HOW TO CALCULATE RESIDENTIAL CONSTRUCTION PROJECTS

For remodel and addition permits, the same Water Permit process applies to calculating the fees as for new Connections, except that no charge is made for exterior uses. Table I may be applied to remodels/additions in the same way new Construction permits are calculated. Total the number of fixture units to be added to the property. Multiply the total by \$284.20 to determine the Water Permit Capacity Fees.

TABLE I: RESIDENTIAL FIXTURE UNIT COUNT

** Requires Deed Restriction*

Credit is available for installing District-approved water saving devices. Please ask for a copy of the current credit list. Installing items listed on the credit sheet will reduce the cost of the permit. Inform staff of any credits before the permit is issued.

To calculate exterior water use (NEW CONSTRUCTION ONLY): An Estimated Total Water Use (ETWU) calculation with landscape plans must be included. Multiply the total number of fixture units including landscaping by the Capacity Fee as established by the MPWMD.

As of July 1, 2017, Capacity fee amount is \$284.20 per fixture unit in the CAW main system; in addition, an administrative processing fee of \$225 per Dwelling Unit. Amendments to existing water permits are processed for \$135 per dwelling unit.
