 and was completed in December 2006. The tasks of the projects were undertaken and completed within 4320 person days.

The following is a summary of the application components;

Component	Description
RIS Web	Web component to setup inventory meta data. Provides several

Zone24x7 Proposal for MPWMD

	inventory related reports.
RIS Setup	Handheld application to setup device to capture inventory data.
RIS Scan	Handheld application to capture inventory data.
RIS Audit	Handheld application to capture audit data
RIS Data	Server component which upload inventory data to mainframe
Batch Upload Utility(BUU)	Thick client to upload batch inventory data in RF failure
RIS Balancing	Server component to check the data integrity
Remote Deployment Utility(RDU)	Handheld application to facilitate application download and execution through a menu system
Menu Builder	Tool to create handheld menu system

The RIS application was developed using the following technology;

- MS Visual C++ 1.5
- Microsoft .Net Framework 1.1 (VB.Net, ASP.Net)
- Microsoft .Net Compact Framework 1.1 (VB.Net)
- IIS Application Server
- MS SQL Server 2003 / IBM DB2
- MS SQL Reporting 2000

Proprietary information redacted

3.2 Customer Testimonials

"Zone24x7 team had been a great support for us in providing very innovative solutions which set up apart from our competition. "

Proprietary information redacted

"To the extended team, that worked on our project for the last 7 months, your dedication and teamwork were unparalleled. Congratulations, I applaud you on this major accomplishment!

Proprietary information redacted

"I would like to say how please I am with Zone and the projects we have worked on together. Being in the position I am, I frequently get asked about my opinion of off-shore development and I am quite happy to be able to respond very positively each time, and reference my real-life experience."

Proprietary information redacted

4 Zone24x7 Advantage

4.1 What We Offer

- Development of mission critical, cost effective enterprise products and solutions
- Technology Risk Mitigation and acceleration of product releases by partnering with our technical team
- Technology Outsourcing and Project Management Services
- Retail Enterprise Solutions
- Mobility Solutions - Embedded Software Development
- Systems Integration and Technical Consultancy

4.2 Our People

Zone24x7's most valuable asset is its people. We focus on state-of-the-art technologies that attract and retain top-notch technology professionals who thrive on helping our clients succeed. Our customers recognize them for their exceptional performance, innovation, and creativity. We take great pride in providing thought leadership, building sophisticated cutting edge solutions and exceeding creating client expectations.

4.3 Domain Expertise of a US Based Company

Zone24x7 is headquartered in the US, where our expertise, technology, and domain leadership is in close proximity to our clients and the markets. We strive to earn a trusted partner status with our clients through a high touch, high value and high engagement experience.

4.4 Focus on Emerging Technologies

Zone24x7's mission is to provide next generation technology and innovation services to our clients. We are at the forefront of industry trends and work with the leading product development companies. This focus on new technologies motivates our staff and results in **Zone24x7's** ability to attract and retain the best talent.

4.5 Value Proposition

- Our value proposition is based on three layers forming the pyramid of excellence: People, Process and Engineering.
- **Zone24x7's** wealth of emerging technology expertise enables it to provide technology solutions to large U.S. corporations in enterprise domains including Retail, Digital Media, Healthcare and Wireless/Mobile industry.
- **Zone24x7** is the technology partner of choice for clients seeking to utilize technology solutions in order to improve their business and create a competitive advantage.
- We have a proven track record. We work closely with large Tier 1 retailers in the United States and have established over 200,000 POS lanes.
- **Zone24x7's** management draws from prior experience including the founding and success of several companies including; Mobinetix Technologies, Crossvue and @pos.com (now a wholly owned subsidiary of Motorola Inc).
- Reduce time-to-market! We are intense, innovative, and energetic. We combine these qualities with 'ZoNe' processes specifically tuned for rapid development and manage software projects and clients to start seeing results in a matter of weeks.

5 Proposed Solution

The proposed solution provides the following services:

- **Online real-time application / request submission process (Document Manager):** This would enable the property owners to obtain, fill and submit various automated forms to WDD-DBS (i.e. permit, rebate applications, appeals). In addition, this process will support notifications (i.e. various violation notifications, credit letters, appeals and overuse consumption notification etc.) and resubmissions (including multiple amendments). Archiving and maintenance of the entire document fleet will be governed through the document management service.
- **Consumer Account Manager:** This service will act as a controller / supporting function to maintain all the consumer accounts and profiles. This service will link all the property information and the various correspondences to the appropriate property owners.
- **Schedule Manager:** Allows the system users to schedule various inspections (i.e. Permit inspection, Conservation inspections, water user credit inspections etc.), generate and send notifications (through automated mailing) to the property owners.
- **Online Inquiry Manager:** Presents different categories of information to WDD system users as well as the property owners. This will include status information of various documents submitted to WDD (i.e. permit application statuses, various inspection reports, and rebate reports), rebated items, rates and water usage information etc.
- **Report Manager:** This process will allow the users to generate various reports and publish certain reports so that relevant water consumers could view, download and print various documents and reports (i.e. Inspection reports, conservation reports, water consumption reports and correspondence reports etc.).

A futuristic suggestion would be to have online (or offline disconnected) data capturing mechanism for various property inspections (i.e. Permit inspection, conservation inspection etc.). This could be a PDA base system.

- **Water Consumption Manager:** This service will take care of extracting the water usage information received from the third-party water company (subject to available interface mechanism with California American Water Company). In addition, this service will update the consumer accounts in union with the accounts manager and trigger other services to provide various reports and issue notifications.

Apart from these areas, all the special cases mentioned in the RFP document will be handled by the appropriate services accordingly (i.e. special permits for pebble beach entitlements etc.). In addition, specified daily time-based procedures will be triggered by relevant managers (i.e. on demand letters and notifications) and will be handled by a specialized manager or the service.

In addition to above services, the proposed system will contain the following special features:

- Mapping technology
- Dashboard to encapsulate frequently accessed features
- Alerts and water consumption statistics
- Usage analysis (in rich graphical form)
- Comprehensive search mechanism

5.1 The Project Scope

The scope of this project covers the system development to address the services discussed above with regard to the 12 process areas identified in the RFP. The addressed services are based on the information available in the RFP. Any other requirements not identified in the RFP are considered as being outside the scope of this document. The project scope also covers the maintenance of the WDD-DB system.

5.2 UI Designs

Given below are sample UI designs for the proposed solution.

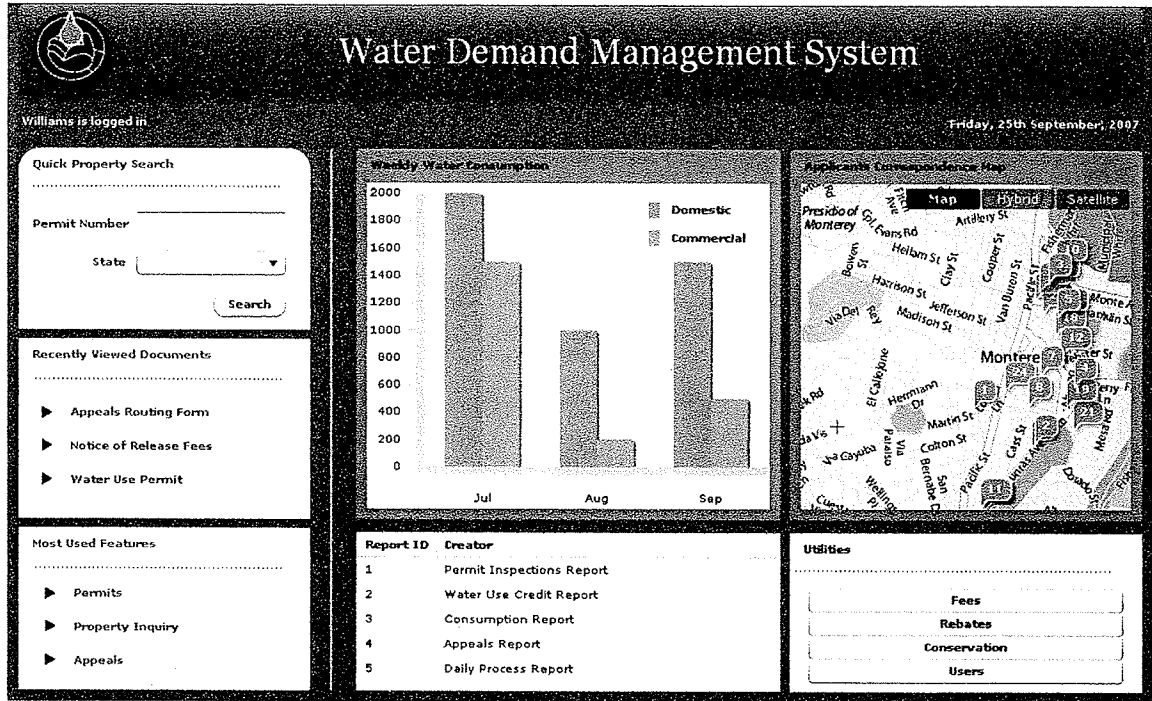

Figure 5.2.1 - Sample Screen - Monitoring

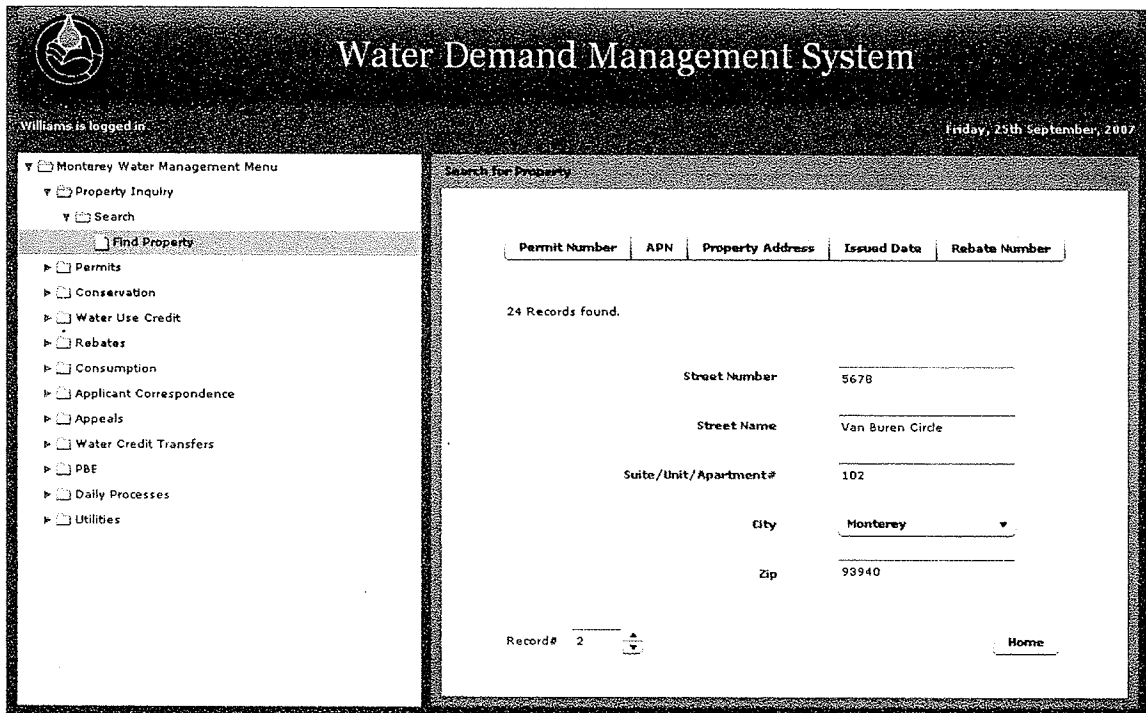

Figure 5.2.2 - Sample Screen - Search

5.3 WDD-DBS High Level Architecture

Proprietary information redacted

Figure 5.3.1 – High Level System Architecture

The WDD-DBS architecture is a multi-tier web-based architecture that is highly scalable and SOA (Service Oriented Architecture) ready. The core of the system lies in the WDD middle-tier that has been designed to encompass the business logic and domain attributes of the WDD business processes.

The following section briefly describes the main components of the WDD-DBS architecture.

- **AJAX enabled ASP.NET Web Interface**

The WDD web user-interface provides a user-friendly experience while catering to the information needs of the WDD-DBS users. It will incorporate technologies such as AJAX to enhance the performance and allow users to conduct operational activities with ease. It will be designed based on best practices and current trends of UI design; hence it will help users to adapt to the new systems within a short time.

- **Public Web API**

The public Web API will expose data of WDD-DBS to other systems in a controlled manner. This will allow the system to seamlessly interact with other systems using open standards such as XML, SOAP etc. Also, this will gear WDD towards next generation IT infrastructures, governed by Service Oriented Architectures that are increasingly being used in both governmental and commercial organizations alike.

- **WDD Middle-tier**

The existence of a middle-tier that encapsulates complex business logic will make the system more dynamic to the operational needs of WDD. It will help the UI to be developed with more emphasis on design aspects (look and feel) while not having to be constrained by business or process limitations.

Two main parts of the WDD-DBS middle-tier have been identified.

- **WDD Data Services**

WDD Data Services will deliver information to the user-interface after it is retrieved from the data stores and processed against the business logic. The core controller of this module will co-ordinate the data processing activities with the document processing operations in the document management system.

The Manager Framework will support the various services ("Managers") defined from a functional perspective. For example, the "Water Consumption Manager" will correspond to activities related to water consumption. (More details about the different managers available are given in the above section). The specific "Managers" within the Manager Framework will leverage the common services abstracted by the WDD business logic and components.

- **Document Managements System**

This is a sub-system of the WDD-DBS which will be dedicated for all document processing and transmitting operations. The basic event flow will be to access templates from the template store, then to merge them with relevant data, push them to a delivery process (e-mail or postal mail) and to track responses. If required, it could also have the capability of storing generated documents in an archive for historical purposes.

- **WDD Data Stores**

The primary data storage for the WDD-DBS is a MS-SQL 2005 Database Server. The middle-tier accesses the data stores via a DAL (Data Abstraction Layer) which will reduce the coupling with a particular database technology used within the data store. Also, the data store facilitates external systems to act as data sources to the system. For example, if the requirement exists, the consumption data provided by the water providing company can be seamlessly integrated with the data store to be used by the system in an autonomous manner.

- **Security**

Security will be taken in to consideration at all layers of the multi-tier architecture. This will allow only authorized users to gain access to information hosted by the system.

5.4 Pre Requisites

- Availability of the existing Database schemas (Data migration is not covered by this proposal)
- Availability of all the relevant documents
- Accessibility to production environment (for testing)
- Availability of client project manager responsible to baseline requirements and baseline technical architecture/design
- Availability of client project manager responsible for weekly calls/meetings for clarifications

5.5 Assumptions

- Development and functionality would be based on the functional requirements stated in the RFP documents
- Any deviation from the above specification would be upon mutual agreement between MPWMD and Zone24x7
- All hardware and hosting infrastructure would be provided by the client
- All software and database licences required would be provided by the client

6 Financial Consideration

6.1 Effort Estimate for Solution Development

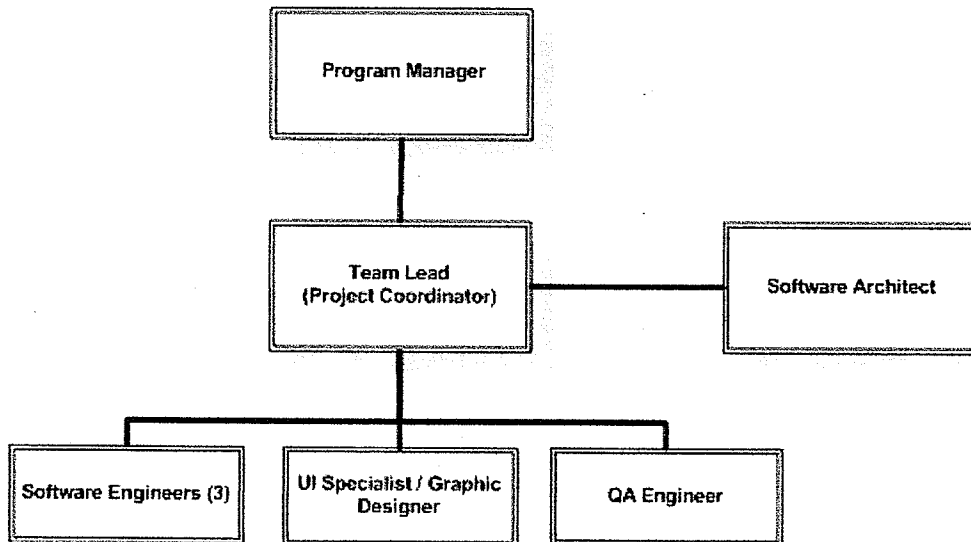

Activity	Total Cost (USD)
Design, Development & Implementation of the system as per the details provided in this proposal	\$264,920.00
Total Expenses	\$264,920.00

Payment against the invoices is governed by the terms and conditions of the Agreement agreed between Zone24x7 and the customer.

6.2 Project Duration

Delivery of the proposed system would be nine (9) months from project start date. (Please refer to Annexure A for the complete project plan)

6.3 Proposed Team Structure

6.4 Maintenance Service Agreement

The warranty period of the WDD-DBS will be 90 days. After the end of the warranty period MPWMD could enter into a Maintenance Service Agreement with Zone24x7 which would be valid initially for a period of 3 years. A total annual charge of 18% of the development cost of WDD-DBS would be applicable for the said Maintenance agreement period. The Maintenance support cost would be revised after the above agreement period.

Maintenance agreement covers the fixing of application errors only. Modifications and/or enhancements to the application will not be covered under support. Any enhancements or new requirements of the system will be addressed separately outside the Maintenance agreement. This will depend on the complexity and the impact it would have on the current system.

Any changes over and above what Zone24x7 consider minor must be discussed and agreed by Zone24x7 and MPWMD. However, depending on the extent of work involved to amend a design, change should be agreed upon by raising a Change Request Document (CRD). Any costs for the efforts initiated by a CRD will be borne by MPWMD.

6.5 Terms and Conditions

- The prices quoted are in USD (US\$).
- The prices quoted are exclusive of all taxes and levies, and all applicable taxes and duties will be charged on all invoices and have to be borne by the customer.
- This quotation is valid for 30 days from date of this proposal.
- All payments to be in paid to "Zone24x7 Inc".
- In the event the project is terminated by the customer at any stage after receipt of a Purchase Order, all costs incurred up to that point by Zone24x7 should be settled by the customer on receipt of invoice.

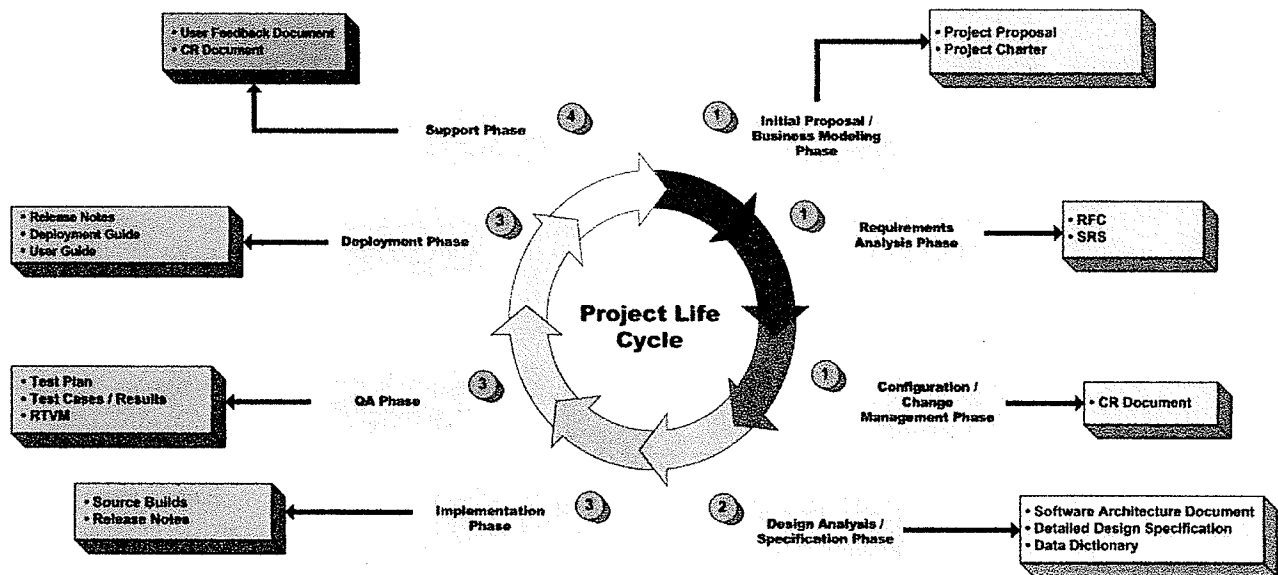

Zone24x7 Proposal for MPWMD

- **Terms of Payment:**
 - 30% on confirmation of system development
 - 20% on delivery of User Requirement Specification
 - 30 % on deployment of the system
 - 20% on acceptance of the system
- The client is responsible for meeting all deadlines for providing information, access to client employees, hardware, software, etc when requested by the Zone24x7 project team.
- Any delays on the part of client including hardware, networking & system software problems, delays in performing client responsibilities and where Zone24x7 services are required for a longer period, shall be separately charged and payable by MPWMD.
- MPWMD is responsible for identifying, selecting and procuring hosting services for operation of the solution.
- The acceptance period for this solution would be fourteen (14) days after deployment.
- The application will carry a 90 day warranty period, from the date of acceptance by the customer. During this period, any bugs/errors (software application errors of the developed solution) will be fixed without a charge, any modifications/enhancements required to the application will be charged separately.
- On expiration of the warranty period the client would have the option of entering into a software support agreement with Zone24x7 for support and maintenance of the application.
- Zone24x7 is not responsible for supporting hardware, system software, network, etc. Any support issues relating to the above such as database crashes, operating system crashes, network breakdowns, etc. would not be resolved by Zone24x7.

7 System Development Life Cycle

Zone24x7 follows a meticulous development process in compliance with SEI CMMI framework recommendations. This ensures high quality deliverables while eliminating project risks. The in-depth expertise and skill set the Zone24x7 team possesses helps each team member to proactively contribute to the ongoing development process of the project.

The 'ZoNe' process has been formulated so that the necessary documentation required for functionality, design, quality assurance, implementation, user guidance and project tracking are easily captured and communicated across project stakeholders. These documentation templates are part of the Process Asset Library we own to ensure the delivery of a successful project.

7.1 Implementation Strategy

Zone24x7 follows a structured implementation approach guided by strong quality standards. This formalized structured methodology with identified stages, activities, tasks and deliverables, when combined with the strong and proactive project management procedures evolved through the delivery of successful projects to international customers, provides a framework to guarantee on time and on budget project execution.

This approach is adjusted to ensure a perfect fit to the customer's requirements. The stages are defined to ensure a continuous, logical and phased movement towards the full realization of the project objectives in a manageable manner. The following are the stages of the development cycle we follow;

Activity	Deliverable	Remarks
Detailed requirement study and preparation of the User Requirement Specification	User Requirement Specification	
Approval of the User Requirement Specification by customer		
System Design and preparation of Software Requirement Specification	Software Requirement Specification and Detailed Design Specification	
Formulate Technical Specifications and Unit Test Plans		
Development and Unit Testing	Unit Test Results	
Formulate System Test Plans		
System Testing	System Test Results	
Preparation of User Guide & Installation Guide		
Final Quality Assurance inspection	Final Quality Assurance Inspection Report	

User Training, Implementation and Acceptance Testing	Accepting Test Results	Acceptance Test cases will be provided by MPWMD
Final acceptance and signoff		

* Please refer to [Annexure A](#) for the Project Plan

7.2 Project Monitoring & Control

Zone24x7 hold extensive knowledge and expertise in managing offshore and onshore development tasks. Credentials for the proposed solution are based on its extensive experience in software engineering, gained through working with international clients around the world.

Zone24x7 follows stringent measures to ensure communication between project stake holders. Periodic communication will be agreed upon to ensure proper updates are received by relevant parties. We follow a transparent method of providing the project progress and efforts for the stake holders.

8 Benefiting from Zone24x7

- Zone24x7 has offices in the USA, Malaysia and in Sri Lanka which allows us to operate 24 hours a day and 7 days a week.
- A Program Manager is based in the USA. This model helps in providing effective communication between the teams, and reduces the number of on-site engineers.
- Expertise in implementing firmware solutions.
- Zone24x7 strongly focus on technical systems and procedures and are following global best practices in software development, quality assurance and release procedure.
- We are in the process of formulating a technical support policy keeping the best interest of our partners and clients.
- We are in the process of obtaining CMMI certification. Initial study and analysis shows that we are already at Level 3 compliant.

9 Technical Portfolio

Scope	Expertise
Vertical Markets	Retail Telecommunication Real Time Video /Multi Media Secure communication and payments Banking & Finance Healthcare Hardware Design
Applications	Wireless/Mobile solutions PDA based Sales Force Automation Kiosk Systems CRM extensions Secure online payment solutions with multi-party transactions PKI, smart cards Java security and secure group communications. Inventory management and interfacing to enterprise systems. MPEGX and RTSP protocol related applications Firmware porting
Databases	SQL Server 2000, Oracle, MS Access 2000, DB2, MySQL
Programming Languages	C/C++, Visual C++, C#, Java, J2ME , J2EE, Visual Basic, embedded VB/VC
Technologies	COM, COM +, DCOM, ATL, STL, OLE DB, ODBC, ADO, Active X, WAP, .NET and Web Services
Internet presentation Languages	XML, XSL, JavaScript, VBscript, Web Classes, HTML, Cascading Style Sheets, ASP, MS Site Server, Macromedia Flash, Swift3D, Macromedia Ultradev, PHP, AJAX
Frameworks	MFC, WIN32, Windows SDK, Microsoft®.NET , J2EE, Struts
Web/Application Servers	Microsoft® IIS, Apache, Netscape Enterprise Server, iPlanet, Jboss, MS SQL Reporting Server, MS BizTalk Server
Operating Systems	Microsoft® Windows NT/2000, Linux, UNIX, Windows CE
Drivers	MSR software driver development OPOS/JPOS standard driver development customization PDT 3300 scanner device/protocol

4	New Functionality	5
	Annexure A – Project Plan	6

1 Introduction

The purpose of this document is to provide clarifications to the queries raised on the Zone24x7 Proposal for MPWMD, dated 3rd October 2007.

2 Level of Effort

The current project plan was derived to reflect the 12 process areas and the main requirements identified within the process areas in the RFP document. Zone24x7 will be allocating resources as per section 6.3 in the Proposal and the time durations will be according to the Project Plan in the Annexure A. Upon the detail analysis of the current system, some of the parallel development areas and common / shared services will be identified and the project plan would be updated accordingly. All the sub categories in the project plan have the following high-level task breakdown at present:

- UI Design
- UI Design – Client signoff
- UI Functionality development
- Backend [Services / Manages] development
- Reviews
- QA

These areas would be refined and updated to reflect actual functionalities after the detail analysis and the design of the project (detailed design would comprise of the core architecture which would be the basis for the entire system). Updated project plan with above identifications will be provided as a supplementary document to this Q&A document for reference.

3 Data Migration

Related quote in the section 5.4 (Pre Requisites) of the proposal only refers to the data migration plan and the associated procedures. This will not reflect any cost changes to the proposal. Due to the unavailability of the existing data formats / database schemas at the time of the proposal submission, we were unable to provide a specific data migration plan.

After identifying the existing database schemas and rules at the detail requirement study phase the data migration mechanism will be stated. SQL server migration tools will be used (if required) to simplify this process.

4 New Functionality

This would require identifying the initial requirements of the new functionality [workflow] and will then be considered through the Zone24x7-estimation process to identify the effort and cost requirements. The detail design would allow provision to accommodate new work flows which are in-line with the existing work flows (identified in the RFP)

Annexure A – Project Plan

ID	Task Name	Duration	Start	Finish	Predecessors	Resource Names
1	WDD-DBS	189 days	Mon 12/3/07	Thu 8/21/08

1	Introduction	4
2	Terms and Conditions	4
3	Estimations	6
4	Milestones Vs Cost Frame	6
	Annexure A – Project Plan	7

Addendum to the Project Proposal

1 Introduction

The purpose of this document is to provide the requested clarifications to the original proposal document, dated 3rd October 2007.

2 Terms and Conditions

- The prices quoted are in USD (US\$).
- The prices quoted are exclusive of all taxes and levies, and all applicable taxes and duties will be charged on all invoices and have to be borne by the customer.
- This quotation is valid for 180 days from date of the proposal.
- All payments to be in favour of "Zone24x7 Inc".
- In the event the project is terminated by the customer at any stage after receipt of a Purchase Order, all costs incurred up to that point by Zone24x7 should be settled by the customer on receipt of invoice.
- Terms of Payment:

Delivery / Phase	Payment Percentage
Completion of the System Requirement Specification (SRS). This includes the initial prototypes of the main User Interfaces (refer milestone SRS sign off in the Project Plan)	20%
Completion of Detail Design Specification (refer milestone DDS sign off in the Project Plan)	20%
Deployment of the system	40%
Acceptance of the system by the client according to the acceptance criteria	20%

Addendum to the Project Proposal

- The client is responsible for meeting all deadlines for providing information, access to client employees, hardware, software, etc when requested by the Zone24x7 project team.
- Any delays on the part of client including hardware, networking & system software problems, delays in performing client responsibilities and where Zone24x7 services are required for a longer period, shall be separately charged and payable by MPWMD.
- MPWMD is responsible for identifying, selecting and procuring hosting services for operation of the solution.
- The acceptance period for this solution would be thirty (30) days after deployment of the system at client site. MPWMD will be responsible for compiling the acceptance criteria and acceptance test plan and once these specified conditions are met by Zone24x7 Inc. it will be deemed as "the system is accepted by the client".
- The application will carry a 90 day warranty period, from the date of acceptance by the customer. During this period, any bugs/errors (software application errors of the developed solution) will be fixed without a charge, any modifications/enhancements required to the application will be charged separately.
- On expiration of the warranty period the client would have the option of entering into a software support agreement with Zone24x7 for support and maintenance of the application.
- Zone24x7 is not responsible for supporting hardware, system software, network, etc. Any support issues relating to the above such as database crashes, operating system crashes, network breakdowns, etc. would not be resolved by Zone24x7.

Addendum to the Project Proposal

3 Estimations

Schedule, resource and cost estimations were carried out using Zone24x7's internal estimation matrix process which complies with CMMI ver 1.2 process framework requirements. Total hours and resource allocations are shown on the project plan. (Please refer to Annexure A for the detailed Project Plan).

4 Milestones vs Cost Frame

Zone24x7 Inc. has considered the entire project scope when preparing the Project Proposal. Hence the WBS and the Tentative Project Plan outlined therein would operate within the proposed cost frame.
