Monterey Peninsula Water Management District  
Technical Memorandum

2022 Supply and Demand Forecast  
September 2022

## Water Demand

At its basic level, planning water supply is being able to answer three simple questions: (i) What is our usage today (current demand)? (ii) What will we need in the future (future demand)? and, (iii) when will we get there (growth rate)? The answers translate to how much supply will be needed each year going forward. In addition, the planner also has to examine if there is enough supply available to reliably serve the 10-Year Maximum Daily Demand (MDD) and Peak Hour Demand (PHD) in the higher demand months, per the California Code of Regulations (CCR) section 64554.

The 5-year average demand from 2017-2021 was 9,725 AFY. As can be seen in Figure 1 below, the trend in water demand has been declining, but relatively steady the past seven years.

Figure 1  
Trend in Annual Water Demand

Using a fully-vetted third-party growth forecast is a very objective way for projecting water demand increase. AMBAG implemented an employment-driven forecast model for the first time in the 2014 forecast and contracted with the Population Reference Bureau (PRB) to test and apply the model again for the 2018 Regional Growth Forecast (RGF). To ensure the reliability of the population projections, PRB compared the employment driven model results with results from a cohort-component forecast, a growth trend forecast, and the most recent forecast published by the California Department of Finance (DOF). All four models resulted in similar

population growth trends. As a result of these reliability tests, AMBAG and PRB chose to implement the employment-driven model again for the 2022 Regional Growth Forecast.

AMBAG has captured the factors that influence both residential and non-residential water demand growth in its Regional Growth Forecast. AMBAG's Final 2022 Regional Growth Forecast is utilized by AMBAG in its 2045 Metropolitan Transportation Plan and Sustainable Communities Strategy (MTP/SCS) adopted in May 2022. The 2045 MTP/SCS includes a planning period through 2045. The years forecasted include 2025, 2030, 2035, 2040, and 2045. The forecast the same model that predicts employment growth using a shift-share model based on local data as well as state and national trends. Population growth is then driven by employment growth. Household and housing growth are driven by population growth, demographic factors and external factors. While the methodology for the 2022 Regional Growth Forecast has remained the same through three planning cycles, the models have been updated for the Moving Forward 2045 Monterey Bay Plan to include current data, a revised base year of 2020 and a new horizon year of 2045.

Houses and empty lots do not use water, people do. The portion of the AMBAG Regional Growth Forecast that forecasts population captures that water demand for residential purposes. Hence, the housing envisioned for Legal Lots of Record, within Pebble Beach, or elsewhere is affiliated with the population growth forecast.

Similarly, economic growth is captured in the AMBAG Regional Growth Forecast by the growth in jobs. Both Cal-Am<sup>1</sup> and the District have utilized job growth as a proxy for non-residential water demand growth. Hence, the commercial growth envisioned for Legal Lots of Record, within Pebble Beach, or due to increased tourism is affiliated with the growth in the jobs forecast.

AMBAG conducted 22 one-on-one meetings with local jurisdictions in the Cal-Am Main service area,<sup>2</sup> where AMBAG discussed the Regional Growth Forecast estimates, subregional allocations, and recent trends at the Planning Directors Forum in August 2019, January 2020, and August 2020. Those meetings were the opportunity for the jurisdictions to voice concerns that other growth-related activities needed to be reflected and incorporated into the growth forecast.

---

<sup>1</sup> Phase 2 Direct Testimony of Ian C. Crooks, Attachment A, 2022 Urban Water Management Plan, p.4-7: "For non-residential customers, water use will increase at the rate of employment growth forecasted by AMBAG."

<sup>2</sup> Attachment A hereto, Final 2022 Regional Growth Forecast, Attachment 1.

Regional Housing Needs Allocation (RHNA) housing numbers are also embedded in the Regional Growth Forecast. “The regional growth forecast (RGF) is an important reference point in the RHNA process.”<sup>3</sup>

“The 2045 MTP/SCS includes an updated RHNA. The 6th Cycle Regional Housing Needs Determination (RHND) from HCD to AMBAG is 33,274 units.”<sup>4</sup> The final growth forecast was adopted along with the 2045 Metropolitan Transportation Plan/Sustainable Communities in June 2022. The 6<sup>th</sup> Cycle RHNA Plan itself recognizes that it is contained within the 2045 MTP/SCS which utilizes the AMBAG 2022 Regional Growth Forecast. “May 2022 – AMBAG releases final 2045 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) accommodating RHNA.”<sup>5</sup> They are all tied together.

Since the City of Seaside is not entirely served by Cal-Am’s service area, only half of the future units for Seaside are assumed to be within the Cal-Am service area.” However, any future housing permitted and built in the old Fort Ord area of the cities of Monterey, Del Rey Oaks, or Seaside would also be served by Marina Coast Water District, not Cal-Am. Similarly, any housing units to be built in unincorporated Carmel Valley may be served by existing supplies that are not Cal-Am’s future supplies, but perhaps “wheeled” by Cal-Am – including 130 units at Carmel Valley Village, as well as September Ranch, that will apply against the RHNA goal, but not require a new supply to be met by Cal-Am. MPWMD believes the water for housing requirements that will be met by others should be as follows: Seaside 50% (same as Cal-Am’s own assumption), Del Rey Oaks 20%, Monterey 10%, unincorporated County 30% and should be applied as a discount to future residential water demand. These discounts will be reflected in MPWMD’s demand forecast shown below.

Many people incorrectly interpret the RHNA process as requiring housing units to be built within the next 8 years. That is not the case. The role of local governments is to participate in the development of the allocation methodology and to update their Housing Elements within the County General Plans and local zoning to show how they will accommodate their share of the housing, following the adoption of the RHNA methodology. It is a planning and zoning process. It is not a building process.

The September 8-14, 2022 edition of The Monterey County Weekly states: “Cities and counties do not have to guarantee the units will be built by 2031, but they do have to rezone areas and remove barriers to developer who may take on the actual construction.” The City of Lafayette describes the process as “the RHNA allocation is not a prescription to build any units. And, the

---

<sup>3</sup> Attachment C hereto, Draft 6<sup>th</sup> Cycle Regional Housing Needs Allocation Plan 2023-2031, April 2022, p. 5.

<sup>4</sup> Attachment B hereto, Monterey Bay 2045 – Moving Forward, AMBAG, June 2022, Excerpts, pp. 4-38.

<sup>5</sup> Attachment B hereto, Draft 6<sup>th</sup> Cycle Regional Housing Needs Allocation Plan 2023-2031, April 2022, p. 13.

City itself does not build units; private developers do. The City is only required to show that there is enough land zoned at appropriate densities to accommodate this need, should a developer want to build these units. In addition, the City must demonstrate that its codes and requirements do not unduly constrain the building of housing (for example, it needs to show that housing can be built “as-of-right” in some zones, without requiring a land use permit).”<sup>6</sup> Or, as the City of Santa Monica adds: “It is important to recognize that the RHNA is a targeted housing number - Cities and counties do not have to build this number of units, but rather they are required by the state to plan for them and demonstrate that under the current land use and development standards, there is capacity to accommodate for this number of housing units.”<sup>7</sup>

This concept is reinforced by Sand City’s appeal and statement “it is inconceivable how the City could meet the goals of the current RHNA allocation. The City of Sand City requests AMBAG lower Sand City's allotment to a number that is actually achievable in light of its small size and noted constraints” and Pacific Grove Councilmember’s statement “Do I think Pacific Grove will really build all (1,125 units)? No, but we’re putting a policy in place that is supportive of additional housing. Our staff’s job is to show that the city in good faith is implementing policing, zoning or incentives to do so.”<sup>8</sup>

The ability of the Monterey Peninsula to generate or “absorb” the housing and commercial growth will help determine when such water supply is needed. The average growth in, or absorption of, water use in the decade preceding the Cease and Desist Order (CDO) was during a period of relative economic stability, available property, no moratorium on new service connections, and lower water rates, yet only resulted in 16.4 AF per year of absorption. Things do not develop quickly on the Monterey Peninsula. MPWMD analysis below shows 31.4 AF per year, almost twice as much as the historical rate, based on the AMBAG forecast.

To summarize:

- Legal Lots of Record: Population moves to the area and lives in either existing housing stock or new housing stock built on Legal Lots of Record. Housing is already included in the AMBAG Regional Growth Forecast. Thus, Legal Lots of Record is not additive.
- Tourism Rebound: Non-residential economic growth is captured in the AMBAG Regional Growth Forecast and is not additive.
- Pebble Beach Entitlements: The entitlements represent new housing and commercial growth in the unincorporated County area of Pebble Beach. Hence, it is encapsulated within the AMBAG Regional Growth Forecast and is not additive.

---

<sup>6</sup> Attachment E hereto, Frequently Asked Questions About RHNA, pp. 17, 19 et al.

<sup>7</sup> Id., p. 16.

<sup>8</sup> Id., pp. 21, 23-24.

- RHNA Housing Numbers: The new 6<sup>th</sup> Cycle Regional Housing Needs Allocation Plan 2023-2031 is reflected within the AMBAG Regional Growth Forecast and is not additive.

MPWMD’s forecast is based on the AMBAG 2022 Regional Growth Forecast and uses current 5-year average water production, a measure of the total water required to “feed” the system for customer use, before losses and fire flows, as the base. Starting with three years of actual consumption data (2017, 2018, and 2019 – pre-COVID), MPWMD allocated consumption for residential and non-residential by political jurisdiction, based on the proportionate percentages of each then mapped the current base production to the same proportions.<sup>9</sup>

Assuming all prospective population and housing growth is captured in AMBAG’s Regional Growth Forecast and all commercial economic expansion occurs at the same rate as AMBAG’s employment projections, MPWMD offers the following water demand forecast:

Table 1  
Water Required for Population Growth<sup>10</sup>

	Monterey	Pacific Grove	Carmel-by-the-Sea	Seaside	Del Rey Oaks	Sand City	County <sup>11</sup>	TOTAL
Population in 2020	28,170	15,265	3,949	33,537	1,662	385	8,916	91,884
Population in 2045	29,639	15,817	3,984	38,316	2,650	1,198	9,916	101,520
Increase	5.2%	3.6%	0.9%	14.2%	59.4%	211.2%	11.2%	10.5%
Acre-Feet in 2020	1,675	908	413	1,015	92	21	2,221	6,345
Acre-Feet by 2045	1,762	941	417	1,160	146	65	2,471	6,961
AF Served by Others <sup>12</sup>	9	-	-	72	11	-	75	167
Net AF in 2045	1,753	941	417	1,087	135	65	2,396	6,795

<sup>9</sup> Attachment D hereto, Data and Methodology to Support MPWMD Forecast of Water Demand

<sup>10</sup> Attachment A hereto, Final 2022 Regional Growth Forecast

<sup>11</sup> To estimate unincorporated County population, use Cal-Am service area population reported in SWRCB Urban Water Supplier Monthly Reports (Raw Dataset), May 2022 value, minus urban areas. Estimate 1,000 residents added by 2045.

[https://www.waterboards.ca.gov/water\\_issues/programs/conservation\\_portal/conservation\\_reporting.html](https://www.waterboards.ca.gov/water_issues/programs/conservation_portal/conservation_reporting.html).

<sup>12</sup> This represents the portion of new residents in the jurisdiction who will reside in units served by water other than Cal-Am’s Main system. Non-Residential water demand served by others has not been designated.

Table 2  
Water Required for Employment Growth<sup>13</sup>

	Monterey	Pacific Grove	Carmel-by-the-Sea	Seaside	Del Rey Oaks	Sand City	County <sup>14</sup>	TOTAL
Jobs in 2020	40,989	8,016	3,566	10,476	748	2,092	4,300	70,187
Jobs in 2045	45,509	8,445	3,915	11,543	834	2,259	4,721	77,226
Increase	11.0%	5.4%	9.8%	10.2%	11.5%	8.0%	9.8%	10.0%
Non-Residential AF in 2020	1,547	332	225	336	22	66	853	3,380
Non-Residential AF in 2045	1,718	349	247	370	24	71	936	3,716
Increase	171	18	22	34	3	5	83	336

These AMBAG Regional Growth Forecast values can be converted to a long-term water demand forecast in the following manner:

Table 3  
Calculation of Future (Year 2045) Water Demands

	Base Year (2020)	Estimate For 2045 AMBAG	AF per Year
Net Water for Population	6,345 AF	6,795 AF	18.00
Water for Non-Residential	3,380 AF	3,716 AF	13.44
Total	9,725 AF	10,511 AF	31.44

This future year growth rate, applied annually, results in the following water demand forecast:

<sup>13</sup> Attachment A hereto, Final 2022 Regional Growth Forecast.

<sup>14</sup> California Employment Development Department, Monthly Labor Force Data for Cities and Census Designated Places. November 15, 2019. Sum of Carmel Valley Village CDP and Del Monte Forest CDP. Escalated at same rate as Carmel-by-the-Sea.

Table 4  
MPWMD Water Demand Forecast

	2020	2025	2030	2035	2040	2045	2050	2055
Water Demand - AF	9,725	9,882	10,039	10,196	10,353	10,511	10,668	10,825

This demand forecast does not need to be increased by a “peaking factor” to meet the Maximum Month Demand, Maximum Day, or Peak Hourly Demand. As explained later in the section about “Water Supply”, it is not necessary to provide additional supplies if water resources stored can be utilized to meet peak demands. Instead, stored water can be accessed with increased production well capacity, rather than over-building supplies. It is always in the ratepayer’s interest to build one or two additional production wells for \$3 million each, rather than a \$321 million<sup>15</sup> desalination plant if stored water can be utilized to meet peak demands.

## WATER SUPPLY

Available sources of supply are shown in Table 5 below and are described in the discussion that follows.

Table 5  
Monterey Peninsula Available Supply  
(Acre-Feet Annually)

Supply Source	w/ PWM Expansion
Pure Water Monterey	3,500
PWM Expansion	2,250
Carmel River	3,376
Seaside Basin	774
Aquifer Storage & Recovery (ASR)	1,300
Sand City Desalination Plant	210
Table 13 Water Rights	0
Malpaso Water Rights	58
<b>Total Available Supply</b>	<b>11,468</b>

<sup>15</sup> From Attachment C-3 of Advice Letter AL 1220-A, September 10, 2019. Proposed costs for Cal-Am desalination plant have not been updated for many years. Given current inflation, supply chain issues, and increased construction cost environment, the desalination plant costs should be updated.

## SUPPLY v. DEMAND

By comparing future supplies available inclusive of Pure Water Monterey Expansion and comparing to the expected long-term water demand<sup>16</sup>, future water supply beyond a Pure Water Monterey Expansion, such as a desalination plant, can be determined if needed for the Monterey Peninsula

The future Supply versus Demand analysis shows that the addition of the Pure Water Monterey Expansion meets the region’s demand needs for over 30 years and a new Cal-Am desalination plant, or some other alternative, is not needed.

Applying the 31.44 AFY from Table 3 linearly across a 30-year horizon results in the demands shown in the figure below showing expected supply versus demand.

Figure 2  
Water Supply Available  
vs.  
Water Demand for AMBAG 2022 Regional Growth Forecast

<sup>16</sup> Attachment F hereto, Evaluation of Water Supply Available versus Water Demand.

MPWMD also analyzed a demand forecast 25% higher, at 39.3 AF per year of average growth. That result is shown in Figure 3, below:

Figure 3  
Water Supply Available  
vs.  
Water Demand for AMBAG 2022 Regional Growth Forecast  
Plus 25% for Forecasting Error

MPWMD also analyzed a demand forecast 50% higher, at 47.2 AF per year of average growth. At that level, available supplies (with Pure Water Monterey Expansion, without a desalination plant) exceed water demand for over 30 years. In fact, MPWMD’s model shows that at 63 AF per year of average growth – 200% of or twice the water forecasted to be required for the AMBAG 2022 Regional Growth Forecast – supplies are available for over 30 years.

A contingency can be achieved by having additional stored water available to call upon at any time. This can be achieved by building up available storage in the early years where supply exceeds demand. As seen in Figures 2 and 3 above, and in the last columns of Attachment F, in the initial years following completion and availability of Pure Water Monterey Expansion (2025) the available supplies exceed demands by over 1,500 AF per year. In the very first year, more than 10% of available supplies (1,147 AF) can be stored to satisfy any contingency.

Water for available storage is shown below:

Table 6  
Water Available for Storage  
(With Pure Water Monterey Expansion, without Desalination)

Year	Storage Available Base Case Demand	Storage Available Base Case Demand + 25% Error	Year	Storage Available Base Case Demand	Storage Available Base Case Demand + 25% Error
2025	1,586	1,586	2041	1,083	957
2026	1,555	1,547	2042	1,052	918
2027	1,523	1,507	2043	1,020	879
2028	1,492	1,468	2044	989	839
2029	1,460	1,429	2045	957	800
2030	1,429	1,390	2046	926	761
2031	1,397	1,350	2047	894	721
2032	1,366	1,311	2048	863	682
2033	1,334	1,272	2049	831	643
2034	1,303	1,232	2050	800	604
2035	1,272	1,193	2051	1,469	1,264
2036	1,240	1,154	2052	1,437	1,225
2037	1,209	1,114	2053	1,406	1,186
2038	1,177	1,075	2054	1,374	1,146
2039	1,146	1,036	2055	<u>1,343</u>	<u>1,107</u>
2040	1,114	997	Total	38,046	34,392

In addition to eliminating a need for a contingency from bigger water supply construction, the stored water can be used for peaking to meet maximum month demands (MMD), maximum day demand (MDD), and peak hourly demand (PHD) without building more supply projects. As stated earlier, it is always in the ratepayer’s interest to build one or two additional production wells for \$3 million each, rather than a \$321 million desalination plant if stored water can be utilized to meet peak demands.

Stored water can also be used as a drought reserve and to provide protective water levels in the Seaside Groundwater Basin. In fact, the average water to storage in the base case above in Table 6 is 1,268 AFY – far in excess of recommended protective water levels for the basin.

If the Monterey Peninsula were to experience drought during the initial “buildup period” of ASR reserves following the completion of new water supply and the lifting of the CDO, ASR would arguably be delayed in building up a drought reserve, but it should not be overlooked that a Pure Water Monterey Expansion is new capacity without an immediate offsetting demand. That is, 2,250 AFA from Pure Water Monterey Expansion would provide an off-set in the early years if

ASR's drought reserve has not yet built-up. Just a few years of Pure Water Monterey Expansion water could also provide drought-resilience to the Monterey Peninsula.

## 2022 Regional Growth Forecast

## Executive Summary

As the Metropolitan Planning Organization (MPO), the Association of Monterey Bay Area of Governments (AMBAG) carries out many planning functions for the tri-county area including development and maintenance of the regional travel demand model (RTDM), long range transportation planning and programming and acting as a regional forum for dialogue on issues facing the region. Most of AMBAG's projects are carried out in support of these major functions, including but not limited to the regional growth forecast. AMBAG develops the forecast with a horizon year that matches the planning timeline of the Metropolitan Transportation Plan (MTP) and the model years for the Regional Travel Demand Model (RTDM). In addition to informing regional planning processes, the forecast is used by local jurisdictions and special districts to inform local and subregional planning.

The last regional growth forecast was adopted in 2018. AMBAG staff began the process of developing a new forecast in spring 2019. This new forecast is referred to as the 2022 Regional Growth Forecast (2022 RGF).

In preparation for this forecast, AMBAG staff conducted a review of recently completed population, housing and employment forecasts. The results of this review indicated that most of the other MPOs in California are using a methodology that emphasizes employment growth as the primary driver of long-term population change at the regional scale. The traditional approach to forecasting population uses a cohort-component approach that considers three factors: births, deaths and migration. While birth and death data are readily available and trends are relatively predictable over time, migration tends to be much more difficult to track and forecast as it is heavily influenced by political and economic climates. For the development of the new forecast, AMBAG chose to progress towards a more contemporary approach that places a greater emphasis on employment. The assumption is that the economy is a reliable predictor of population growth.

AMBAG implemented an employment-driven forecast model for the first time in the 2014 forecast and contracted with the Population Reference Bureau (PRB) to test and apply the model again for the 2018 RGF and the 2022 RGF. To ensure the reliability of the population projections, PRB compared the employment-driven model results with results from a cohort-component forecast, a growth trend forecast, and the most recent forecast published by the California Department of Finance (DOF). All four models resulted in similar population growth trends. As a result of these reliability tests, AMBAG and PRB chose to implement the employment-driven model again for the 2022 RGF.

To disaggregate the forecast for each jurisdiction, AMBAG and PRB used the most current data available to update a series of shift-share models and replicate the methodology used in the prior forecast.

## 2022 Regional Growth Forecast

This technical document provides a description of the methodology for the development of the regional growth forecast figures in addition to the methodology for disaggregation of those figures. The regional and subregional forecast figures for population, jobs and housing were accepted by the AMBAG Board of Directors at the November 18, 2020 meeting.

## Summary of the Forecast

The 2022 RGF projects that the region will add 65,500 jobs between 2015 and 2045, for a total of just over 442,800 jobs by 2045. The regional growth rate is slightly slower than nation- and state-level forecasts, reflecting historical growth rates that have tended to be slightly slower than either the state or nation. Furthermore, job growth is expected across most employment sectors. The fastest-growing industries include Site-Based Skilled Trade, Health Care and Social Assistance, and Other Services. Conversely, Retail is expected to be the slowest-growing industry. Notably, while many models for the U.S. predict declines in agricultural job growth, the AMBAG region is experiencing steady agricultural job growth.

This forecast projects that the region's population will grow by approximately 107,500 people between 2015 and 2045, for a total population of just under 869,800 in 2045. This is slightly lower than prior forecasts and follows the slowing growth rates seen at both the state and national level. This revised growth trend also reflects the most current population estimate for the region. As a result of declining fertility, stalled improvements in life expectancy, and falling international migration, the 2020 population estimate was more than 16,000 lower than prior forecasts predicted. In addition to slower growth, the new forecast predicts an older age distribution, with a larger proportion of the population age 65 and older.

An aging population affects the household and housing unit forecasts. While population growth will slow, which reduces future housing demand, older people are more likely to live alone or in small households. This shift offsets the lower population forecast with a slight upward effect on housing demand. The net result is that the region is expected to build just over 42,200 housing units by 2045, for a total of approximately 304,900 units.

## Section 1: Process for Forecast Completion

Following the preparation of the regional forecast figures, AMBAG staff began the process of disaggregating the figures to each of the jurisdictions using historical data to develop a baseline disaggregated forecast. The initial results were a purely quantitative application of the methodology. These preliminary draft disaggregated numbers were presented for discussion purposes at one-on-one meetings held by AMBAG staff with each of the jurisdictions, the Local Agency Formation Commissions,

## 2022 Regional Growth Forecast

the Fort Ord Reuse Authority, the University of California, Santa Cruz and the California State University, Monterey Bay. AMBAG staff also provided materials for these meetings that outlining the data sources and methodology for the regional forecast figures as well as the preliminary draft disaggregated forecast figures. The intent of the first round of meetings was to gather information and data that was then used to make adjustments to the forecast. (See Attachment 1 for a list of meeting dates, times and attendees.)

These preliminary draft disaggregated numbers were adjusted based on information and feedback provided by each jurisdiction. In addition, new data became available. The release of vintage 2020 estimates from the California Department of Finance showed 2019 population approximately 7,000 lower than in the preliminary estimate, although housing estimates were relatively stable. These updates necessitated minor revisions to the regional forecast.

Staff updated the regional growth forecast to reflect the most current information. The entire revised forecast, regional and subregional, was re-circulated for a second round of comments. After the second round of comments were received, AMBAG staff incorporated additional input and prepared a revised draft of the disaggregated forecast figures. Staff circulated the revised population, employment and housing forecast which incorporated additional comments from the Board of Directors. The final draft was accepted for planning purposes only by the AMBAG Board of Directors at its meeting on November 18, 2020. The final growth forecast is scheduled for adoption along with the 2045 Metropolitan Transportation Plan/Sustainable Communities in June 2022.

## Section 2: Development of the Regional Growth Forecast

In spring 2019, AMBAG asked PRB to prepare regional employment, population and housing projections to 2045. This section documents the findings of the work by PRB and includes a summary of the methodology, a description of the projections and an explanation of past, current and projected job growth in the region.

### Summary of the 2022 Regional Growth Forecast

The 2022 RGF projects that the region will add 65,500 jobs between 2015 and 2045, for a total of just over 442,800 jobs by 2045. (See Table 1) The regional growth rate is similar to national forecasts but slightly slower than state-level forecasts. Furthermore, job growth is expected across most employment sectors. The fastest-growing industries include Site-Based Skilled Trade, Health Care and Social Assistance, and Other Services. Conversely, Retail is expected to be the slowest-growing industry. Notably, while many models for the U.S. predict declines in agricultural job growth, the AMBAG region is experiencing steady agricultural job growth.

## 2022 Regional Growth Forecast

This forecast projects that the region's population will grow by approximately 107,500 people between 2015 and 2045, for a total population of just under 869,800 in 2045. (See Table 1) This is slightly lower than prior forecasts and follows the slowing growth rates seen at both the state and national level. This revised growth trend also reflects the most current population estimate for the region. Despite an upward revision to the estimate, the revised DOF population estimate for 2015 was more than 3,000 lower than prior forecasts predicted. As such, an adjustment was made in this forecast of population growth to account for the sharp fall in fertility rates and international migration that occurred during the recession years that have not fully rebounded. In addition to slower growth, the new forecast predicts an older age distribution, with a larger proportion of the population age 65 and older.

An aging population affects the household and housing unit forecasts. While population growth will slow, which reduces future housing demand, older people are more likely to live alone or in small households. This shift offsets the lower population forecast with a slight upward effect on housing demand. The net result is that the region is expected to build just over 42,200 housing units by 2045, for a total of approximately 304,900 units. (See Table 1)

Table 1: Forecast Summary

	2000	2005	2010	2015	2020	2025	2030	2035	2040	2045

*Sources: Jobs data for 2000-2015 are from California Employment Development Department and InfoUSA; population, household, and housing data for years 2000-2020 are from the U.S. Census Bureau and the California Department of Finance. Forecast years were prepared by AMBAG and PRB.*

## Regional Growth Forecast Methodology

As shown in the flow chart below, the forecast uses a model that predicts employment growth using a shift-share model based on local data as well as state and national trends. Population growth is then driven by employment growth. Household and housing growth are driven by population growth, demographic factors and external factors (explained below). This approach was vetted and approved by the AMBAG Board of Directors in 2014 for use in the metropolitan transportation plan, Moving Forward 2035 Monterey Bay. While the methodology for the 2022 RGF remains the same, the models

## 2022 Regional Growth Forecast

have been updated to include current data, a revised base year of 2015 and a new horizon year of 2040.

**Figure 1: Regional Growth Forecast Process**

1. **Employment:** Employment is measured as the number of jobs by place of work. Employment growth by industry is driven by projected national and statewide trends for all industries in the region using a shift-share model.
2. **Population:** Population is the total resident population of the region. Job growth trends influence population growth. The forecast of total population is based on historical trends in the ratio of population to employment in the AMBAG region. Projections of demographic characteristics (i.e., population by age, sex, and race/ethnicity) in the 2022 RGF relied on a proportional approach based on demographic projections from the California Department of Finance (DOF).
3. **Household Population and Group Quarters:** Household population is the population that lives in a housing unit. Group quarters population is the population that lives in a group living arrangement such as a dorm, barracks, correctional institution, or congregate care facility. Demographic factors (e.g., age, sex, race/ethnicity) and external factors (e.g., major group quarters facilities like colleges and universities, correctional facilities, etc.) influence the household population and group quarters population.
4. **Households/Occupied Housing Units:** A household is a person, or group of people, living in a house. Because a household, by definition, occupies a housing unit, households are equivalent to and synonymous with occupied housing units. Household projections are driven by household formation rates. Household formation rates are calculated as the ratio of households divided by the household population. Household formation rates are the inverse of average household size.
5. **Housing Units:** Housing is the total number of housing units, including both occupied and vacant structures. Housing includes primary residences, second homes, accessory dwelling

## 2022 Regional Growth Forecast

units, vacation rentals, farmworker housing, and any other habitable structure—including unauthorized units. The only type of dwelling excluded from the housing inventory is group quarters (dorms, barracks, congregate care, etc.).

Housing projections are driven by the household population projection, demographic characteristics of the household population (age, sex, race/ethnicity), household formation rates, and housing vacancy rates. Vacancy rates are calculated as the share of all units (including vacation rentals, unauthorized dwellings, etc.) that are not currently occupied.

Data sources include the California Department of Finance, California Employment Development Department, the U.S. Bureau of Labor Statistics and the U.S. Census Bureau.

For more information on the definitions of housing and group quarters, see Attachment 4.

### **Step 1: Employment**

The AMBAG region is projected to add 65,500 jobs between 2015 and 2045, for a total of just over 442,800 jobs by 2045. The 2015 base year data were re-benchmarked to reflect revisions to county totals published by the California Employment Development Department, as well as an employer database from InfoUSA, and extensive ground-truthing conducted by AMBAG staff. (See Table 2 and Figure 2.) Employment grew faster in the 2015-2020 time period than had been anticipated in the 2018 RGF, but is expected to return to a slow-growth trend.

## 2022 Regional Growth Forecast

Table 2: Forecast Comparison of Employment

Forecast	2010	2015*	2020	2025	2030	2035	2040	2045
2018 RGF	308,300	337,600	351,800	363,300	374,100	384,800	395,000	N.A.
% Change		10%	4%	3%	3%	3%	3%	N.A.
2022 RGF		377,335	406,280	410,017	418,132	425,845	434,147	442,824
% Change			8%	1%	2%	2%	2%	2%

Sources: Data for years 2010 and 2015 are from the California Employment Development Department. \*In the 2022 RGF, data for 2015 were re-benchmarked using updated estimates from the California Employment Development Department, an employer database InfoUSA, and extensive ground-truthing. Forecast years were prepared by AMBAG and PRB.

Figure 2: AMBAG Region Employment Forecast

Sources: Data for years 2010-2014 are from the California Employment Development Department. In the 2022 RGF, data for 2015 were re-benchmarked using updated estimates from the California Employment Development Department, an employer database InfoUSA, and extensive ground-truthing. Forecast years were prepared by AMBAG and PRB.

Job projections to 2045 were developed for each major NAICS industry category by projecting the AMBAG region share of state job growth based on the analysis of trends in the period from 2005 to 2019. The NAICS industries were then grouped into major industry sectors for the transportation model. Industry categories are described in Attachment 2.

The AMBAG region experienced job growth slower than the state, and similar to the nation between 2000 and 2019. (See Figure 3.) The region is projected to experience job growth at a slightly slower rate than the state and nation. The primary reason for this below-average job growth is the region's below-

## 2022 Regional Growth Forecast

average concentration in fast-growing sectors such as information and professional services. The region also has a below-average exposure to growth in foreign trade.

**Figure 3: Employment Change**

*Sources: Data for years 2000-2015 from the U.S. Bureau of Labor Statistics and California Employment Development Department. Forecast years were prepared by AMBAG and PRB with input from U.S. Bureau of Labor Statistics, Employment by Major Industry Sector: 2014-2024; California Department of Transportation, California County-Level Economic Forecast 2014-2040, September 2014; and from the California Employment Development Department, Industry Employment Projections.*

Positive growth factors include above-average performance relative to state trends in tourism and agriculture. Agriculture has shown strong growth for several years, and new crops such as cannabis as well as new investments in processing facilities, portend that the industry will continue to grow. However, any job growth due to new crops may be mitigated by losses due to increased mechanization in agriculture and agricultural processing.

### Method for Producing the Employment Forecast

The AMBAG region job projections were developed using three guiding principles:

1. The AMBAG region projections were based on projections of job growth in the nation and state. The national and state projections provide the **pool of job opportunities** and the AMBAG region projections reflect historical trends in the **share** of national and state job growth that will locate in the AMBAG region.

## 2022 Regional Growth Forecast

2. The AMBAG region **share** of national and state job growth is determined by the industry composition of job growth and the projected share of job growth locating in the AMBAG region. If national and state job growth is concentrated in sectors where the AMBAG region has a competitive advantage, the region's projected job growth will be higher than if national and state job growth is concentrated in sectors where the region has a below-average share of jobs and a relatively poor competitive position.
3. The analysis of competitive advantage is focused on sectors in the AMBAG region **economic base**. The region's economic base consists of those sectors that sell a high proportion of goods and services to customers outside the region. They export goods and services to customers in world and national markets and markets throughout California. Key examples of economic base sectors in the AMBAG region are agriculture and tourism. The UC Santa Cruz campus and state prison are also examples of activities that do not primarily serve local residents.

*U.S. and California Job Growth to 2045*

The starting point for the AMBAG projections is an examination of future U.S. and California job growth for total jobs and major industry sectors. The U.S. job growth projections are based on the most recent forecast from the U.S. Bureau of Labor Statistics and an extrapolation of growth trends to 2045. California job growth projections are based on an industry-level forecast published by the California Department of Transportation, as well as data from the California Employment Development Department and PRB.

The California industry projections identify the structure of job growth as an input to AMBAG region job projections. The resulting projections of job growth are shown below.

The nation is expected to add 41 million jobs between 2015 and 2045 for an increase of 27 percent. Growth, nationwide, is expected to be fairly constant throughout the forecast period. The state of California is projected to experience job growth that is slightly faster than the nation's job growth in the early years of the forecast and to slow down to a rate more similar to the national growth rate by 2045.

The state is projected to see a 26 percent increase in total jobs between 2015 and 2045. The pattern of California industry job growth is shown below and was used in developing AMBAG region job projections. (See Table 3)

## 2022 Regional Growth Forecast

**Table 3: California Jobs by Major Industry (000s)**

	2010	2015	2020	2045	Avg. Annual Growth Rate		
					2010-2015	2015-2020	2015-2045
Agriculture	382.8	422.3	426.8	433.1	2.0%	0.2%	0.5%
Mining	24.6	26.4	22.8	23.8	1.4%	-2.9%	-2.1%
Construction	560.0	732.1	892.9	996.2	5.5%	4.1%	6.4%
Manufacturing	1,247.9	1,303.0	1,340.4	1,439.2	0.9%	0.6%	2.0%
Wholesale	629.7	691.0	699.2	789.8	1.9%	0.2%	2.7%
Retail	1,516.5	1,660.1	1,683.3	1,812.5	1.8%	0.3%	1.8%
Transp., Warehousing, Utilities	466.9	557.8	682.2	717.9	3.6%	4.1%	5.2%
Information	428.4	488.6	562.0	714.0	2.7%	2.8%	7.9%
Financial Serv.	758.8	800.8	840.1	1,096.7	1.1%	1.0%	6.5%
Prof. & Business Serv.	1,224.1	1,431.6	1,591.7	1,861.8	3.2%	2.1%	5.4%
Educ. & Health Serv.	2,993.9	3,526.1	3,988.6	4,792.4	3.3%	2.5%	6.3%
Leisure & Hospitality	1,500.8	1,828.3	2,056.8	2,348.2	4.0%	2.4%	5.1%
Other services (excl. gov't)	483.6	543.6	583.3	797.4	2.4%	1.4%	8.0%
Government	2,448.4	2,463.0	2,636.6	2,959.3	0.1%	1.4%	3.7%
Self Employed	1,192.6	1,180.9	1,275.7	1,519.6	-0.2%	1.6%	5.2%
<b>Total Jobs</b>	<b>15,859.0</b>	<b>17,655.6</b>	<b>19,282.4</b>	<b>22,301.7</b>	<b>2.2%</b>	<b>1.8%</b>	<b>4.8%</b>

*Sources: Data for years 2005, 2010 and 2015 from the Employment Development Department. Forecast years were prepared by PRB with input from California Department of Transportation, California County-Level Economic Forecast 2018-2050, September 2019 and from the California Employment Development Department, California Industry Employment Projections.*

The projections show substantial differences in the expected growth rate among industries between 2015 and 2045 and these differences tell a story about where job growth is expected and where job levels will remain flat or decline. These differences directly influenced the AMBAG region job projections described below.

It is important to note that the statewide projections listed above were completed before the start of the coronavirus pandemic. The net result is unknown at this time, and projections will be updated as new information becomes available. AMBAG will begin the next update to the Regional Growth Forecast will begin in 2023.

2022 Regional Growth Forecast

**The AMBAG Region Economy and Job Growth**

The previous section provided an overview of the current trends in the California economy. As previously noted the AMBAG region’s job projections are based on an analysis of the regional economy and its relationship to the growth forecasted for California. The national and state projections provide the **pool of job opportunities** and the AMBAG region forecast reflects judgments about the **share** of national and state job growth that will locate in the AMBAG region. What follows is a description of the current structure of the regional economy as well as the resulting job projections based on the region’s share of industries.

The database used for analysis and projections consists of annual industry employment data from 1990 through 2019, from the California Employment Development Department. for each of the three counties in the region and added together to produce an AMBAG region jobs database.

In addition to the historical time-series, AMBAG re-benchmarked the 2015 employment data to more accurately reflect local employment, and grouped the data to eleven categories for modeling purposes. This process is described in more detail in the “Sub-County Employment Database and Re-benchmarking” section, below. Industry definitions are included in Attachment 2.

The largest sectors are Other Services (including hotels, restaurants, and personal services), Health Care and Social Assistance, and Retail. (See Figure 4.)

**Figure 4: Jobs by Industry Sector in 2015, AMBAG Region**

## 2022 Regional Growth Forecast

*Sources: Data from the California Employment Development Department, InfoUSA, and AMBAG.*

The AMBAG regional economy has an industry structure that is quite different in some ways than the statewide structure or the industry structure in regions like Southern California or the San Francisco Bay Area. One difference is the large share of jobs in Agriculture. Nineteen percent of total jobs in the AMBAG region are in Agriculture compared to just over two percent statewide. Other sectors with above average shares in the region include Public, Other Services, and Self Employed. Conversely, the AMBAG region has a below average share of jobs in the fast-growing, high wage Financial and Professional Services sectors.

### **AMBAG Region Forecast Job Trends, by Industry**

The AMBAG region is expected to have moderate job growth between 2015 and 2040.

**Table 4: AMBAG Region Jobs by Major Industry (000s)**

	2015	2020	2025	2030	2035	2040	2045	Avg. Annual Growth Rate

<b>Total</b>	377,300	406,300	410,000	418,100	425,800	434,100	442,800	1.5%	0.4%

*Sources: Data for years 2015 from the California Employment Development Department, InfoUSA, and AMBAG. Forecast years were prepared by AMBAG and PRB.*

*Note: Parts may not sum to total due to independent rounding.*

The industry-level trends in the AMBAG Region are as follows:

- Agricultural job growth has been strong for the past 10 years, and while the rate of growth is expected to slow, the region's agricultural industry will still grow faster than state or national projections.
- The region lost Manufacturing jobs during the recession, but recent years have seen a turnaround. Growth is expected to be slow but steady in future years.

## 2022 Regional Growth Forecast

- Site-based Skilled Trade (which includes construction) saw steep job losses during the recession and a bounce-back through 2019. Future growth is expected to be moderate.
- The Wholesale and Retail sectors both lost jobs in recession years, and retail has continued to decline. Growth is expected to remain low through the forecast.
- Financial and Professional Services is expected to grow at a moderate rate.
- Education has grown rapidly in recent years, but growth will likely slow as population growth slows.
- Healthcare and Social Assistance has seen steady growth, even in recession years. This is expected to continue as the population ages and demand for health services increases.
- Other Services (including hotels, restaurants, and personal services) lost jobs in the AMBAG region during the recession, but growth rebounded between 2010 and 2015. Growth is expected to be moderate in the future.
- The Public sector, locally, lost jobs between 2008 and 2013 as a result of the recession. Those losses began to reverse in 2014, and the sector is expected to see modest growth in the future.
- Self-employment tends to be counter-cyclical as people who lose their wage-and-salary job during a recession may turn to self-employment. Growth forecasts are based primarily on population growth.

## Step 2: Population

The region is projected to add approximately 107,500 people between 2015 and 2045, for an increase of 14 percent. The 2045 projected regional population of 869,776 is lower than the 883,300 residents projected for year 2040 in the 2018 RGF. (See Table 5 and Figure 6) This lower population forecast reflects slower growth than anticipated since the 2010 Census due to record low birth rates, stalled improvements in life expectancy, and lower migration rates. This slower growth in population is possible, despite faster growth in employment, due to changing unemployment and labor force participation rates.

**Table 5: Comparison of Forecasts for Population**

Forecast	2010	2015	2020	2025	2030	2035	2040	2045
<b>2018 RGF</b>	732,708	762,676	791,600	816,900	840,100	862,200	883,300	N.A.
<b>% Change</b>		4%	4%	3%	3%	3%	2%	N.A.
<b>2022 RGF</b>	732,708	762,241	774,729	800,726	824,992	842,189	857,828	869,776
<b>% Change</b>		4%	2%	3%	3%	2%	2%	1%

*Sources: Data for years 2010-2020 are from the California Department of Finance. Forecast years were prepared by AMBAG and PRB.*

2022 Regional Growth Forecast

Figure 5: AMBAG Region Population Forecast

Sources: Data for years 1990-2020 are from the California Department of Finance. Forecast years were prepared by AMBAG and PRB.

Despite the lower population forecast, it is expected that AMBAG will continue to see population and housing growth associated with job growth outside of the region. In particular, job growth in Silicon Valley, combined with high housing prices, is expected to lead to an increase in the number of commuters to Bay Area jobs that live in the AMBAG region.

Method for Producing the Population Forecast

In preparing for this forecast, PRB tested a variety of methods for the population forecast, each of which produced similar results. (Findings are summarized in Attachment 3.) As a result of this review, PRB and AMBAG staff determined that the employment-driven population growth forecast model used in the 2014 RGF was suitable for the 2018 RGF.

Benchmark Population

All population projections are benchmarked to the 2010 Census counts which include people whose primary residence on “Census Day” (April 1, 2010) is within the region, regardless of citizenship status. It is recognized that the AMBAG region is home to a sizeable seasonal population (seasonal workers, who often work in agricultural occupations, and their families). Seasonal worker populations have

## 2022 Regional Growth Forecast

historically been found to be “hard to count” (HTC) in official statistics.<sup>1</sup> In an encouraging development, the 2010 Census was more effective than prior decennial census efforts in reaching, and enumerating, HTC areas. Specifically, “Census 2010 coverage of households in the HTC tracts in the San Joaquin Valley and Central Coast counties... was significantly improved from previous decennials,” but some undercount remained a problem.<sup>2</sup>

The timing of data collection has also historically been a challenge for counting seasonal workers in the AMBAG region. Migratory workers are counted based on their location on Census Day. If the agricultural work cycle is in a lull in March and April, but ramps up at other times of the year, the worker population may be lower on Census Day than it is at other times of the year. However, it has been observed through informal surveys (i.e., for the AMBAG Regional Agricultural Vanpool Feasibility Study) that the seasonal population in the AMBAG region has been moving towards a trend of year-round residence, particularly with regard to agricultural jobs.

Given these two trends – better enumeration of HTC populations and a trend toward year-round residence – the seasonal population is increasingly likely to be counted in the decennial Census and in California Department of Finance demographic estimates. That said, seasonal workers who were not present on Census Day would not have been counted in the AMBAG region, and undercount remains a problem for seasonal populations, nationwide. Thus, to the extent that seasonal workers are present and counted in official statistics, they are also included in this forecast.

The AMBAG region population projections were benchmarked against prior decennial Census and employment data, and derived by anticipating that the regional population to job ratio will move in line with the statewide trend as it has in the past.

### *U.S., California and AMBAG Region Demographic and Economic Trends to 2045*

The AMBAG region has an above-average share of residents who live in group quarters and are not tied to the regional job market. This trend has continued since 1990 although the mix of group quarters residents has changed. (See Figures 6 and 7.) Changes in group quarters population, such as growth at the region’s universities, will play a role in regional growth through 2045.

2022 Regional Growth Forecast

Figure 6: Group Quarters as a Percent of Population

Sources: U.S. Census Bureau, California Department of Finance

In 1990 there was a substantial military group quarters presence around the Fort Ord base. Since then the military population has declined due to the closure of the base, but that group quarters population has been offset by an increase at colleges (primarily UC Santa Cruz and CSU Monterey Bay) and an increase in the state prison population. In future years it will be important to continue watching the development and growth of military institutions in the region. There is still a strong military and naval presence in Monterey County including the Presidio area as well as Fort Hunter Liggett in the southern portion of the County.<sup>3</sup>

<sup>3</sup> While Fort Hunter Liggett has a small permanent population, they are a large training facility and host a substantial amount of trainees every year. Not only will it be important to follow the FHL plans for expansion from a population perspective, but it will also be important to consider the presence of the FHL in transportation planning given the Fort's heavy reliance on Highway 101.

2022 Regional Growth Forecast

Figure 7: AMBAG Group Quarters Population in 2010

Source: U.S. Census Bureau, Census 2010

The AMBAG region, the state, and the nation all have about 2 residents per job, and that is expected to continue to 2045.

AMBAG residents commute to jobs outside the region, principally to jobs in Santa Clara County. This net out-commuting means there are residents in the region not connected to AMBAG region job growth. Net out-commuting surged between 1990 and 2000 as the “dot.com boom” pushed Silicon Valley (Santa Clara County) job levels higher, and has continued to rise as people to search for cheaper housing in portions of the AMBAG region. (See Figure 8.)

## 2022 Regional Growth Forecast

**Figure 8: Net Out-Commuting from AMBAG Region**

Sources: 1990 & 2000 - *Census Journey to Work* and 2011-2015 - *American Community Survey Special Tabulations for the Census Transportation Planning Package*.

**AMBAG Region Forecast Population Trends**

As described above (see Table 5), the region is projected to add approximately 2,700 residents per year between 2015 and 2045. This is less than the average of just under 8,900 between 1990 and 2000 and above the recession-affected growth of 2,200 between 2000 and 2010. Recent growth from 2015-2020 has averaged 2,500 per year, close to the projected long-term growth rate.

**Step 3: Housing and Households**

The region is projected to add approximately 42,200 housing units by 2045, for a total of approximately 304,900 for an increase of 16 percent. The 2045 projected regional housing stock of 304,900 is slightly higher than the 305,293 housing units projected for year 2040 in the 2018 RGF, reflecting slower population growth.

**Table 6: Comparison of Forecasts for Housing**

Forecast	2010	2015	2020	2025	2030	2035	2040	2045

2022 Regional Growth Forecast

Sources: Data for years 2010-2020 are from the California Department of Finance. Forecast years were prepared by AMBAG and PRB.

Figure 9: AMBAG Region Housing Forecast

Sources: Data for 1990-2020 from the California Department of Finance. Forecast years were prepared by AMBAG and PRB.

Method for Producing the Housing Forecast

The housing forecast begins with a household forecast, and the household forecast is driven by demographic factors such as the size and structure of the population. Demographic factors (e.g., gender, age, and race/ethnicity) and external factors (e.g., major group quarters facilities like colleges and universities, correctional facilities, etc.) influence household population and household formation rates (i.e., the number of people per household). Household formation rates predict future demand for housing. That predicted demand, combined with expected vacancy rates, drives the forecast for housing growth.

AMBAG Region Forecast Housing Trends

As described above (see Table 5), the region is projected to add approximately 2,700 residents per year between 2015 and 2045. Taking average household size and vacancy rates into account, the resulting housing growth is expected to be just over 1,000 per year between 2015 and 2045. This is similar to the recent growth of 1,000 housing units per year between 2000 and 2015.

It is worth noting that several jurisdictions in the AMBAG region have historically had relatively high vacancy rates, reflecting a mix of vacation rentals and second homes, particularly in coastal

## 2022 Regional Growth Forecast

communities. In recent years, there is some evidence that more homeowners may be participating in the vacation rental market via platforms such as Airbnb and VRBO. It is unclear whether these new services will result in higher vacancy rates as more housing units become primarily vacation rentals or lower vacancy rates as short-term rental units shift demand away from units that are intended to be available for rental most (or all) of the year. AMBAG will continue to monitor this trend for future forecasts.

## Section 3: Development of the Subregional Forecast

Following the preparation of the regional forecast figures, AMBAG staff began the process of disaggregating the figures to the county and city level using historical data. This section summarizes that process and the results.

### Summary of the 2022 Subregional Forecast

The 2022 RGF projects that the region will add about 65,500 jobs between 2015 and 2045, for a total of just over 442,800 jobs by 2045. Of that growth, 58 percent (approximately 38,200 jobs) is expected to be in Monterey County, 7 percent (approximately 4,500 jobs) is expected to be in San Benito County and 35 percent (approximately 22,800 jobs) is expected to be in Santa Cruz County.

This forecast projects that the region's population will grow by approximately 107,500 people between 2015 and 2045, for a total population of just under 869,800 in 2045. Of that growth, 57 percent (approximately 61,100 people) is expected to be in Monterey County, 23 percent (approximately 25,200 people) is expected to be in San Benito County and 20 percent (approximately 21,200 people) is expected to be in Santa Cruz County.

To house the region's expected population growth, this forecast shows an increase of just over 42,200 housing units by 2045, for a total of approximately 304,900 units. Of that growth, 62 percent (approximately 26,200 houses) is expected to be in Monterey County, 18 percent (approximately 7,500 houses) is expected to be in San Benito County and 20 percent (approximately 8,600 houses) is expected to be in Santa Cruz County. Housing growth rates do not exactly parallel population growth rates because of local variations in average household size and vacancy rate, and because some population (e.g., at UCSC and CSUMB) is expected to be housed in group quarters facilities.

Details of the population, housing, and job growth forecasts for each jurisdiction, as well as population and housing forecasts for the two universities, can be found in Attachment 5.

## 2022 Regional Growth Forecast

## Subregional Allocation Methodology

Unlike the regional forecast, in which employment growth drives population and housing growth, the employment forecast is separate from the population and housing forecast in the subregional allocation. This separation reflects differing economic and demographic forces at the regional and local levels.

**Figure 10: Subregional Allocation Process**

1. **Employment trends:** Employment is measured as the number of jobs by place of work. For the county-level forecast, employment growth by industry is driven by historical trends (i.e., shift-share model). Total growth across the three counties is constrained by the region-level forecast. For each jurisdiction (cities and unincorporated balance of county), employment growth by industry is a constant share of the jurisdiction's parent county's growth in that industry.
2. **Population trends:** Population is the total resident population of the region. The jurisdiction level forecast is driven by three factors:
  - a. Historical trends (i.e., shift-share model)
  - b. Anticipated future developments such as housing projects under development that are likely to be occupied within the forecast horizon
  - c. External factors (e.g., universities, military, correctional facilities)

## 2022 Regional Growth Forecast

Each county's population forecast is a sum of the jurisdiction-level forecasts. All levels (county, city, unincorporated area) are constrained by the region-level forecast.

3. Household Population and Group Quarters: Household population is the population that lives in a housing unit. Group quarters population is the population that lives in a group living arrangement such as a dorm, barracks, correctional institution, or congregate care facility. Demographic factors (e.g., age, race/ethnicity) and external factors (e.g., major group quarters facilities like colleges and universities, correctional facilities, etc.) influence the household population and household formation rates (i.e., the number of people per household).
4. Households/Occupied Housing Units: A household is a person, or group of people, living in a house. Because a household, by definition, occupies a housing unit, households are equivalent to and synonymous with occupied housing units.  
Household projections are driven by household formation rates. Household formation rates are calculated as the ratio of households divided by the household population. Household formation rates are the inverse of average household size.
5. Housing Units: Housing is the total number of housing units, including both occupied and vacant structures. Housing includes primary residences, second homes, accessory dwelling units, vacation rentals, farmworker housing, and any other habitable structure—including unauthorized units. The only type of dwelling excluded from the housing inventory is group quarters (dorms, barracks, congregate care, etc.).  
Housing projections are driven by the household population projection, demographic characteristics of the household population (age, sex, race/ethnicity), household formation rates, and housing vacancy rates. Vacancy rates are calculated as the share of all units (including vacation rentals, unauthorized dwellings, etc.) that are not currently occupied.

Data sources include the California Department of Finance, the California Employment Development Department, InfoUSA, and the U.S. Census Bureau.

For more information on the definitions of housing and group quarters, see Attachment 4.

This process resulted in draft estimates at the jurisdictional level that were used for discussion purposes with staff at each of the cities and counties within the region. In addition to the cities and counties, staff met with the Local Agency Formation Commissions (LAFCOs) for each county, the Fort Ord Reuse Authority, the University of California, Santa Cruz (UCSC) and California State University, Monterey Bay (CSUMB) to discuss the results. Adjustments were made to the forecast based on these conversations to incorporate growth on the basis of planned developments, specific and General Plan research and economic development plans. The process of revision and meeting with local jurisdictions one-on-one was repeated several times to reach a consensus on the forecast.

2022 Regional Growth Forecast

Step 1: Employment

The 2022 RGF projects that the region will add about 65,500 jobs between 2015 and 2045, for a total of just over 442,800 jobs by 2045. Of that growth, 58 percent (approximately 38,200 jobs) is expected to be in Monterey County, 7 percent (approximately 4,500 jobs) is expected to be in San Benito County and 35 percent (approximately 22,800 jobs) is expected to be in Santa Cruz County.

Figure 11: Employment by County 2015-2045

Sources: California Employment Development Department, InfoUSA, AMBAG, forecast by PRB and AMBAG.

Method for Producing the County and Sub-County Employment Forecast

The subregional employment forecast incorporated a two-step process: a county-level forecast and a jurisdiction-level allocation.

In order to disaggregate the tri-county regional industry employment forecast by county, AMBAG staff selected what is known as a Classical Shift-Share model. The Classical Shift-Share formula is similar to the Implicit Shift-Share formula used to disaggregate the population forecast, except that it is comprised of three mathematical functions rather than two. In this case, they are referred to as the regional share, industry mix and competitive shift functions. The regional share function estimates what employment growth in a certain industry would look like in the local area (i.e., county) if it were to grow at the same rate as the total all-industry employment in the region as a whole. The second industry mix function then adjusts for the difference in the rate of employment growth in a certain industry, compared to all industry employment. The industry mix function is calculated using regional

## 2022 Regional Growth Forecast

employment values. The third function, known as the competitive shift, adjusts the estimate to account for faster or slower industry employment growth in the county, compared to the region.

**Figure 12: Classical Shift-Share Equation**

$$E_i^{t+n} = E_i^t \left[ \frac{R_A^{t+n}}{R_A^t} + \left( \frac{R_i^{t+n}}{R_i^t} - \frac{R_A^{t+n}}{R_A^t} \right) + \alpha \left( \frac{E_i^t}{E_i^{t-m}} - \frac{R_i^t}{R_i^{t-m}} \right) \right]$$

$E$  = local Value     $R$  = Regional Value  
 $i$  = industry     $A$  = All industries

### ***Sub-County Employment Database and Re-benchmarking***

To produce the subregional employment component of the forecast and to support transportation modeling, AMBAG created an address-level database for all employers in the AMBAG region in 2015. The database combined industry employment data from the California Employment Development Department (EDD) with employer data from InfoUSA. The InfoUSA data are derived from dozens of sources including but not limited to postal records, white pages listings, new business registrations, utility connections, real estate data (deeds & assessments) and industry directories. The database is then verified and supplemented with regular phone surveys. InfoUSA database is used by many other regional Councils of Governments to conduct forecast work and is a reputable source of data.

Staff compared records from EDD with those from InfoUSA. Where both sources matched, one record was retained, unedited. Where records differed, staff conducted extensive research (using AMBAG’s land use inventory, web-based investigation, and field research) to determine the proper industry code and employment level for the record and retained the most accurate record (typically the higher reported number). As a result of the editing and reconciliation process, the address-level inventory differs from EDD industry totals.

While there are differences across all industries, edits to agricultural records were extensive. Staff review of address-level records showed that many establishments listed as “agriculture” by EDD are, in the AMBAG region, engaged in food processing (manufacturing), storage (warehousing), or retail (farm stands). Agricultural recategorization is described in more detail in Attachment 2.

It is also important to note that the AMBAG estimate of agricultural jobs differs from estimates of the agricultural workforce (91,433 in 2016) described in “Farmworker Housing Study and Action Plan for Salinas Valley and Pajaro Valley.” The reasons for this difference are both temporal and definitional. The industry estimates are annual-average estimates of jobs (a job is a paid position at a company) for 2015. The Farmworker Housing Study figures are 2016 estimates of all workers who were ever employed during the year, including those who worked part-time or part-year. If a company has high turnover or seasonal work, that company’s number of workers (all year) would be higher than their average number of jobs. For example, if a company typically has 10 paid positions, but in peak season brings on another 10 for three months, the annual average number of jobs is 12.5 (10 x (9/12months) +

## 2022 Regional Growth Forecast

20 x (3/12months) = 12.5/month) but there were 20 unique workers at peak (original 10 plus additional 10).

Thus, in this case, the farmworker study estimates are higher than jobs estimates for three key reasons:

- Agricultural employment grew slightly between 2015 and 2016.
- Worker estimates take peak seasonal employment into account, while EDD industry estimates are annual averages.
- Some companies that identify as agricultural are more accurately classified as food processing (manufacturing), storage (warehousing), or retail (farm stands).

### *Sub-County Disaggregation Method for Employment*

The address-level database, described above, was used to calculate the share of employment for each industry in each jurisdiction in 2015. This percent share was then carried forward to future years in order to calculate the number of jobs located in each jurisdiction by industry. While the County level totals use the Classical Shift-Share method as described above, the sub-county level forecast is a constant share approach. However, because the sub-county level forecasts are based on the County totals by industry the Classical Shift-Share method does influence the sub-county trends.

A preliminary draft forecast was distributed to planning staff at each jurisdiction. AMBAG staff held one-on-one meetings to gather comments and additional information from planning staff at each jurisdiction. (See Attachment 1 for a list of meeting dates, times, locations and attendees.) Staff then used economic studies, entitled development, the establishment of enterprise zones and other information from local planners to supplement the employment assumptions at the jurisdictional level. These comments and additional pieces of information were incorporated into the final forecast.

## Step 2: Population

This forecast projects that the region's population will grow by approximately 107,500 people between 2015 and 2045, for a total population of just under 869,800 in 2045. Of that growth, 57 percent (approximately 61,100 people) is expected to be in Monterey County, 23 percent (approximately 25,200 people) is expected to be in San Benito County and 20 percent (approximately 21,200 people) is expected to be in Santa Cruz County.

2022 Regional Growth Forecast

Figure 13: Population in Monterey, San Benito and Santa Cruz Counties 1940-2045

Sources: Data for years 1940-2020 are from the U.S. Census Bureau and California Department of Finance. Forecast years were prepared by AMBAG and PRB.

## 2022 Regional Growth Forecast

**Method for Producing the County and Sub-County Population Forecast**

In order to disaggregate the tri-county regional population forecast, PRB and AMBAG implemented the Implicit Shift-Share method. This particular technique was chosen because it provides a relatively simple, yet rigorous, method for estimating the future geographic distribution of the regional population based on historic estimates of local and regional population growth.

The Implicit Shift-Share formula is comprised of two distinct mathematical functions. These are sometimes known as the regional share and the local shift. The regional share function calculates what the total population growth in the local area (i.e., a city or county) would be if that area were to grow at the same rate as the region as a whole. The second function then adjusts for historic changes in the local area's share of the total regional population. Combined with an accurate estimate of the size of the base population obtained from the 2010 Decennial Census, the regional share and local shift functions provide a reasonable estimate of the future local area population, taking into account past changes in the percentage share of the regional population. Historical data are from the Department of Finance. The Department of Finance does benchmark their historical estimates to the Decennial Census for 1990, 2000 and 2010.<sup>4</sup>

**Figure 14: Implicit Shift-Share Equation**

$$E^{t+n} = E^t \left( \frac{R^{t+n}}{R^t} \right) + \alpha R^{t+n} \left( \frac{E^t}{R^t} - \frac{E^{t-m}}{R^{t-m}} \right) \quad \begin{array}{l} E = \text{Local Value} \\ R = \text{Regional Value} \end{array}$$

To produce jurisdiction-level forecast, AMBAG and PRB compiled a database of historical population by jurisdiction. This database included information on population growth (or decline) as well as details for "special" populations (e.g., college students, military personnel, prisoners). (Special populations are described in more detail in the section "Adjustments for Special Populations," below.)

AMBAG and PRB compiled historical data<sup>5</sup> to track trends in, and relied upon institutional/facility plans to produce the population forecast for the following areas:

- Marina:
  - Fort Ord (portion)

  - UCSC

AMBAG and PRB then applied the implicit shift-share methodology to the balance of population in each jurisdiction to produce a draft of the first forecast increment. The benchmark period for the shift-share model was 2010-2015, and the model was applied to produce the draft forecast.

Forecast years, for this initial draft, presumed that each jurisdiction maintained a constant share of the region's population. This approach, using shift-share for the first increment, and constant-share thereafter, was implemented in the 2014 RGF and 2018 RGF to ensure that jurisdictions that experienced population loss during the benchmark period would not continue to decline. This forecast assumption is reasonable given that any jurisdiction may experience a period of temporary population decline, even when the long-term trend has been stability or growth.

Further initial adjustments were made to reflect population growth associated with housing under construction or in the permit pipeline.

AMBAG staff then met with representatives from each jurisdiction to ground truth the forecast with respect to anticipated future growth and development in the pipeline. (See Attachment 1 for a full list of meetings.)

### Step 3: Housing

To house the region's expected population growth, this forecast shows an increase of just over 42,200 housing units by 2045, for a total of approximately 304,900 units. Of that growth, 62 percent (approximately 26,200 houses) is expected to be in Monterey County, 18 percent (approximately 7,500 houses) is expected to be in San Benito County and 20 percent (approximately 8,600 houses) is expected to be in Santa Cruz County. Housing growth rates do not exactly parallel population growth rates because of local variations in average household size and vacancy rate, and because some population (e.g., at UCSC and CSUMB) is expected to be housed in group quarters facilities.

2022 Regional Growth Forecast

Method for Producing the County and Sub-County Housing Forecast

In order to convert county level population forecast figures into the forecast of housing units, staff created a set of demographic profiles that describe the age, sex, race, and ethnicity characteristics of the future population. The basis for the demographic profiles is a set of detailed population projections developed by the California Department of Finance in 2019.<sup>6</sup> The profiles were developed by calculating the share of total projected population within each county that may be attributed to each age, sex, race and ethnic category. The population age distribution for the AMBAG Region is shown in Figure 15 below. County-specific demographic patterns from the Department of Finance forecast were applied to AMBAG-projected total population for each county.

Figure 15: Population Size and Age Structure of AMBAG Region in 2015 and 2045

Source: 2015 data from the California Department of Finance, 2045 data from AMBAG and PRB.

<sup>6</sup> In January 2020, DOF published State and County Population Projections. These have not been re-benchmarked to the 2020 Census.

## 2022 Regional Growth Forecast

The first step toward translating the county demographic projections into forecasted housing was to subtract the group quarters population from the total population. (For an explanation of Group Quarters, see Attachment 4.) Staff calculated a set of group quarters rates by dividing the group quarters population in each age, sex, race and ethnic category as provided by the 2010 Census<sup>7</sup> by the total 2010 age, sex, race and ethnic population in each county. The team then updated these 2010 rates to reflect 2020 population and group quarters population estimates from the Department of Finance. In order to estimate the group quarters population in each county, staff multiplied the group quarters rates within each category by the total population in each category. This population was then removed from the total population to provide an estimate of the number of people living in households, by demographic subgroup.

Next, to generate estimates of the total number of households in each county, staff calculated a set of head of householder rates. These also are frequently referred to as “headship rates” or “household formation rates.” As with the group quarters rates, these are derived from 2010 Census data.<sup>8</sup> To generate the head of householder rates, staff divided the 2010 estimates of the number of individuals within each age, race and ethnic category who were reported to be the head of a household by the total number of individuals within each age, race, and ethnic population category less the group quarters population.<sup>9</sup> By multiplying the base-year household population estimates for each category by the head of householder rates, staff derived a new set of head of household estimates, which were controlled to published data from the California Department of Finance. Note that for each head of household there is, by definition, one household. Thus, by adding up all of the head of householders, the staff was able to generate estimates of the total number of households within each county.<sup>10</sup>

Finally, vacant units were added to the total number of households in order to obtain an estimate of housing units. Vacancy data was obtained from the U.S. Census Bureau for 1990, 2000 and 2010, and

---

<sup>7</sup> U.S. Census Bureau, 2010 Decennial Census, Summary File 1, Table QTP-12.

<sup>8</sup> U.S. Census Bureau, 2010 Decennial Census, Summary File 2, Table PCT-12.

<sup>9</sup> The householders data for the "Some other race alone, not Hispanic or Latino" and "Native Hawaiian and Other Pacific Islander alone, not Hispanic or Latino" categories of population in San Benito County was suppressed because there was not a population of greater than 100. For these ethnic categories the regional rate was used instead given the lack of data on this population.

<sup>10</sup> The Census does include "second dwelling units" or accessory units within their counts of households if the unit has its own bathroom and kitchen facilities. However, there are likely illegal "granny units" that are not counted through this process.

## 2022 Regional Growth Forecast

from the Department of Finance for intercensal years.<sup>11</sup> To better understand what a normal housing vacancy rate might be, staff reviewed historical data on residential vacancy for the last two decades. Once a vacancy rate was established, this was used to calculate the total number of vacant housing units (the number of occupied units being equal to the number of households). By adding together estimates of the total number of vacant and occupied housing units, staff derived estimates of the total housing stock within each county.

### Forecasting Sub-County Population, Households and Housing Units

To derive a city-level forecast of population, household population, households, and housing units, staff used a simplified version of the methodology described above. The MPO is not required to develop detailed demographic characteristics for city-level estimates. As such the household and housing unit conversion was done using aggregate group quarters and household formation rates for each city, as reported in the 2010 Census and with trends through 2020 from the Department of Finance.<sup>12</sup> Vacancy rates were derived from a 30-year average as reported by the Department of Finance.<sup>13</sup> The Department of Finance does benchmark their estimates to the decennial Census.

Some of the jurisdictions within the region show a declining population over the last 10 to 20 years. Because the Implicit Shift-Share method was used for projecting 2025 population and the method reflects the change in population over time, for those jurisdictions that have experienced population decline there would be a continuation of that decline reflected for the year 2025. Instead of showing a decline, the 2025 share of the regional population calculated for these jurisdictions was held constant. This has the effect of showing an increase in population to 2025 even if recent trends were toward population decline. There is too little information to know whether short-term declines will continue, so instead of assuming continual decline, growth was held at a constant. AMBAG will continue to monitor these trends.

## Section 4: Demographic History of the AMBAG Region

The AMBAG region grew at a faster rate than California in the 1960s and 1970s and grew at approximately the same rate as the state in the 1980s (24% in AMBAG region, 26% statewide). Both the state and the AMBAG region grew at the same rate in the 1990s (14%). The AMBAG region's growth fell far below the statewide average between 2000 and 2010, increasing by only three percent while the state grew by 10 percent. From 2010 to 2020 both the state and the AMBAG region grew at similar rates (7% and 6%, respectively).

### AMBAG Region: 1970 to 1990

Between 1970 and 1990 the AMBAG region population grew by more than 110,000 each decade, increasing by 29 percent from 1970 to 1980 and by 24 percent from 1980 to 1990. Growth slowed in the 1990s. The slowdown can be attributed, in part, to the closure of Fort Ord in 1994, which is described in more detail in the "Adjustments" section, below. These population losses greatly affected the growth rates of the communities of Marina and Seaside prior to 2000. Concurrent civilian job losses affected population growth in the AMBAG region more broadly. The AMBAG region population grew by 88,500 (14%) between 1990 and 2000.

### AMBAG Region: 2000 to 2010

In the following decade, population growth slowed considerably. The AMBAG region population grew by only 22,100 (3%) during the decade between 2000 and 2010. This pattern of slowing population growth reflects an aging population and lower net migration into the AMBAG region. Lowered net migration could be due to several factors including but not limited to water resource constraints, the after-effects of the closure of Fort Ord, as well as increasing housing costs followed by a major recession.

### AMBAG Region: 2010 to 2020

In the five years since the decennial census, population growth began to return to historical levels. The AMBAG region population grew by just over 42,000 (6%) during the period between 2010 and 2020. This recovery in population growth reflects post-recession recovery.

## Demographic History of AMBAG Counties

Population growth details for all three counties are shown below. County-specific summaries follow the charts.

## 2022 Regional Growth Forecast

**Figure 16: Population Growth Rates in Monterey County, San Benito County, Santa Cruz County, AMBAG Region and California (statewide) 1940-2020**

Source: California Department of Finance

### Monterey County

Between 1960 and 2000, Monterey County has grown at a rate slower than the AMBAG region as a whole. From 2000-2010 and 2010-2020 Monterey County grew at the same rate in the region. (See Figure 16, above.)

As a result of the closure of Fort Ord, Monterey County experienced a population decline in the middle of the 1990s, yet population growth rebounded later in the decade. The county registered 13 percent growth (an increase of 46,100) between 1990 and 2000. (See Figures 2 and 3)

The 1990s also saw the opening of two large institutions: California State University, Monterey Bay and Salinas Valley State Prison. Both are described in more detail in the Special Populations section below.

While the County as a whole grew, six of the county's thirteen jurisdictions experienced population loss during the 1990s (Carmel-By-The-Sea, -4%; Del Rey Oaks, -1%, Marina, -29%, Monterey, -7%, Pacific Grove, -4%, Seaside, -15%). Conversely, the population of Salinas grew by nearly 34,000 during the decade. Soledad also grew at a rapid clip (16,000 population) largely as the result of Salinas Valley State Prison opening in 1996.

The following decade saw much slower growth, with an increase of less than 13,300 (3%) between 2000 and 2010. Five jurisdictions lost population (Carmel-By-The-Sea, -9%; Del Rey Oaks, -2%,

## 2022 Regional Growth Forecast

Monterey, -6%, Pacific Grove, -3%, unincorporated Monterey County, -1%). The city of Seaside remained virtually unchanged.

From 2010 to 2020, the cities of Greenfield, King City, Marina, and Sand City all had estimated growth of greater than 10 percent. Only the city of Soledad is estimated to have lost population.

### San Benito County

While San Benito County grew at a rate much slower than the AMBAG region prior to the 1970s, the county saw rapid population growth in the 1970s, 1980s, and 1990s, a dip in the early 2000s, and a return to rapid growth 2010-2020. (See Figure 16, above.)

San Benito County registered rapid population growth, adding more than 16,500 population (45%) between 1990 and 2000. During this decade the city of Hollister nearly doubled in population (78%) while the population of San Juan Bautista declined (-1%).

San Benito's population growth slowed to four percent (2,000 population) between 2000 and 2010. The trend of the 1990s was reversed. Hollister grew by only one percent while San Juan Bautista increased by 20 percent.

From 2010 to 2020 San Benito County grew faster than the region, with Hollister and San Juan Bautista growing by 16% and 13%, respectively.

### Santa Cruz County

Santa Cruz County grew at a rate faster than the AMBAG region in the 1960s and 1970s, but grew more slowly in every other decade from 1940-2020. (See Figure 16, above.)

Santa Cruz County grew by more than 25,800 (11%) between 1990 and 2000. The fastest-growing jurisdiction in Santa Cruz County between 1990 and 2000 was Watsonville (42%) followed by Scotts Valley (31%). Capitola's population fell during the decade (-1%).

The County's growth slowed considerably, adding just under 6,800 population (3%) between 2000 and 2010. The fastest-growing jurisdiction in Santa Cruz County between 2000 and 2010 was Watsonville (16%, including the annexation area, 11% without) followed by Santa Cruz (10%). Scotts Valley, which grew rapidly during the 1990s, showed only two percent population growth during the decade. Capitola's population fell during the decade (-1%).

In recent years, no jurisdiction in Santa Cruz has grown by more than 10 percent. The fastest growing city, Santa Cruz, grew by 7% between 2010 and 2020.

## 2022 Regional Growth Forecast

## Adjustments for Special Populations

In small area demographic analysis, some populations grow or decline as a result of exogenous factors, rather than in response to demographic or economic conditions. For example, uniformed military populations, college populations, and prison populations may grow or decline as new facilities are added or older facilities are phased out of use. These population changes involve facilities that are outside the authority of local land use agencies and that change based on policy, rather than demographic, factors.

Changes in these facilities can result in population “shocks” that affect the rate of population change within an area, independent of larger demographic and economic trends.

As a result of their unique characteristics, these populations are referred to as “special populations” and are often treated separately in forecasting.

Special populations include people associated with military bases, tourists, prisons, and colleges and universities. The size of a special population may have no connection to the general trends affecting the area. A special population can be stable for long periods of time, balloon quickly, and deflate, or, in the case of military bases, disappear rapidly through a closure program. It is best to develop a detailed understanding of the nature of the special population and set out the projection for it separately.<sup>14</sup>

Over the past two decades, the AMBAG region has been home to several “special populations” including the military resident population at Fort Ord, the Defense Language Institute and Naval Postgraduate School, students at UCSC and CSUMB, and inmates at SVSP.

In the preliminary forecast, AMBAG staff began the shift-share analysis at 1996 to address the population “shocks” resulting from the closure of Fort Ord and the opening of both California State University Monterey Bay and the Salinas Valley State Prison. While this adjustment was effective at addressing some of the special population concerns, it has a key weakness: it does not allow for independent forecasting of special populations.

The following discussion provides a method for addressing that issue.

## 2022 Regional Growth Forecast

**History of Special Populations in the AMBAG Region*****Fort Ord***

Established in 1917, Fort Ord was eliminated during the Base Realignment and Closure Act of 1990, closing in 1994. This resulted in the loss of more than 30,000 residents in Monterey County, primarily in the jurisdictions of Marina and Seaside, as described in the Fort Ord Reuse Plan:

*Fort Ord has been a significant presence in Monterey County since 1917... maintained a large military population numbering approximately 14,500 military personnel and 17,000 family members of active-duty personnel... the resident population of Fort Ord totaled 31,270 in 1991.*<sup>15</sup>

In addition...

*The on-post resident population was divided between the two municipalities of Marina and Seaside. Through 1990, 17,139 people (56%) were within the Seaside city limits and 13,321 people (44%) were within the Marina city limits (Harding Lawson Associates, 1991, Workplan remedial investigation/feasibility study, Fort Ord, CA).*<sup>16</sup>

These population losses greatly affected the communities of Marina and Seaside. However, the forecast was developed using the 2000 to 2015 time period as a historical reference. By 2000 abnormalities in growth rates caused by the closure of Fort Ord had self-corrected. The Fort Ord Reuse Authority's mandate for overseeing the area ended in June 2020. Beginning with the 2022 RGF, the area will be projected as any other potential development in the AMBAG region, based on plans and permits.

***Defense Language Institute and Naval Postgraduate School***

The Army Language School, later renamed the Defense Language Institute, has been a presence in Monterey County since the end of World War II. The number of people living in group quarters at the Institute and Postgraduate School has been stable, at approximately 4,000, in recent years. Because of this stability, the 2018 RGF presumes no change to the population of these two institutions in future years.

<sup>15</sup> Fort Ord Reuse Plan, Volume 1: Context and Framework. June 1997.

<sup>16</sup> Fort Ord Reuse Plan, Volume 2: Reuse Plan Elements. June 1997.

## 2022 Regional Growth Forecast

***University of California, Santa Cruz***

Founded in 1965, the University of California, Santa Cruz grew to 9,800 students by the 1991-92 academic year, 10,885 students by the 1999-2000 academic year, and 16,300 full-time equivalent students in the 2009-2010 academic year.<sup>17</sup> In meetings with AMBAG staff, UCSC staff indicated that they expect growth of 300-500 students per year, resulting in a 2040 student forecast of 28,000 (the 2022 RGF holds this level constant from 2040-2045).

It is important to note that these projections reflect full-time equivalent students, and actual headcounts will likely be higher.

***California State University, Monterey Bay***

Founded in 1995, California State University Monterey, Bay grew to 2,265 students during the 1999-2000 school year and 4,000 students by 2010.<sup>18</sup> Although not created by the Fort Ord Reuse Plan, the University is a significant component of the Base Reuse Plan and as it continues to grow will help to stimulate the economic development of the Fort Ord Area. The most recent master plan projects full-time equivalent student enrollment of 12,000 by 2025.<sup>19</sup> In meetings with AMBAG staff, CSUMB staff indicated that they expect growth to 12,700 full-time equivalent students by 2045.

It is important to note that these projections reflect full-time equivalent students, and actual headcounts will likely be higher.

In addition, discussions with CSUMB staff suggested that some group quarters (student) dormitory housing in the “East Campus” unincorporated area would convert to faculty/family housing over time. This transition is reflected through the growth of group quarters population in the Marina area of the CSUMB campus, decline of group quarters in Unincorporated Monterey County—and transition of those formerly group quarters structures into family housing (i.e. increase in households and housing units).

## 2022 Regional Growth Forecast

***Salinas Valley State Prison and Soledad Correctional Training Facility***

Opened in 1996, Salinas Valley State Prison has a design capacity of 3,888.<sup>20</sup> According to annual reporting by the California Department of Finance, the facility had a resident population of 4,100 at the beginning of the 2000s decade and a population of 3,630 on January 1, 2010.<sup>21</sup> The facility has a maximum capacity of 4,400, according to the 2010 Master Plan Annual Report.<sup>22</sup>

Opened in 1946, Soledad Correctional Training Facility has a design capacity of 3,301. According to annual reporting by the California Department of Corrections and Rehabilitation and counts from the 2000 and 2010 decennial census, the facility had a resident population of between 6,000 and 7,200 during the decade.<sup>23</sup>

Because both facilities currently house group quarters populations in excess of their design capacity, no future population growth is shown at these facilities in the 2018 RGF. Population totals are held constant at their 2015 levels.

**Table 10: Historical Special Population Counts**

	1990	2000	2010	2015

## 2022 Regional Growth Forecast

**Adjustments to the Population Projections***Developing Special and Non-Special Population Estimates*

Special populations provide a challenge to the population projections because their growth and decline are often not determined by factors that impact the rates of change of the general population. This is particularly true of college students, prison inmates, and military personnel and their dependents. Residents of nursing homes, while also a special population, share many of the characteristics of the general population, and their growth and decline often mirror the demographic changes of the larger community. To deal with the special population issue, a common procedure applied in population projections is to exclude the special populations by using group quarters data and to project the adjusted population separately, i.e., the total population minus the special population. At the end of the projection module, the special population is added back to the projected adjusted population to produce the projected total population. The special population is either held constant or projected separately.<sup>24</sup>

Thus, projections for AMBAG jurisdictions (Marina, Santa Cruz, Seaside, Soledad and unincorporated Monterey County) should be adjusted to account for special populations independent of the non-special population trends.

To accomplish this, special populations should be subtracted from the census year population estimates used in developing the shift-share model population shares. Independent projections of the special populations (e.g., from master plan documents) should then be addressed separately in the population forecast.

*Incorporating Special Populations into the Final Projections*

As noted above, Fort Ord has closed, and thus major military populations can be assumed to be constant throughout the remainder of the forecast.

For the universities and the prison, master plan documents provide useful information about expected future populations. These population plans can be used to fill in horizon-year projections, which are then kept constant for any remaining years of the AMBAG forecast. Additionally, staff worked closely with UCSC to develop conservative estimates for growth after the horizon year of their long-range development plan.

## 2022 Regional Growth Forecast

### *Translating Population Growth into Housing*

Special population adjustments for Fort Ord require no special processing, as the military population on Fort Ord is not expected to change in future years.

However, university populations for UCSC and CSUMB pose a special case. While housing will be provided by the universities, it is likely that many students will live in group quarters (described in more detail in Attachment 4), but at least some students will reside in housing “in town” as part of the resident population of surrounding jurisdictions. For this reason, university population projections and housing projections were completed separately from the jurisdiction population projections.

Population projection adjustments for SVSP and SCTF require no special processing for housing unit projections. These populations will be classified as group quarters, and thus are not considered in housing calculations.

## **Adjustments for Annexations**

The shift-share approach outlined above presumes that most population change is a result of demographic and economic forces that can be represented by the rate of change over time. The shift-share approach is intended for use with jurisdictions that retain consistent geographic boundaries over time. Because the shift-share method presumes constant geographic boundaries, annexations, which by definition change jurisdiction boundaries, pose a unique problem. Adjustment techniques are needed to address these cases. Between 1990 and 2010 there was one heavily populated annexation in the AMBAG region. This case, the Watsonville annexation, is described in more detail below. (In 2008 Salinas also annexed the North of Boronda Future Growth Area, which had a population of approximately 100. This annexation, which affected the overall jurisdiction population by less than 0.1%, was not modeled separately.)

### **History of Annexations in the AMBAG Region**

In 2000 the city of Watsonville annexed a portion of unincorporated Santa Cruz County. Known as the Freedom-Carey annexation, the change was recorded in July 2000, after the 2000 decennial Census.

Historical population estimates for the City of Watsonville, unincorporated Santa Cruz County and Freedom-Carey annexation area are shown in Table 11 below.

The data for 2000 reflect reports published by the Local Agency Formation Commission with respect to the annexation area. Data for 1990 were derived using trend extrapolations based on the rate of growth in associated census tracts (1106 and 1107). Similarly, data for 2010 were derived using trend extrapolations based on the rate of growth in associated census tracts (1105.02, 1106 and 1107).

## 2022 Regional Growth Forecast

If the annexation of 2,022 residents were simply attributed to the population growth of Watsonville between 2000 and 2010, it would account for forty percent of the growth in the city's population during that period of time. Conversely, the loss of the annexed population would account for more than half of the decline in unincorporated population between 2000 and 2010.

Since the shift reflects an administrative boundary change, not a demographic one, the shift-share model was adjusted accordingly.

**Table 11: Historical Population Estimates for the Watsonville Annexation Area**

	1990	2000	2010
City of Watsonville	31,099	44,246	51,199
Excluding Annexation Area	31,099	44,246	49,229
Unincorporated County of Santa Cruz	130,086	135,345	129,739
Excluding Annexation Area	128,426	133,323	129,739
Annexation Area	1,660	2,022	1,970

*Sources: Analysis by PRB of data from the U.S. Census Bureau.*

### Adjusting the Watsonville and Unincorporated Santa Cruz County Projections

In order to ensure that the population shift resulting from annexation does not skew the shift-share results for Watsonville or unincorporated Santa Cruz County, population projections for Watsonville, unincorporated Santa Cruz County, and the annexation area were estimated separately.

To complete this adjustment, the estimated annexation area population was subtracted from the unincorporated Santa Cruz County population totals in 1990 and 2000. Similarly, the projected population from the annexation area population was added to Watsonville in 2010.

Independent shift-share projections were developed for each of the three sub-areas: Watsonville excluding the annexation area, unincorporated Santa Cruz County excluding the annexation area and the annexation area.

To complete the projections, the annexation area projected population growth was added to Watsonville. Unlike the special population projections described above, there are no further adjustments needed to translate the resulting population projections into housing projections.

development process faster and easier. The State of California offers grants to accelerate the production of housing and approves legislation that allows for more types of homes, like accessory dwelling units to be built statewide. Regionally, government agencies are considering how to better align housing policies with transportation initiatives because both contribute substantially to the region's cost of living.

The SCS land use pattern accommodates the more than 42,000 new households that will be needed over the next 25 years to serve a projected growth of nearly 108,000 additional people.

The SCS land use pattern addresses the needs of all economic segments of the population. Based on the capacity for planned housing development the region will be able to accommodate the projected housing needs for residents of all income levels.

## Regional Housing Needs Allocation

California Housing Element law requires that every eight years, AMBAG shall develop a methodology for distributing projected housing need in four income categories – very low, low, moderate and above moderate – to local jurisdictions in Monterey and Santa Cruz Counties and sets forth a process, objectives and factors to use for that methodology. The Council of San Benito County Governments (SBtCOG) performs this function for San Benito County. This process, the Regional Housing Needs Allocation (RHNA), is coordinated by the California Department of Housing and Community Development (HCD). The 2045 MTP/SCS includes an updated RHNA. The 6th Cycle Regional Housing Needs Determination (RHND) from HCD to AMBAG is 33,274 units. SBtCOG's 6th Cycle RHND is 5,005 units.

In the past, the RHNA was conducted separately from the MTP process. SB 375 now links the RHNA and MTP/SCS processes to better integrate housing, land use, and transportation planning. Integrating processes helps ensure that the state's housing goals are met. The RHNA occurs before each housing element cycle, which SB 375 changed from a five-year to an eight-year cycle.

The AMBAG region received its RHNA Determination (for Monterey and Santa Cruz Counties) from HCD for the housing element cycle (2023-2031). The AMBAG RHNA Plan allocates the RHNA Determination by jurisdiction. (For the San Benito RHNA, refer to SBtCOG's RHNA Plan.) Based on the RHNA Plan each jurisdiction will need to

identify adequate sites to address its RHNA allocations in the four income categories when updating its housing element.

Monterey and Santa Cruz Counties have enough housing capacity to accommodate the RHNA allocations. San Benito County also has the housing capacity to accommodate the RHNA as described in the San Benito RHNA Plan. The allocations do not exceed forecasted growth and can be accommodated through infill and redevelopment. The AMBAG and SBtCOG RHNA Plans are under development and are expected to be consistent with the 2045 MTP/SCS. The 2045 MTP/SCS will be adopted within 18 months of the RHNA planning period and 6th Cycle Housing Element deadline as documented by HCD. This schedule follows the required statutory deadlines.

## Meeting GHG Targets

In 2018, CARB set updated targets for lowering GHG in the Monterey Bay region. They call for a three percent reduction, in per capita GHG emissions from passenger vehicles by 2020 (compared with 2005); and a six percent per capita reduction by 2035 through land use and transportation planning.

The 2045 MTP/SCS demonstrates that the Monterey Bay region will meet these targets by focusing housing and employment growth in urbanized areas; protecting sensitive habitat and open space; and investing in a transportation system that provides residents, workers and visitors with transportation options that are more effective and diverse.

In addition, the 2045 MTP/SCS includes economic development strategies to encourage job growth in communities that are currently job poor as well as planning for new housing in communities that are currently job rich help to address the jobs/housing imbalance in the region and reduce vehicle miles traveled. The process to develop the MTP/SCS was based upon modeling these forecasted land use patterns and future transportation networks, along with the use of sustainable development principles that have been standard planning practice in the region for some time, and an extensive public outreach process.

## California Environmental Quality Act (CEQA) Streamlining

Provisions in SB 375 include opportunities for streamlining the CEQA process, when certain conditions are met, as an incentive for implementing projects that are consistent with this SCS. Generally, there are two types of projects for which CEQA requirements can be streamlined, once the MPO adopts an MTP/SCS that meet the greenhouse gas targets established by CARB:

- Transit priority projects streamlining
- Residential/mixed use projects streamlining

SB 375 includes specific requirements for the CEQA streamlining. The discussion below provides a general outline of the requirements.

### Transit Priority Projects

A Transit Priority Project (TPP) is a project within an Opportunity Area and is eligible for CEQA streamlining if it is:

- Consistent with the SCS;

## Executive Summary

In August 2021, the California Department of Housing and Community Development (HCD) issued a Regional Housing Need Determination to the AMBAG region for the 6th Cycle planning period of June 30, 2023 to December 15, 2031 and determined that the region must zone to accommodate a minimum of 33,274 housing units during this period. California housing law (Government Code § 65580 et seq.) requires AMBAG, acting in the capacity of Council of Governments (COG), to develop a Regional Housing Needs Allocation (RHNA) Plan to allocate existing and projected housing needs to local jurisdictions within Monterey and Santa Cruz Counties.

Based on the final RHNA Plan, each city and county must update its housing element to demonstrate how the jurisdiction will meet the expected growth in housing need over this period of time. The table below shows the final regional housing need allocation for each jurisdiction in the AMBAG region, broken into four income categories.

**Table 1 – RHNA for the AMBAG Region, June 30, 2023 to December 15, 2031**

## Introduction

Since 1969, the State of California has required that all local governments (cities and counties) adequately plan to meet the housing needs of everyone in the community. The California Department of Housing and Community Development (HCD) issued a Regional Housing Need Determination to the AMBAG region for the 6<sup>th</sup> Cycle planning period of June 30, 2023 to December 15, 2031. HCD determined that the region must zone to accommodate a minimum of 33,274 housing units during this period. HCD calculates the regional determination using information provided by the California Department of Finance and the most recent U.S. Census Bureau data regarding overcrowding, cost burden, and vacancy rate. The regional determination includes an overall housing need number, as well as a breakdown of the number of units required in four income distribution categories.

Once HCD issues their determination, the Regional Housing Needs Allocation (RHNA) Plan establishes the total number of housing units that each city and county must plan for within the eight-year planning period. The allocation is based on factors that address the five statutory RHNA objectives, as described below. The RHNA methodology and RHNA Plan are part of the state-mandated housing element law (Government Code § 65580 et seq.). Based on the adopted RHNA, each city and county must update its housing element to demonstrate how the jurisdiction will meet the expected growth in housing need over this period of time.

This document, the RHNA Plan, officially assigns the allocations to cities and counties for two of the three counties within the Monterey Bay Area, Monterey and Santa Cruz Counties. San Benito County conducts a separate RHNA, as explained below. The RHNA process and describes the adopted RHNA methodology including total unit allocations and allocations by income category. This plan also describes how the allocation meets the five statutory RHNA objectives. The appendix includes documents that were part of the planning process such as official correspondence from HCD regarding the regional determination and methodology review, AMBAG Board agenda items, and results of a statutorily-required jurisdiction survey. The table above shows the result of this planning process—an allocation of housing units by income level that jurisdictions plan to accommodate in their housing elements over the June 30, 2023 to December 15, 2031 timeframe.

## Housing Element Law and RHNA Objectives

State housing element law, Government Code § 65584 (d), requires the RHNA to be consistent with five objectives:

## Regional Housing Needs Allocation Plan: 2023 - 2031

1. Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties with the region in an equitable manner, which shall result in all jurisdictions receiving an allocation of units for low- and very low income households.
2. Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to § 65080.
3. Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.
4. Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.
5. Affirmatively furthering fair housing.

As explained below, AMBAG's Metropolitan Transportation Plan and Sustainable Communities Strategy (MTP/SCS) and its RHNA are consistent with these objectives.

### **The Metropolitan Transportation Plan/Sustainable Communities Strategy and RHNA**

Senate Bill (SB) 375, passed into state law in 2008, requires the coordination of housing planning with regional transportation planning through the MTP/SCS. This requires consistency in growth forecasts for land use, housing, and transportation purposes. In prior plans, the RHNA and the MTP were prepared independently and had different timelines and planning periods. SB 375 requires that the RHNA and MTP/SCS process be undertaken together in order to integrate housing, land use, and transportation planning to ensure that the state's housing goals are met and to help reduce greenhouse gas emissions (GHG) from cars and light duty trucks. The goal of this integrated planning is to create opportunities for residents of all incomes to have access to jobs, housing, services, and other common needs by a variety of means, including public transit, walking, and bicycling.

Prior to SB 375, RHNA was updated every five years and the MTP was updated every four years. Because SB 375 requires better coordination between transportation planning with land use and housing planning, the RHNA process is now tied to the adoption of every two cycles of the regional MTP/SCS. As a result, the RHNA Plan must be adopted every eight years, aligning with the adoption of the MTP/SCS. This also means that each city and county with a compliant

housing element will update its housing element every eight years instead of every five years, as required before SB 375.

## **2022 Regional Growth Forecast**

As the MPO, AMBAG carries out many planning functions for the tri-county area including development and maintenance of the regional travel demand model (RTDM), long range transportation planning and programming, and acting as a regional forum for dialogue on issues facing the region. Most of AMBAG's projects are carried out in support of these major functions, including but not limited to the regional growth forecast. AMBAG develops the forecast with a horizon year that matches the planning timeline of the MTP/SCS and the model years for the RTDM. In addition to informing MTP/SCS, the regional growth forecast (RGF) is an important reference point in the RHNA process.

The 2045 MTP/SCS includes a planning period through 2045. The years forecasted include 2025, 2030, 2035, 2040, and 2045. The forecast uses a model that predicts employment growth using a shift-share model based on local data as well as state and national trends. Population growth is then driven by employment growth. Household and housing growth are driven by population growth, demographic factors and external factors. This approach was vetted and approved by the AMBAG Board of Directors in 2014 for use in the metropolitan transportation plan, Moving Forward 2035 Monterey Bay. The framework was used again in 2018 for Moving Forward 2040 Monterey Bay, and remains in use in 2022. While the methodology for the 2022 RGF has remained the same through three planning cycles, the models have been updated for the Moving Forward 2045 Monterey Bay Plan to include current data, a revised base year of 2015 and a new horizon year of 2045.

## **Process for Development of the 2023-2031 Regional Growth Forecast**

In consultation with local planning departments, AMBAG prepared an estimated 2045 growth forecast for the region. The Planning Directors Forum was the primary venue for ongoing coordination between local agency planning staff and AMBAG; however, a number of jurisdiction-specific meetings and comment periods also were held, including over 100 one-on-one meetings held by AMBAG staff with each of the jurisdictions, the University of California, Santa Cruz, and the California State University, Monterey Bay. The development of the 2022 Regional Growth Forecast and the methodology is documented in detail as part of the 2045 MTP/SCS. Both of these documents can be found on the AMBAG website.

## Geography

The local jurisdictions addressed in the RHNA process for the AMBAG region include the sixteen incorporated cities and two counties as shown in Table 3. University of California Santa Cruz, California State University Monterey Bay, the Salinas Valley State Prison (SVSP), the Correctional Training Facility (CTF) in Soledad, the Defense Language Institute (DLI), the Naval Post Graduate School (NPS) are not allocated any regional housing need since they are not city or county agencies, located on State or federal lands, and considered exempt entities not part of the RHNA process.

The AMBAG RHNA area is predominantly rural, with urban development clustered long the Monterey Bay coastline and in agricultural inland valleys along US 101. Major urban development in the Monterey Bay Area primarily occurs along the Bay coastal plains and foothills of the Monterey Peninsula from the City of Santa Cruz in the north to the City of Carmel-by-the-Sea to the south. The Santa Cruz, Watsonville, Seaside-Monterey, and Salinas urbanized areas are the most densely developed in the region.

**Table 3: Cities and Counties Participating in the AMBAG RHNA Process**

Carmel-by-the-Sea	Del Rey Oaks	Gonzales	Greenfield
King City	Marina	Monterey	Pacific Grove
Salinas	Sand City	Seaside	Soledad
Capitola	Santa Cruz	Scotts Valley	Watsonville
County of Monterey	County of Santa Cruz		

A substantial portion of the AMBAG area is forested and hence at an elevated risk of fire. Large forests and wooded areas border many cities and are prevalent throughout County unincorporated areas. In 2020, the Santa Cruz County area was affected by one of the top 20 most destructive fires in California history, destroying 1,490 structures including homes, burning over 86,000 acres of rural forested land including multiple unincorporated communities and towns. In 2016, the Soberanes Fire in Monterey County burned over 132,000 acres and dozens of homes, and in 2020, the Dolan Fire in Monterey County burned over 124,000 acres. These risks make developing housing in suburban and rural areas near forested areas particularly difficult.

Many population centers in the Monterey Bay Area are located on the coast and subject to flooding due to continuing sea level rise. During the plan period, the coastal region in AMBAG will be affected by sea level rise according to the National Oceanic and Atmospheric Administration (NOAA). This threatens existing housing, and limits where new housing can be constructed. Jurisdictions affected include Santa Cruz, Capitola, the County of Santa Cruz,

Marina, Seaside, Sand City, Monterey, Pacific Grove, Carmel, and the County of Monterey. Also affected are the unincorporated communities of Aptos, Live Oak, Moss Landing, and Pebble Beach.

**Figure 1: Map of AMBAG RHNA Area**

## Process for Developing RHNA

The State of California, through the Housing and Community Development Department (HCD), issued a Regional Housing Needs Determination to AMBAG for Monterey and Santa Cruz Counties (see Appendix 4 for the letter of determination). HCD calculated the regional determination using information provided by the California Department of Finance. The regional determination includes an overall housing need number, as well as a breakdown of the percentage of units required in four income distribution categories, as further defined below. The region's overall allocation for Monterey and Santa Cruz Counties is 33,274 housing units. San Benito County receives its own Regional Housing Needs Determination (RHND) from HCD and must complete its own RHNA.

## San Benito County

The state mandate for distributing the RHNA is tied to the state designation of a Council of Governments (COG). Each COG is expected to distribute the RHNA to their member jurisdictions. AMBAG is the Metropolitan Planning Organization for the Counties of San Benito, Santa Cruz, and Monterey and has prepared a 2045 MTP/SCS for the tri-county region. However, it is the COG for only the Counties of Santa Cruz and Monterey. For this reason HCD makes a separate determination for San Benito County and tasks the San Benito County Council of Governments (SBtCOG) with developing its own RHNA Plan. AMBAG does coordinate with SBtCOG so that its RHNA Plan is consistent with the 2045 MTP/SCS.

## AMBAG's Role in RHNA

Based on the regional determination provided by HCD, AMBAG must develop the allocation of units to each jurisdiction, along with the plan document that contains the allocations. It is AMBAG's responsibility to coordinate with HCD prior to its determination of the regional housing need. Once AMBAG receives the regional determination, including the overall need number and the income category distribution, it must adopt a methodology for distributing the regional growth number throughout the region. The methodology is the basis for the final RHNA Plan that AMBAG adopts.

The methodology used for the RHNA distribution is developed in coordination with the local jurisdictions via the Planning Directors Forum and the AMBAG Board of Directors, as well as with input from the public. The state mandated RHNA Plan establishes the total number of housing units that each city and county must plan for within the eight-year planning period broken into four income categories as described above. Based on the adopted RHNA, each city and county must update its housing element by December 2023.

## Importance of RHNA for Local Governments

RHNA allows communities to anticipate growth so that the region can grow in ways that enhance quality of life, improve access to jobs, promote transportation mobility, and address fair share housing needs for all members of the community. Local governments were key to the development of the RHNA allocation methodology and will determine how their jurisdiction's allocation will be accommodated through their Housing Elements.

Once it receives its allocation, each local government must update the Housing Element of its General Plan and its zoning to show how it plans to accommodate its RHNA requirements and meet the housing needs in its community. It is in the community's Housing Element that local governments make decisions about where future housing units could be located and the policies and strategies for addressing specific housing needs within a given jurisdiction, such as

addressing homelessness, meeting the needs of specific populations, affirmatively furthering fair housing, or minimizing displacement. Having a sufficient and housing element compliant with HCD requirements is also critical to securing and maintaining state funding for their community.

State funding programs often consider a local jurisdiction's compliance with housing element law. These competitive funds can be used for fixing roads, adding bike lanes, improving transit, or providing much needed affordable housing to communities. In some cases, funding from state/federal housing programs can only be accessed if the jurisdiction has a compliant housing element. In other cases, a compliant housing element allows grant applicants to receive extra points on their application if they do have a compliant housing element, increasing their chances in the competitive application process. Moving forward, more state grant funds may include housing element compliance factors. State funds which tie housing element compliance to eligibility or scoring include the following:

- Community Development Block Grant Program
- Infill Infrastructure Grant Program
- Local Housing Trust Fund Program
- Affordable Housing and Sustainable Communities Program
- Permanent Local Housing Allocation Program
- Caltrans Sustainable Communities Grant Program
- Local Partnership Program
- Transit and Intercity Rail Capital Program
- Active Transportation Program
- Solutions for Congested Corridors Program
- HOME Investment Partnerships Program

## The Regional Housing Needs Determination (RHND)

The California Department of Housing and Community Development (HCD) identifies the total number of homes for which each region in California must plan in order to meet the housing needs of people at all income levels. The total number of housing units from HCD is separated into four income categories that cover everything from housing for very low-income households all the way to market rate housing. AMBAG is responsible for developing a methodology to allocate a portion of this housing need to every local government in the region.

The four income categories included in the RHND are:

- Very Low Income: Less than 50% of Area Median Income
- Low Income: 50-80% of Area Median Income
- Moderate Income: 80-120% of Area Median Income
- Above Moderate Income: 120% or more of Area Median Income

In a letter dated August 31, 2021 the California Department of Housing and Community Development (HCD) provided AMBAG with the RHND for use in this cycle of RHNA (See appendix 4).

**Table 2: RHND from HCD for AMBAG – June 30, 2023 to December 15, 2031**

<u>Income Category</u>	<u>Percent</u>	<u>Housing Unit Need</u>
Very-Low*	23.6%	7,868
Low	15.5%	5,146
Moderate	18.5%	6,167
Above-Moderate	42.4%	14,093
<b>Total</b>	<b>100.0%</b>	<b>33,274</b>

\*Extremely-Low 13.1% Included in Very-Low Category

*Income Distribution: Income categories are prescribed by California Health and Safety Code (§ 50093, et. Seq.). Percentages are derived based on Census/ACS reported household income brackets and county median income.*

The RHND is based on a population and household forecast for the region from the California Department of Finance (DOF) and the application of specific adjustments to determine the total amount of housing needs for the region. Certain adjustments are a result of recent legislation that sought to incorporate an estimate of existing housing need, per Government Code 65584.01, shown below.

- The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subsection, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
  - The term “overcrowded” means more than one resident per room in each room in a dwelling.
  - The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
  - The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.

- The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

The RHNA process only considers the needs of the population in households who are housed in the regular housing market, and excludes the population living in group quarters, which are non-household dwellings, such as jails, nursing homes, dorms, and military barracks. HCD uses the age cohorts of the forecasted population from the California Department of Finance to understand the rates at which people are expected to form households. This can vary for people at different stages of life. This results in the estimate of the total number of households that will need a housing unit in 2031, which is the end date of the projection period for AMBAG’s RHNA cycle.

The total number of projected households is then adjusted using the factors related to vacancy rate, overcrowding, and an estimate of the need for replacement housing for units that were demolished or lost. These adjustments result in a forecast of the number of housing units that will be needed to house all households in the region in 2031. The number of expected occupied housing units at the beginning of the RHND period is subtracted from the total number of housing units needed, which results in the number of additional housing units necessary to meet housing demand. The final step is an adjustment related to cost-burdened households, which leads to the total RHND.

## Distributing the RHNA and Income Categories

California’s Housing Element Law (Government Code § 65580 et seq.) mandates that AMBAG develop and approve a RHNA methodology and RHNA Plan for Monterey and Santa Cruz Counties and the cities within. Once AMBAG receives the regional determination, including the overall need number and the income category distribution, it must adopt a methodology for distributing those numbers throughout the region. The methodology is the basis for the final RHNA Plan that AMBAG adopts.

The RHNA has two parts as required by state law:

- Overall Allocation: AMBAG receives a total housing unit number for growth during the planning period for Monterey and Santa Cruz Counties. AMBAG is required to distribute this regional housing growth number to the jurisdictions within the region for the period from January 30, 2023 to December 15, 2031.
- Income Category Distributions: HCD also provides a household income distribution of the total regional housing unit number. As defined by state law, four income categories

make up this distribution: very low income (less than 50 percent area median income [AMI]); low income (50 to 80 percent AMI); moderate income (80 to 120 percent AMI); and above moderate income (above 120 percent AMI). The total housing unit growth AMBAG allocates to each jurisdiction must be further allocated into the four household income categories.

## Coordination with Jurisdictions

The most critical factor in the RHNA process is the development of the methodology for allocating housing units within the region. The meetings of the regional Planning Directors Forum, comprised of local government planning staff but open to the public, served as the forum for the technical development of the draft methodologies. The Planning Directors Forum met monthly and provided input on approaches to different methodologies. AMBAG staff developed different methodology options for inquiry, review, and input from the planning directors. The AMBAG Board of Directors received regular updates on the development of the RHNA and the methodologies being considered. Of the various methodologies discussed at the Planning Directors Forum and the Board of Directors' meetings, the methodology emphasizes AFFH and a balanced jobs/housing ratio was selected as the preferred method and was recommended to the Board of Directors. The Board of Directors approved this methodology on April 13, 2022.

## Coordination with Regional Stakeholders and the Public

The methodology used in this RHNA allocation was discussed multiple times at the Board of Directors and the Planning Directors Forum as well as presented at city council meetings and other stakeholder meetings. In addition, specific recommendations from the public were included in the selected methodology. These groups expressed support for the methodology and indicated that it was a good representation of housing need in the region. Opportunities for public comment were provided at all Board of Directors and Planning Directors Forum meetings.

## Timeline

The RHNA Plan is scheduled for adoption by the AMBAG Board of Directors in Fall 2022. Based on state statutory timelines prescribed in Government Code § 65584.04, below are the key milestones dates for the RHNA:

- February 2021 to December 2021 – The Planning Directors Forum, comprised of the planning directors and local government planners for all of the cities and counties in the region, met seven times over eleven months to discuss RHNA and to develop and evaluate draft RHNA methodologies. The AMBAG Board of Directors were informed

regularly on the development of the different draft methodologies. As meetings open to the public, these meetings also served as opportunities for the public and advocacy groups to provide comments on the process.

- June 2021 to January 2022 – The Board of Directors met seven times over eight months to review progress on the RHNA methodologies, take input from the Planning Directors Forum, and provide feedback on the process. As meetings open to the public, these meetings also served as opportunities for the public and advocacy groups to provide comments on the process.
- January 12, 2022 – The AMBAG Board of Directors adopted the draft RHNA methodology.
- April 13, 2022 – Approval of the final RHNA methodology by the AMBAG Board
- April 22, 2022 – Draft RHNA plan released with RHNA allocations by jurisdictions
- April 22 to June 6, 2022 – Local jurisdictions and HCD may appeal RHNA allocation within 45 days of release of the draft RHNA plan/allocations
- May 2022 – AMBAG releases final 2045 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) accommodating RHNA
- June 7 to July 22, 2022 - Local jurisdictions and HCD may comment on appeals within 45 days of the close of the appeal period (if appeal(s) are received)
- June 8, 2022 – Adoption of Final 2045 MTP/SCS by AMBAG Board
- August 10, 2022 - Adoption of Final 2023-31 RHNA Plan with RHNA allocations by AMBAG Board (if no appeal(s) are received)
- August 10, 2022 - AMBAG to hold public hearing on appeals (if appeals are received)
- September 23, 2022 - AMBAG makes final determination that accepts, rejects, modifies appeals and issues final proposed allocation plan
- October 12, 2022 - Adoption of Final 2023-31 RHNA Plan with RHNA allocations by AMBAG Board (if appeal(s) are received)
- December 15, 2023 - Jurisdiction's 6th Cycle Housing Elements are due to HCD

## Housing Elements

Once a local government has received its final RHNA from AMBAG, it must revise the Housing Element of its general plan and update zoning ordinances to accommodate its portion of the region's housing need. For this cycle, that process must be completed by December 2023. Communities are also required to report their progress to HCD annually.

The four income categories, as listed above, must be addressed in a jurisdiction's housing element. Specifically, accommodations must be made to ensure that the jurisdiction provides

sufficient zoning capacity to accommodate the projected housing need in each income category. For the very low and low income categories, jurisdictions generally are required to identify sites (constructed or vacant) zoned at multifamily residential densities.

It is important to note that each jurisdiction is responsible for providing sufficient zoning capacity for the units allocated to all four economic income categories, but is not responsible for the construction of these units. The intent of the housing element law is to ensure that jurisdictions do not impede the construction of housing in any income category. Other factors, such as market forces, are beyond a jurisdiction's control and have considerable influence over whether or not housing units in each income category are actually constructed. The HCD website contains more information about Housing Element compliance at <https://www.hcd.ca.gov/community-development/housing-element/index.shtml>.

## **Adopted RHNA Methodology and Distribution**

Once HCD issued the Regional Housing Need Determination of 33,274 housing units for our region, state housing element law required AMBAG to formulate a methodology to assign a share of the RHND to each jurisdiction in the region. The RHNA methodology was approved by the Board of Directors on April 13, 2022. Before asking the Board to approve a methodology AMBAG reviewed all of the HCD approved RHNA methodologies to date for the 6th Cycle from other COGs and presented the results to the Planning Directors Forum and the Board. The list of options was refined and narrowed with recommendations from the Planning Directors Forum before presentation to the Board. The final methodology that was chosen distributes the RHNA based on the RGF, AFFH, jobs/housing balance, jobs, climate resiliency, and transit service. Using this method creates a direct tie to the objectives of the Housing Element law as well as the goals and concepts in the 2045 MTP/SCS.

### **RHNA Methodology**

This section describes the draft methodology that the AMBAG Board of Directors approved on January 12, 2022. Appendix 1 provides the RHNA unit and income allocation estimates based on the approved draft methodology. To satisfy the requirements of Government Code § 65584.04(a) AMBAG, in consultation with HCD staff, elected to pursue a three-step methodology. The first and second steps allocates the total number of units for the AMBAG region. The third step allocates by income category.

#### **First Step in RHNA Methodology: 2022 Regional Growth Forecast Base Allocation**

This RHNA methodology allocates a portion of housing units (6,260) based on data for projected housing growth for the four-year RHNA planning period from the 2022 Regional Growth Forecast (RGF). The 2022 RGF was used in the 2045 Metropolitan Transportation Plan/Sustainable

Communities Strategy (MTP/SCS). The use of the 2022 RGF data is important to meeting the RHNA plan statutory objectives of protecting environmental and agricultural resources and achieving the region's greenhouse gas reduction targets. (Gov. Code, § 65584(d)(2).) Use of the 2022 RGF ensures that this RHNA methodology is consistent with the 2045 MTP/SCS, which was released for public review and comment in November 2021.

The 2022 RGF is the most accurate growth forecast available for the region, is more granular than any other available projections, included significant quality control, was reviewed and approved by executive planning staff in all jurisdictions for accuracy, and was accepted by the AMBAG Board. This supports the furtherance of a RHNA plan statutory objective, which focuses on promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets. (Gov. Code, § 65584.04(d)(2).)

The 2022 RGF allocation step is just one element in the RHNA methodology; jobs, jobs/housing balance, transit, resiliency, and AFFH are all used to allocate housing units, which go above and beyond existing jurisdictions' general plans. In fact, HCD's 6th Cycle RHND of 33,274 units is higher than the number of units that jurisdictions within the AMBAG region have planned for through 2050, so general plan changes will be necessary and are not precluded by using the 2022 RGF as a part of the allocation.

The data source for this factor is described below:

- 2022 RGF: Housing growth from 4-year RHNA period from the AMBAG 2022 RGF (accepted for planning purposes by the AMBAG Board in November 2020), based on California Department of Finance (2020)
  - The full RGF can be found at the following location:  
[https://ambag.org/sites/default/files/2021-11/PDFAAppendix%20A\\_2022%20RGF.pdf](https://ambag.org/sites/default/files/2021-11/PDFAAppendix%20A_2022%20RGF.pdf) and  
<https://www.ambag.org/plans/regional-growth-forecast>

### **Second Step in RHNA Methodology: Jobs, Jobs/Housing Balance, Transit, Resiliency, and AFFH Unit Allocation**

The second step in the RHNA methodology allocates the remaining units (27,014) for the AMBAG region by the following categories: 15% jobs (4,000 units), 31% jobs/housing (8,449 units), 4% transit (1,038 units), 8% resilience (2,075 units), and 42% of AFFH (11,452 units). The draft methodology presented here is the result of several rounds of methodology revision to include

feedback from the AMBAG Board, Planning Directors forum, and the community. Revisions also accommodated additional feedback from the public and HCD staff, including adding jobs/housing and AFFH factors and reducing the weight of the RGF in the allocation.

Another revision made to reflect suggestions from HCD staff was to include both the California State Treasurer's Tax Credit Allocation Committee (TCAC) and Racially Concentrated Areas of Affluence (RCAA) data to calculate the AFFH allocation factor for incorporated jurisdictions

Data sources used for this second step in the RHNA methodology are described below.

- Employment: AMBAG 2022 RGF, based on InfoUSA and California Employment Development Department (2020)
  - Jobs data reflects the pre-pandemic distribution of employment opportunities throughout the AMBAG region. Future job growth in Monterey and Santa Cruz Counties is expected to be concentrated in the same areas. Since such a large share of the region's jobs are agricultural, allocating based on jobs helps the region address the housing needs of farmworkers. (Gov. Code, § 65584.04(e)(8).)
  - Focusing a significant share of the RHNA allocation on jobs helps to correct existing jobs/housing imbalances.
- Jobs-Housing Ratio: Number of jobs in 2020 divided by number of housing units, both jobs and housing data are from AMBAG 2022 RGF, based on InfoUSA and California Employment Development Department, and California Department of Finance (2020).
- Transit: Existing (2020) transit routes with 15- and 30-minutes headways, based on existing transit routes and stops from transit operators
  - While the AMBAG region does not have the kind of extensive transit system found in larger urban areas, transit access is important for the sustainability of future growth.
  - Focusing future developing in areas with the region's highest quality transit promotes infill development and encourages efficient development patterns. (Gov. Code, § 65584(d)(2).)
- Resiliency: Percent not in high fire risk or 2' sea level rise risk, CALFIRE, California Public Utilities Commission (CPUC), and National Oceanic and Atmospheric Administration (NOAA)
  - The AMBAG region includes areas at great risk due to climate change, including areas at high risk of wildfire and areas at risk of inundation due to sea level rise. These constraints to development must be considered as the region plans for climate change.

- This factor furthers the objective of promoting infill development, protecting environmental resources, and encourages efficient development patterns. (Gov. Code, § 65584(d)(2).)
- Affirmatively Furthering Fair Housing Unit Allocation: The AFFH factor is the average of a jurisdiction’s RCAA and TCAC score for incorporated jurisdictions, both of which are explained below. For unincorporated areas the AFFH factor is the TCAC score alone and does not include RCAA. Given the size of the unincorporated areas, TCAC better reflects the diversity of high- and low-income communities within the unincorporated areas. Jurisdictions qualifying as RCAAs, partial RCAAs, or TCAC Opportunity Areas are shown in Appendix 2.
  - RCAA: Jurisdictions with higher than the regional average for percentage above 200% of the poverty level and percentage white are defined as RCAAs. Jurisdictions that qualify under one category receive a partial allocation. Data was utilized from the U.S. Census Bureau, American Community Survey (2015-2019) and 2020 Census.
  - TCAC: This score reflects the percent of each jurisdiction’s households in high/highest opportunity areas. Data was used from the TCAC Opportunity Map Database (2021) and U.S. Census Bureau, American Community Survey (2015-2019).

### **Third Step in RHNA Methodology: Income Allocation**

Addressing the socioeconomic disparities of the AMBAG region’s member jurisdictions was a key focus of the income allocation methodology. Though jurisdiction level disparities cannot be completely corrected within a single RHNA cycle, Planning Directors Forum and AMBAG Board members recommended allocating a high weight to this factor.

There are several ways to measure socioeconomic disparities across jurisdictions. After considering alternatives, the AMBAG Board of Directors suggested a measure of Racially Concentrated Areas of Affluence (RCAA), based on data from the U.S. Census Bureau and a framework described by the U.S. Department of Housing and Urban Development. Using the most recent data available from the U.S. Census Bureau, jurisdictions that are both high income (higher than the regional average for percentage above 200% of the poverty level) and racially-concentrated (above the regional average for percent white non-Hispanic) are defined as RCAAs. Jurisdictions that were either higher income or racially-concentrated, but did not meet both criteria, were identified as “partial RCAA.” Consensus from the PDF was that the RCAAs analysis better reflected the AMBAG region’s areas of opportunity than alternative measures such as the HCD/TCAC Opportunity Map data.

The third step of the methodology shifts Above Moderate units to Very Low and Moderate units to Low in jurisdictions that qualify as RCAAs. This results in RCAA jurisdictions getting a higher share of their RHNA in the lower income categories. In the draft methodology presented here, just over 53% of the RHNA allocation is Very Low or Low income in jurisdictions that are RCAAs. In partial RCAA jurisdictions, approximately 38% of the RHNA allocation is Very Low or Low income. The comparable share for non-RCAA jurisdictions is less than 23%.

The data sources used for this step are described below.

- AFFH Income Allocation: U.S. Census Bureau, American Community Survey (2015-2019) and 2020 Census

### **RHNA Objectives**

The following section summarizes how the development of the RHNA allocation methodology and the income group allocation methodology satisfies the five objectives. Development of the RHNA allocation methodology and the income group allocation methodology was focused on satisfying the five RHNA objectives (Govt. Code §65584(d)(1-5). Appendix 1 illustrates the methodology in further detail.

- 1. Increase the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households.*

The 6th Cycle RHNA methodology allocates units to all jurisdictions in the AMBAG region. The proposed RHNA methodology affirmatively furthers fair housing by allocating units based on TCAC/RCAA data and by allocating a larger share of very low and low income housing in jurisdictions that have an above-average share of households in advantaged areas.

To promote a mix of housing types, the methodology adjusts jurisdictions' allocations by income levels, and provides larger shares of very low- and low-income categories to jurisdictions that have historically been racially concentrated areas of affluence (Carmel by the Sea, Del Rey Oaks, Monterey, Pacific Grove, unincorporated Monterey County, Scotts Valley, and unincorporated Santa Cruz). Jurisdictions which already contain a disproportionately high share of very low and low income households are allocated higher proportions of moderate and above-moderate housing allocations. In accordance with State law, each jurisdiction is allocated housing in all four income groups.

- 2. Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*

The methodology directly complements the region's SCS which seeks to reduce greenhouse gases emitted by light-duty vehicles. AMBAG's SCS achieves the required greenhouse gas emissions (GHG) with a critical strategy that addresses the region's jobs-housing imbalance. AMBAG achieves its GHG target of a 6% reduction per capita for 2035. AMBAG's SCS promotes infill development, socioeconomic equity, and the protection of agricultural resources. In excess of 76% of the region's determination is allocated to incorporated cities, thereby advancing this objective by promoting infill development. In addition, the allocation provided to the unincorporated counties could reasonably be assumed to be accommodated within currently developed areas. In its planning survey responses, both Monterey and Santa Cruz Counties noted that substantial proportions of their unincorporated areas are preserved or protected from urban development as conservation land, state parks, federal ownership, via land trusts, or are protected under federal and state species protection regulations or under the Williamson Act. This largely constrains new development in the unincorporated areas. Much of the existing development in the unincorporated counties is indistinguishable to that of the abutting cities; therefore, it is not expected to place demand on transportation inefficient parcels of land.

By allocating 4% of RHNA by transit, the methodology further promotes more housing in jurisdictions with better transit access, which will further reduce GHG emissions and promote efficient development patterns. By allocating 8% of RHNA using a resiliency factor, the methodology promotes protection of coastal and forest areas by shifting allocations away from these sensitive environmental resources.

3. *Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*

By allocating a substantial share of the RHND based on jobs (15%) and jobs/housing balance (31%), AMBAG's methodology directly addresses the imbalance between jobs and housing. The methodology allocates a majority of units to jurisdictions with jobs-to-housing imbalances.

4. *Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*

Addressing the income-equity disparities of the region's jurisdictions was a key focus of the income allocation methodology. Though jurisdiction-level disparities cannot be completely corrected within a single RHNA cycle, PDF members recommended, and the AMBAG Board of Directors assured this was a significant consideration within the RHNA.

Using the RCAA and TCAC adjustments for AFFH, the RHNA places a higher proportion of very low and low income units in more affluent areas which have a shortage of these types of units. This shift necessarily allocated a significant portion of very low and low income units away from jurisdictions which a preponderance of lower income units, placing more moderate and above moderate units in these communities. The AMBAG methodology directs a higher share of total units to TCAC/RCAA jurisdictions, and a higher share of lower income housing to RCAA jurisdictions. In RCAA jurisdictions, more than 53% of the RHNA allocation is Very Low or Low income. In partial RCAA jurisdictions, approximately 38% of the RHNA allocation is Very Low or Low income. The comparable share for non-RCAA jurisdictions is less than 23%.

*5. Affirmatively furthering fair housing.*

The proposed RHNA methodology affirmatively furthers fair housing by allocating units based on TCAC and RCAA data. The proposed RHNA methodology allocates a large portion of the RHNA (42% of the total allocation) based on AFFH. The methodology assigns additional units to jurisdictions that are above the regional average for percentage of population about 200% of the poverty level and/or which have a higher racially concentrated white population than the regional average and/or have areas of high/highest opportunity. The methodology also focuses a larger share of very low and low income housing in jurisdictions that have an above-average share of advantaged households, as described in Objective 4 above.

### **RHNA Methodology Metrics**

AMBAG evaluated the draft methodology to ensure that it performed well in meeting all of the RHNA objectives. Appendix 3 highlights how the draft methodology supports and furthers the RHNA objectives.

### **RHNA Factors**

To the extent that sufficient data is available, the COG must consider 13 factors when developing the methodology that allocates regional housing needs. The following section summaries how the development of the RHNA allocation methodology satisfies the 13 factors.

- 1. Each member jurisdiction's existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.*

The final RHNA methodology directly incorporates each jurisdiction's existing and projected jobs-housing relationship in both the baseline allocation and the allocation factors. Forecasts from the

MTP/SCS 2045 inform the baseline allocation. The final RHNA methodology improves jobs-housing balance by using factors related to job proximity to allocate a significant portion of the RHND. These factors direct housing units to those jurisdictions, allocating 31% of units to areas with jobs to housing imbalances (higher jobs/housing ratios). The methodology also allocates 42% of units based on AFFH, placing more units in higher income areas which correspond to areas with lower jobs to housing ratios. The final RHNA methodology helps to create a more balanced relationship between housing and jobs by directing RHNA units to job-rich jurisdictions and jurisdictions with the most imbalanced jobs-housing fit. Additionally, the jurisdictions with the worst jobs-housing fit receive a larger share of their RHNA as affordable housing than other jurisdictions. An equity adjustment is included in the methodology, directing additional lower-income units to jurisdictions with an imbalanced jobs-housing ratio.

2. *The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following: (A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period; (B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding; (C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses; and (D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.*

The final RHNA allocation assigns 8% of RHNA using a resiliency factor which allocates RHNA units away from forested areas at high risk of fire, and away from coastal areas that may be inundated should sea levels rise by at least two feet. This approach protects open space, environmental habitats, and natural resources, and encourages housing growth away from these sensitive resources.

All other RHNA factors assign housing units towards incorporated population centers by allocating factors such as jobs, jobs/housing ratio, transit, resiliency, and AFFH. This works to direct housing away from farmland, and towards cities which normally have adequate sewer and water service.

- 3. The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.*

The final RHNA methodology allocates 4% of the region's RHNA units based on a jurisdiction's transit service. The methodology will encourage higher-density housing in jurisdictions with existing transit infrastructure, which can maximize the use of public transportation in these communities.

- 4. Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.*

The large majority of the RHNA allocation is within incorporated areas. Monterey County has a policy as well as several agreements with cities to direct growth into incorporated areas. AMBAG considered and incorporated these policies and agreements into the development of the 2022 Regional Growth Forecast by directing the majority of growth in the forecast towards incorporated cities. Because the RHNA is based on the 2022 Regional Growth Forecast the distribution inherently directs growth towards incorporated cities. While most of the growth within Monterey County is planned within incorporated cities, and there are policies reinforcing this growth pattern, the County has made plans to accommodate new population within Community Plan Areas. Based on this and the reality of a continued presence of low income minority populations in the unincorporated areas of the County, Monterey County will also have to plan for affordable housing as allocated in this RHNA Plan. Santa Cruz County does not have similar agreements with cities to direct development towards incorporated areas.

- 5. The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.*

Comprehensive data about the loss of assisted housing units is not available for all jurisdictions in a consistent format. Given the lack of consistent data, this topic was not included as a

specific factor in the final RHNA methodology. Some jurisdictions indicated that there was a small loss of units contained in assisted housing developments. However, the cumulative loss for any given jurisdiction is relatively small and therefore was not considered as a factor adjustment. The loss of assisted housing units for lower income households is an issue that would be best addressed by local jurisdictions when preparing their Housing Elements.

*6. The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.*

The final methodology allocates lower-income units to all jurisdictions, particularly those with the most access to opportunity, allocating 42% of the region's lower-income units based on the jurisdictions' access to opportunity according to the California Tax Credit Allocation Committee (TCAC) Opportunity Maps and Racially Concentrated Areas of Affluence (RCAA). Jurisdictions with the highest housing costs receive a larger percentage of their RHNA as lower-income units than other jurisdictions in the region, and the jurisdictions with the most houses in High or Highest Resource census tracts also receive a larger percentage of their allocations as lower income units than other jurisdictions. Local governments will have additional opportunities to address jurisdiction specific issues related to cost burdened households when they update their housing elements.

*7. The rate of overcrowding.*

To address the needs of overcrowding in the region, HCD's RHNA Determination included an overcrowding adjustment which added housing units to the regional housing need to alleviate overcrowding in the region. As a result, overcrowding is considered throughout the region through inclusion in the base allocation from HCD. Since overcrowding tends to be the worst in lower income communities, including an overcrowding metric in the methodology would have placed more housing in lower income communities. This would have been counter to the AFFH metric, which requires more lower income housing be placed in jurisdictions with an existing higher income housing stock. Such an allocation would have also been counter to guidance provided by HCD during consultation on the methodology process. While the methodology does not have a specific overcrowding metric, the methodology base allocation is based on the RGF which assigns a significant share of housing growth to areas of high demand, which includes jurisdictions with higher overcrowding rates.

*8. Housing needs of farmworkers.*

The RHNA allocation benefits farmworker housing due to the rural and agricultural nature of the region. Most of the population is within a few miles of farmland, and nearly every population center is no further than 15 miles from an agricultural area. By encouraging housing development throughout the region, the RHNA will benefit the farmworker community.

*9. The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.*

The region currently has two major universities, the University of California, Santa Cruz (UCSC) and the California State University, Monterey Bay (CSUMB). Both universities place housing demands on their surrounding jurisdictions. The majority of the RHNA allocation is within the commute sheds of these two universities, primarily within the Santa Cruz metropolitan area near UCSC, and within the Monterey and Salinas metropolitan areas near CSUMB. In addition, UCSC has made efforts to meet some of that demand as there is a binding agreement between the University and the City of Santa Cruz. CSUMB is planning for growth which has generated housing pressure on the surrounding jurisdictions. The City of Marina is actively working to meet some of this demand with plans for housing development in areas close to the campus. Not only will housing be in demand in the City of Marina, but Marina is a closer commute than the Salinas Valley is to those coastal cities that have severe restrictions on new development.

*10. Housing needs of individuals and families experiencing homelessness.*

Comprehensive jurisdiction-level data about individuals and families experiencing homelessness is not available for most AMBAG jurisdictions. As a result, this topic was not included as a specific factor in the final RHNA methodology. However, the methodology does consider the housing needs of individuals and families experiencing homelessness by allocating very low- and low-income units to all jurisdictions throughout the region.

*11. The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.*

The RHND included HCD's minimum replacement adjustment of 0.5 percent, which exceeds the region's demolition rate. This adjustment added 1,202 housing units to the RHND. Since the demolition adjustment in the RHND included significantly more units than were lost, it was not necessary to include a specific factor in the final RHNA methodology to address the loss of units.

*12. The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.*

By allocating 15% of RHNA according to jobs and 31% based on jobs/housing ratio, 4% by transit, and 42% by AFFH, the RHNA allocates the vast majority of units in existing urban areas with a strong focus on placing more units where jobs/housing ratios are imbalanced. These factors combine to place more units near jobs centers which, over time, will reduce commuting distances and associated GHG emissions throughout the region.

*13. Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.*

No other planning factors were adopted by AMBAG for the 6<sup>th</sup> Cycle RHNA.

Calculations are performed on unrounded numbers. Numbers shown here are rounded to the nearest whole number.

Jobs/housing ratio is the 2020 number of jobs divided by the 2020 number of housing units. A higher number reflects a larger imbalance between jobs and housing.

Transit Score: 1 = has transit service with 30-minute headways. 2 = has transit service with both 15- and 30-minute headways.

RCAA = Racially Concentrated Areas of Affluence.

TCAC = California Tax Credit Allocation Committee

## Frequently Asked Questions about RHNA

### Topics:

- Regional Housing Needs Allocation (RHNA) Overview
- Regional Housing Needs Determination (RHND) from HCD
- RHNA Methodology
- ABAG Housing Methodology Committee
- Connections between RHNA and Plan Bay Area 2050
- RHNA Subregions
- RHNA and Local Jurisdictions

## REGIONAL HOUSING NEEDS ALLOCATION (RHNA) OVERVIEW

---

### What is RHNA?

Local housing is enshrined in state law as a matter of “vital statewide importance” and, since 1969, the State of California has required that all local governments (cities, towns and counties, also known as local jurisdictions) adequately plan to meet the housing needs of everyone in our communities. To meet this requirement, each city or county must develop a Housing Element as part of its General Plan (the local government’s long-range blueprint for growth) that shows how it will meet its community’s housing needs. There are many laws that govern this process, and collectively they are known as [Housing Element Law](#).

The Regional Housing Need Allocation (RHNA) process is the part of Housing Element Law used to determine how many new homes, and the affordability of those homes, each local government must plan for in its Housing Element. This process is repeated every eight years, and for this cycle the Bay Area is planning for the period from 2023 to 2031.

### How does RHNA assist in addressing the Bay Area’s housing crisis?

The Bay Area’s housing affordability crisis is decades in the making. State law is designed to match housing supply with demand—particularly for affordable homes. Each new RHNA cycle presents new requirements to address dynamic housing markets, which in recent years have seen demand dramatically outstrip supply across all affordability levels.

RHNA provides a local government with a minimum number of new homes across all income levels for which it must plan in its Housing Element. The Housing Element must include sites zoned for enough capacity to meet the RHNA goals as well as policies and strategies to expand housing choices and increase housing affordability.

## Who is responsible for RHNA?

Responsibility for completing RHNA is shared among state, regional, and local governments:

- The **role of the State** is to identify the total number of homes for which each region in California must plan in order to meet the housing needs of people across the full spectrum of income levels, from housing for very low-income households all the way to market rate housing. This is developed by the [California Department of Housing and Community Development \(HCD\)](#) and is known as the Regional Housing Need Determination (RHND).
- The **role of the region** is to allocate a share of the RHND to each local government in the region. As the Council of Governments (COG) for the nine-county Bay Area, the Association of Bay Area Governments (ABAG) is responsible for developing the methodology for sharing the RHND among all cities, towns, and counties in the region. ABAG does this in conjunction with a committee of elected officials, city and county staff, and stakeholders called [the Housing Methodology Committee \(HMC\)](#).
- The **role of local governments** is to participate in the development of the allocation methodology and to update their Housing Elements and local zoning to show how they will accommodate their share of the RHND, following the adoption of the RHNA methodology.

## What are the steps in the RHNA process?

Conceptually, RHNA starts with the Regional Housing Needs Determination provided by HCD, which is the total number of housing units the Bay Area needs, by income group. The heart of ABAG's work on RHNA is developing the methodology to allocate a portion of housing needs to each city, town, and county in the region. ABAG has convened a [Housing Methodology Committee](#) made up of local elected officials and staff and stakeholders to advise staff on the proposed methodology that ABAG will release for public comment in fall 2020. Following that milestone, ABAG will then develop a draft methodology to send to HCD for its review in early 2021.

After ABAG adopts the final methodology in spring 2021, it is used to develop a draft allocation for every local government in the Bay Area. A local government or HCD can appeal any local government's allocation. After ABAG takes action on the appeals, it will issue the final allocation by the end of 2021. Local governments must update Housing Elements by January 2023, including identifying sites that are zoned with enough capacity to meet the RHNA allocation. ABAG's role in the RHNA process ends once it has allocated a share of the Regional Housing Needs Determination (RHND) to each local government in the Bay Area; HCD reviews and approves local Housing Elements.

### **What's the timeline for completing RHNA?**

The RHNA process is currently underway and will be complete by the end of 2021. Local governments will then have until January 2023 to update their Housing Elements. The proposed timing for the key milestones in the RHNA process is shown below:

<b>ABAG 2023-2031 RHNA and Plan Bay Area 2050 Key Milestones</b>	<b>Proposed Deadline</b>
Housing Methodology Committee kick-off	October 2019
Subregions form	February 2020
HCD Regional Housing Needs Determination	Summer 2020
Proposed RHNA methodology, draft subregion shares	Fall 2020
Final subregion shares	December 2020
Draft RHNA methodology to HCD for review	Winter 2021
Final RHNA methodology, draft allocation	Spring 2021
RHNA appeals	Summer 2021
Final RHNA allocation	End of 2021
Housing Element due date	January 2023

### **This is the 6th cycle for RHNA. What's different this time?**

Recent legislation will result in the following key changes for this RHNA cycle:

- It is expected there will be a higher total regional housing need. HCD's identification of the region's total housing needs has changed to account for unmet existing need, rather than only projected housing need. HCD now must consider overcrowded households, cost burdened households (those paying more than 30% of their income for housing), and a target vacancy rate for a healthy housing market (with a minimum of 5%).

- RHNA and local Housing Elements must affirmatively further fair housing. According to HCD, achieving this objective includes preventing segregation and poverty concentration as well as increasing access to areas of opportunity. HCD has mapped [Opportunity Areas](#) and has developed guidance for jurisdictions about [how to address affirmatively furthering fair housing in Housing Elements](#). As required by Housing Element Law, ABAG has surveyed local governments to understand [fair housing issues, strategies, and actions across the region](#).
- There will be greater HCD oversight of RHNA. ABAG and subregions must now submit the draft allocation methodology to HCD for review and comment. HCD can also appeal a jurisdiction's draft allocation.
- Identifying Housing Element sites for affordable units will be more challenging. There are new limits on the extent to which jurisdictions can reuse sites included in previous Housing Elements and increased scrutiny of small, large, and non-vacant sites when these sites are proposed to accommodate units for very low- and low-income households.

### **How can I be more involved in the RHNA process?**

Public participation is encouraged throughout the RHNA process especially at public meetings and during official public comment periods following the release of discussion documents and board decisions. Visit the ABAG website to:

- Learn about the [Housing Methodology Committee](#)
- View [upcoming meetings](#)
- Sign up for the [RHNA mailing list](#)

### **Is ABAG's prior RHNA available to review?**

Yes, you can find more information about the [2015-2023 RHNA](#) on the ABAG website. You can also view documents from the [2007-2014 RHNA](#) and [1999-2006 RHNA](#).

## **REGIONAL HOUSING NEEDS DETERMINATION (RHND) FROM HCD**

---

### **What is the Regional Housing Needs Determination?**

The California Department of Housing and Community Development (HCD) identifies the total number of homes for which each region in California must plan in order to meet the housing needs of people at all income levels. The total number of housing units from HCD is separated into four income categories that cover everything from housing for very low-income households all the way to market rate housing. ABAG is responsible for developing a methodology to allocate a portion of this housing need to every local government in the Bay Area.

The four income categories included in the RHND are:

- Very Low Income: 0-50% of Area Median Income
- Low Income: 50-80% of Area Median Income
- Moderate Income: 80-120% of Area Median Income
- Above Moderate Income: 120% or more of Area Median Income

### **What will the actual RHND and RHNA numbers look like this cycle?**

Although we expect the RHND will be significantly higher than prior cycles, we do not have this information at this time. We will receive the RHND from HCD in summer 2020; the methodology which will determine each local government's share of housing needs is currently being developed and is slated for release in fall 2020.

As a point of reference for how much the RHND might increase, for the current (6th) cycle, the Sacramento region received a RHND approximately 1.3 times higher than the previous cycle, while the Los Angeles region received a RHND approximately 3 times higher than the previous cycle. For the 5th RHNA cycle, the Bay Area's RHND was 187,990.

### **How does HCD develop the RHND?**

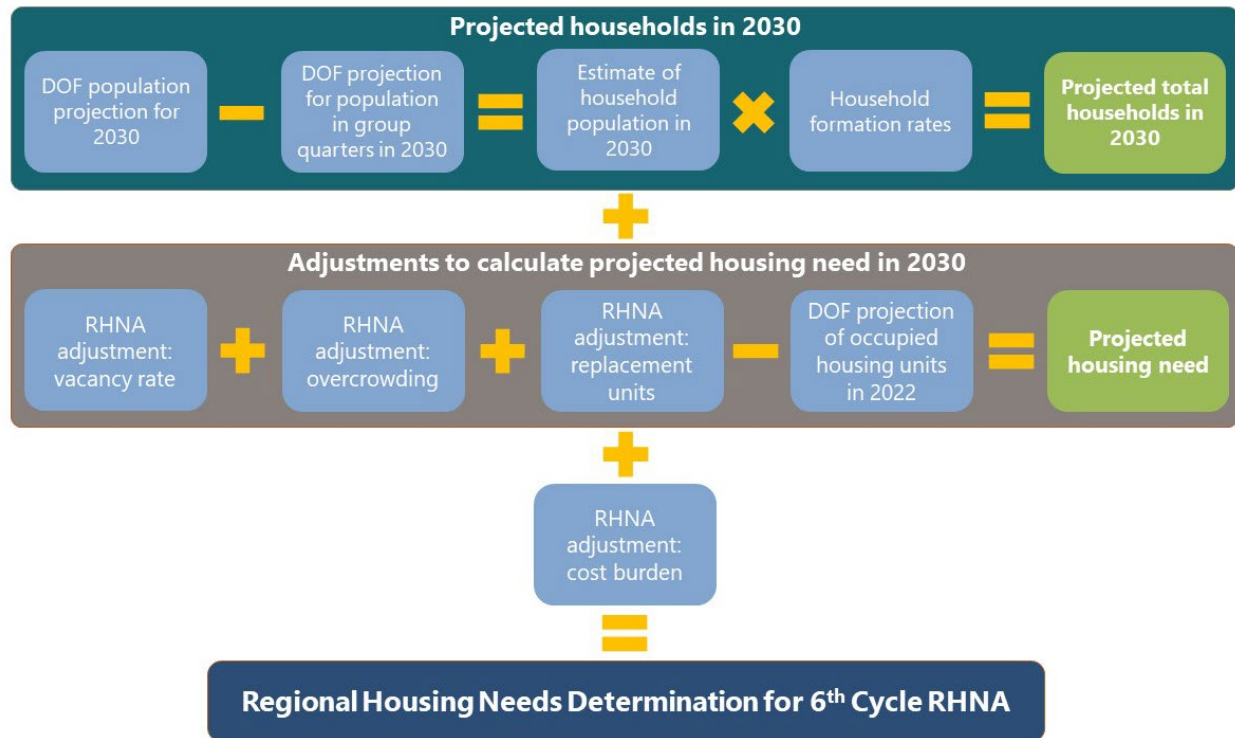

HCD is responsible for determining the number of housing units for which each region must plan, known as the Regional Housing Needs Determination (RHND). The RHND is based on a population forecast for the region from the California Department of Finance (DOF) and the application of specific adjustments to determine the total amount of housing needs for the region.

The adjustments are a result of recent legislation that sought to incorporate an estimate of existing housing need by applying factors related to:

- A target vacancy rate for a healthy housing market (defined as no less than 5 percent),
- The rate of overcrowding, which is defined as having more than one person per room in each room in a dwelling.
- The share of cost burdened households, which is defined as households paying more than 30% of household income on housing costs.

The RHNA process only considers the needs of the population in households who are housed in the regular housing market, and excludes the population living in group quarters, which are non-household dwellings, such as jails, nursing homes, dorms, and military barracks. HCD uses the age cohorts of the forecasted population to understand the rates at which people are expected to form households, which can vary for people at different stages of life. This results in the estimate of the total number of households that will need a housing unit in 2030 (which is the end date of the projection period for the Bay Area's RHNA cycle).

## HCD Process for Identifying Regional Housing Needs Determination (RHND)

The total number of projected households is then adjusted using the factors related to vacancy rate, overcrowding, and an estimate of the need for replacement housing for units that were demolished or lost. This results in a forecast of the number of housing units that will be needed to house all households in the region in 2031. The number of existing occupied housing units is subtracted from the total number of housing units needed, which results in the number of additional housing units necessary to meet the housing need. The final step is an adjustment related to cost-burdened households, which results in the RHND for the region.

## RHNA METHODOLOGY

### What is the RHNA methodology?

At its core, RHNA is about connecting regional housing needs with the local planning process and ensuring local Housing Elements work together to address regional housing challenges. Working with the [Housing Methodology Committee](#), ABAG develops a methodology, or formula, that shares responsibility for accommodating the Bay Area's Regional Housing Needs Determination (RHND) by quantifying the number of housing units, separated into four income categories, that will be assigned to each city, town, and county to incorporate into its Housing Element.

The four income categories included in the RHND are:

- Very Low Income: 0-50% of Area Median Income
- Low Income: 50-80% of Area Median Income

- Moderate Income: 80-120% of Area Median Income
- Above Moderate Income: 120% or more of Area Median Income

The allocation formula is made up of factors that use data for each jurisdiction in the region to determine each jurisdiction's share of the total housing need. The allocation formula assigns units based on relative relationships between jurisdictions within the region. For example, if there is a factor to allocate units based on access to jobs, then a jurisdiction with many jobs will be allocated more units and a jurisdiction with fewer jobs will be allocated fewer units.

### **What are the objectives and factors that must be considered in the RHNA methodology?**

The RHNA objectives provide the guiding framework for how ABAG must develop the methodology. ABAG is required to demonstrate how its methodology furthers each of the objectives. The RHNA factors include a longer list of considerations that must be incorporated into the methodology to the extent that sufficient data is available.

Summary of RHNA objectives [from [Government Code §65584\(d\)](#)]:

1. Increase housing supply and mix of housing types, with the goal of improving housing affordability and equity in all cities and counties within the region.
2. Promote infill development and socioeconomic equity; protect environmental and agricultural resources; encourage efficient development patterns; and achieve greenhouse gas reduction targets.
3. Improve intra-regional jobs-to-housing relationship, including the balance between low-wage jobs and affordable housing units for low-wage workers in each jurisdiction.
4. Balance disproportionate household income distributions (more high-income allocation to lower-income areas, and vice-versa)
5. Affirmatively further fair housing

Summary of RHNA factors [from [Government Code §65584.04\(d\)](#)]:

1. Existing and projected jobs and housing relationship, particularly low-wage jobs and affordable housing
2. Lack of capacity for sewer or water service due to decisions outside a jurisdiction's control
3. The availability of land suitable for urban development
4. Lands protected from urban development under existing federal or state programs
5. County policies to preserve prime agricultural land

6. The distribution of household growth assumed for regional transportation plans and opportunities to maximize use of public transportation and existing transportation infrastructure
7. Agreements between a county and cities in a county to direct growth toward incorporated areas of the county
8. The loss of units in assisted housing developments as a result of expiring affordability contracts.
9. The percentage of existing households paying more than 30 percent and more than 50 percent of their income in rent
10. The rate of overcrowding
11. The housing needs of farmworkers
12. The housing needs generated by the presence of a university within the jurisdiction
13. The housing needs of individuals and families experiencing homelessness
14. The loss of units during a state of emergency that have yet to be rebuilt or replaced at the time of the analysis
15. The region's greenhouse gas emissions targets provided by the State Air Resources Board

**What does it mean to “affirmatively further fair housing”?**

For the 2023-2031 RHNA, recent legislation added a new objective that requires the RHNA plan to “affirmatively further fair housing.” According to [Government Code Section 65584\(e\)](#), this means:

“Taking meaningful actions, in addition to combating discrimination, that overcome patterns of segregation and foster inclusive communities free from barriers that restrict access to opportunity based on protected characteristics. Specifically, affirmatively furthering fair housing means taking meaningful actions that, taken together, address significant disparities in housing needs and in access to opportunity, replacing segregated living patterns with truly integrated and balanced living patterns, transforming racially and ethnically concentrated areas of poverty into areas of opportunity, and fostering and maintaining compliance with civil rights and fair housing laws.”

In addition to this requirement for promoting fair housing as an outcome for RHNA, statutes required ABAG to collect information about [fair housing issues, strategies, and actions](#) in its survey of local jurisdictions about data to inform the development of the RHNA allocation methodology.

Lastly, a local jurisdiction's Housing Element must also affirmatively further fair housing and include a program that establishes goals and actions to do so. HCD has developed guidance for jurisdictions about [how to address affirmatively furthering fair housing in Housing Elements](#).

**Does RHNA dictate how local governments meet their communities' housing needs or where new housing goes within a given city or town?**

It is important to note the primary role of the RHNA methodology is to encourage a pattern of housing growth for the Bay Area. The final result of the RHNA process is the allocation of housing units by income category to each jurisdiction. It is in the local Housing Element that decisions about where future housing units could be located and the policies and strategies for addressing a community's specific housing needs are made. Local governments will include strategies related to issues such as addressing homelessness, meeting the needs of specific populations, affirmatively furthering fair housing, or minimizing displacement when they develop their Housing Elements. Although the RHNA methodology may include factors that conceptually assign housing to a particular geography, such as near a transit stop or in proximity to jobs, the resulting allocation from ABAG goes to the jurisdiction as a whole. It is up to local governments to use their Housing Elements to select the specific sites that will be zoned for housing.

The following table distinguishes between the narrow scope of RHNA and the broader requirements for jurisdictions' Housing Elements:

RHNA	LOCAL HOUSING ELEMENTS
Determines how many new homes each local jurisdiction must plan for in its Housing Element.	Includes goals, policies, quantified objectives, financial resources, and constraints for the preservation, improvement, and development of housing for all income levels.
Housing allocation is for an entire jurisdiction – housing is not allocated to specific sites or geographies within a jurisdiction.	Identifies sites for housing and provides an inventory of land suitable and available for residential development, including vacant sites and sites having potential for redevelopment.
A jurisdiction's housing allocation is divided across four income groups: very low-, low-, moderate-, and above moderate-income.	Analyzes special housing needs, such as those of the elderly; persons with disabilities, including a developmental disability; large families; farmworkers; families with female heads of households; and families and persons in need of emergency shelter.
Beyond allocation of housing units by income group, does not address housing needs of specific population groups nor include policy recommendations for addressing those needs.	Must demonstrate local efforts to remove governmental and nongovernmental constraints that hinder locality from meeting the need for housing for persons with disabilities, supportive housing, transitional housing, and emergency shelters.
	Analyzes existing affordable units at risk of converting to market-rate due to expiring subsidies or affordability contracts.
	Assesses existing fair housing issues and strategies for affirmatively furthering fair housing.

## ABAG HOUSING METHODOLOGY COMMITTEE

---

### What is the Housing Methodology Committee?

For the past several RHNA cycles, ABAG has convened an ad-hoc [Housing Methodology Committee \(HMC\)](#) to advise ABAG staff on the RHNA allocation methodology. The HMC for the 6<sup>th</sup> Cycle was convened in October 2019. The HMC is comprised of local elected officials and staff from every county in the Bay Area as well as stakeholder representatives selected by ABAG staff from a diverse applicant pool:

- 9 local government elected officials (one from each Bay Area county)
- 12 local government housing or planning staff (at least one from every county)
- 16 regional stakeholders representing diverse perspectives, from equity and open space to public health and public transit
- 1 partner from state government

View the HMC roster at [https://abag.ca.gov/sites/default/files/hmc\\_roster\\_january\\_2020.pdf](https://abag.ca.gov/sites/default/files/hmc_roster_january_2020.pdf).

### Why is the Housing Methodology Committee important?

ABAG's Housing Methodology Committee approach stands out compared to most other large Councils of Governments, going beyond the legal requirements by convening a forum where local elected officials, local government staff, stakeholder representatives, and the public can talk about the process together to inform the housing methodology.

The Housing Methodology Committee and its large stakeholder network is a key part of ABAG's approach to creating the RHNA allocation methodology. Through the HMC, ABAG staff seek to facilitate dialogue and information-sharing among local government representatives and stakeholders from across the Bay Area with crucial expertise to enable coordinated action to address the Bay Area's housing crisis. As ABAG strives to advance equity and affirmatively further fair housing, the agency seeks to ensure that a breadth of voices is included in the methodology process.

## CONNECTIONS BETWEEN RHNA AND PLAN BAY AREA 2050

---

### How are RHNA and Plan Bay Area 2050 related?

[Plan Bay Area 2050](#) is the Bay Area's next long-range regional plan for transportation, housing, the economy, and the environment, focused on resilient and equitable strategies for the next 30 years. Anticipated to be adopted in fall 2021, Plan Bay Area 2050 will establish a blueprint for future growth and infrastructure. Plan Bay Area 2050 must meet or exceed a wide range of federal and state requirements, including a per-capita greenhouse gas reduction target of 19 percent by 2035. Upon adoption by MTC and ABAG, it will serve as the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) for the San Francisco Bay Area.

By law, the RHNA Plan is required to be consistent with the development pattern from Plan Bay Area 2050. These two planning processes seek to address the Bay Area's housing needs over different time horizons: Plan Bay Area 2050 has a planning horizon of 2050, while the 6<sup>th</sup> cycle of RHNA addresses the need to address short-term housing needs, from 2023 to 2031. To achieve the required consistency, both the overall housing growth for the region, as well as housing growth for each jurisdiction, must be greater in the long-range plan than over the eight-year RHNA cycle.

### **Is Plan Bay Area 2050 used as part of the RHNA process?**

In past RHNA cycles, ABAG used its long-range housing, population, and job forecast as an input into the RHNA methodology. However, this approach is not required by Housing Element Law. For the 6<sup>th</sup> cycle of RHNA, the [Housing Methodology Committee \(HMC\)](#) is still considering whether or not to incorporate data from the Plan Bay Area 2050 Blueprint into the RHNA methodology. Some of the options the HMC has discussed are:

1. Using the forecasted development pattern from the Blueprint as a baseline input into the RHNA methodology
2. Using a hybrid approach that uses the forecasted development pattern from the Blueprint along with additional factors to represent policy goals that are underrepresented in the Blueprint to direct RHNA allocations
3. Not using forecasted data from the Blueprint, but include factors that align with the policies and strategies in the Blueprint to direct RHNA allocations.

HMC members expressed interest and some concerns in considering use of the Plan in the methodology. While the strategies integrated into the Draft Blueprint were adopted in February 2020, the HMC is awaiting further details on the outputs of the Draft Blueprint modeling, which are anticipated in summer 2020. At that time, they will make a determination on if and how to integrate the Plan Bay Area 2050 Blueprint into the RHNA methodology. If not, they may need to adjust factors and weights to achieve consistency under Option 3 above.

## **RHNA SUBREGIONS**

---

### **What is a subregion?**

Housing Element Law allows two or more jurisdictions to form a "subregion" to conduct a parallel RHNA process to allocate the subregion's housing need among its members. The subregion process allows for greater collaboration among jurisdictions, potentially enabling RHNA allocations that are more tailored to the local context as well as greater coordination of local housing policy implementation. A subregion is responsible for conducting its own RHNA process that meets all of the statutory requirements related to process and outcomes, including developing its own RHNA methodology, allocating a share of need to each member jurisdiction,

and conducting its own appeals process. The subregion’s final allocation must meet the same requirements as the regional allocation: it must further the statutory objectives, have considered the statutory factors, and be consistent with the development pattern of the SCS.

### **What subregions have formed for the 6<sup>th</sup> Cycle of RHNA in the Bay Area?**

ABAG has received notification of formation of two subregions:

1. **Napa County:** includes City of American Canyon, City of Napa, Town of Yountville, and the County of Napa (*does not include City of Calistoga or City of St. Helena*)
2. **Solano County:** includes City of Benicia, City of Dixon, City of Fairfield, City of Rio Vista, City of Suisun City, City of Vacaville, City of Vallejo, and County of Solano

### **Can a jurisdiction withdraw from a subregion?**

Consistent with ABAG’s approach for previous RHNA cycles, a jurisdiction may withdraw from a subregion without causing the dissolution of the entire subregion. If a jurisdiction withdraws from the subregion, the subregion’s share of housing needs will be reduced by the number of units the withdrawing jurisdiction would receive from the most current version of ABAG’s methodology available at the time when the jurisdiction decides to withdraw. The withdrawing member will then become part of the region’s RHNA process, and it would receive its allocation based on the methodology adopted by ABAG.

## **RHNA AND LOCAL JURISDICTIONS**

---

### **How are local jurisdictions involved in RHNA? Do they help create the housing methodology?**

Elected officials and staff from each county are on the [Housing Methodology Committee \(HMC\)](#) to represent the jurisdictions in that county. The HMC will make recommendations about the allocation methodology to the [ABAG Regional Planning Committee \(RPC\)](#), and the RPC will make recommendations to the [ABAG Executive Board](#), which will take action at key points in the RHNA process. Local governments will have the opportunity to comment on the proposed and draft methodology, both in written comments and at public meetings. There will also be an opportunity for local governments to file appeals on the draft allocations.

### **How does RHNA impact local jurisdictions’ general plans? What is a Housing Element?**

California’s [Housing Element Law](#) states that “designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need for all income levels is essential to achieving the state’s housing goals.” Once a city, town or county receives its RHNA allocation, it must then update the Housing Element of its general plan and zoning to demonstrate how it will accommodate all of the units assigned for each income category. General plans serve as a local government’s blueprint for how the city, town or county will grow and develop. There are seven elements that

all jurisdictions are required to include in the General Plan: land use, transportation, conservation, noise, open space, safety, and housing.

**What agency is responsible for the certification of Housing Elements?**

ABAG's role in the RHNA process ends once it has allocated a share of the Regional Housing Needs Determination (RHND) to each local government in the Bay Area. The [California Department of Housing and Community Development](#) (HCD) reviews and approves Housing Elements and is responsible for all other aspects of [enforcing Housing Element Law](#).

**Is there any funding and technical assistance available to assist local jurisdictions in creating their Housing Elements?**

In the 2019-20 Budget Act, Governor Gavin Newsom allocated \$250 million for all regions, cities, and counties to do their part by prioritizing planning activities that accelerate housing production to meet identified needs of every community. With this allocation, HCD established the [Local Early Action Planning Grant Program \(LEAP\)](#) with approximately \$25.6 million expected to come to cities and counties in the Bay Area and the [Regional Early Action Planning Grant Program \(REAP\)](#) with \$23.9 million expected to come to ABAG. The LEAP program augments HCD's [SB2 Planning Grants](#) which have provided approximately \$24 million in funding to localities in the Bay Area. ABAG is currently designing its REAP program to provide in-depth technical assistance to localities.

**Some individuals in the Bay Area view their jurisdictions as "built out." How might communities with little to no vacant land meet their respective housing allocations?**

Large and small communities throughout the Bay Area have successfully identified under-utilized, infill sites for housing development. In past RHNA cycles, numerous Bay Area communities were able to meet their housing allocation exclusively through the identification of infill sites to provide for future housing needs. Encouraging the development of Accessory Dwelling Units (ADUs) is another strategy many Bay Area communities have used to add more housing choices for residents.

**Will my jurisdiction be penalized if we do not plan for enough housing?**

State [Housing Element Law](#) requires that jurisdictions plan for all types of housing based on the allocations they receive from the RHNA process. The state requires this planning, in the form of having a compliant housing element, and submitting housing element annual progress reports, as a threshold or points-related requirement for certain funding programs (SB 1 Sustainable Community Planning Grants, SB 2 Planning Grants and Permanent Local Housing Allocation, etc.). Late submittal of a housing element can result in a jurisdiction being required to submit a four-year update to their housing element.

HCD [may refer jurisdictions to the Attorney General](#) if they do not have a compliant housing element, fail to comply with their HCD-approved housing element, or violate housing element

law, the housing accountability act, density bonus law, no net loss law, or land use discrimination law. The consequences of those cases brought by the Attorney General are up to the courts, but can include financial penalties.

In addition, as the housing element is one of the required components of the general plan, a jurisdiction without a compliant housing element, may risk legal challenges to their general plan from interested parties outside of HCD.

Local governments must also implement their commitments from the housing element, and the statute has several consequences for the lack of implementation. For example, failure to rezone in a timely manner may impact a local government's land use authority and result in a carryover of RHNA to the next cycle. Failure to implement programs can also influence future housing element updates and requirements, such as program timing. HCD may investigate any action or lack of action in the housing element.

### **Will my jurisdiction be penalized if we do not build enough housing?**

For [jurisdictions that did not issue permits for enough housing](#) to keep pace consistent with RHNA building goals, a developer can elect to use a ministerial process to get project approval for residential projects that meet certain conditions. This, in effect, makes it easier to build housing in places that are not on target to meet their building goals.

## **GLOSSARY OF ACRONYMS**

---

ABAG - Association of Bay Area Governments

AMI – Area Median Income

DOF - California Department of Finance

HCD - California Department of Housing and Community Development

HMC - Housing Methodology Committee

MTC - Metropolitan Transportation Commission

RHNA - Regional Housing Need Allocation

RHND - Regional Housing Need Determination

RTP/SCS - Regional Transportation Plan/Sustainable Communities Strategy

TCAC - California Tax Credit Allocation Committee

## Santa Monica: Regional Housing Needs Allocation

### What is the RHNA?

The State of California, as part of the State Housing Law, sets a targeted number of housing units that each regional council of governments in California must plan for. This targeted housing number known as the Regional Housing Needs Allocation, or RHNA, is updated every 8 years and is further divided amongst individual cities and counties by the regional council of governments.

### How will the RHNA impact Santa Monica?

The Southern California Association of Governments (SCAG) serves as the regional council of governments for Southern California and is responsible for allocating the RHNA numbers between six counties and 191 cities, including the City of Santa Monica. This year, the regional allocation for Southern California is significantly larger than it has been in past years, in recognition of the severity of the State's housing crisis. SCAG developed a methodology for splitting up the regional allocation, which is based on numerous factors such as the past, present, and future demand for housing, access to jobs, quality of transit, among other factors. To read more about the methodology, visit [SCAG's website](#).

It is important to recognize that the RHNA is a targeted housing number - Cities and counties do not have to build this number of units, but rather they are required by the state to plan for them and demonstrate that under the current land use and development standards, there is capacity to accommodate for this number of housing units. However, if a jurisdiction fails to demonstrate that they can accommodate their RHNA, it can result in the loss of local control and important funding resources.

For the RHNA cycle planning period of October 2021 through October 2029, the Southern California region received an allocation of 1.3 million units. That means that the State is requiring cities within Southern California to demonstrate that they can plan for and have the capacity to build up to 1.3 million new housing units over the next 8 years. For this 6<sup>th</sup> Cycle of the RHNA, Santa Monica has received an allocation of 8,874 new housing units, of which about 70% must be for lower income households.

## THE CITY OF LAFAYETTE'S HOUSING ELEMENT FREQUENTLY ASKED QUESTIONS

### What is the Housing Element?

The Housing Element is a chapter of Lafayette's General Plan. Every City in California must have a Housing Element, and this is the only part of the General Plan that must be regularly reviewed and approved by the State. Housing Elements are usually updated every five to eight years. Lafayette's current Housing Element covers the period from 2007 to 2014, and the updated Element will cover the period from 2014 to 2022.

### What does it contain?

The Housing Element contains information on the housing needs of the community, including the needs of lower-income households and people with special needs, such as homeless persons, seniors, and people with disabilities. Some of these needs are determined by the state-mandated Regional Housing Needs Allocation (see below). In addition, the Element provides a detailed explanation of how the jurisdiction addresses the needs of the community based on existing and future housing needs. Lastly, it contains an inventory of sites within the community that could accommodate the RHNA allocation of affordable housing if they were developed.

### What is the Regional Housing Needs Allocation (RHNA)?

The RHNA (pronounced REE-NAH) is an allocation of the State's projected housing needs to accommodate various income categories over the 8-year cycle of the Housing Element. The Association of Bay Area Governments (ABAG) receives a bulk allocation for the region from the State, and ABAG then assigns a portion of this regional allocation to each jurisdiction in the nine-county Bay Area, based on a complex model of job and population growth. The essential requirement of RHNA is that all jurisdictions need to demonstrate that its planning documents have enough land zoned at appropriate densities to allow the development of the housing needed to meet their allocation.

### What is the City of Lafayette's RHNA allocation?

Lafayette's total RHNA allocation for the current period (2007-2014) is 361 units, and for the next period (2014-2022) is 400 units. The 2014-2022 allocation was reduced as a result of a successful protest by Lafayette of their initial figures. The following illustrates the 2014-2022 allocation, broken down along various income categories. ABAG adopted a policy that allocated a greater share of affordable housing to those communities, including Lafayette, that have a less than average share of affordable housing currently, and a smaller share of affordable housing to those communities that currently accommodate much affordable housing.

Total Projected Need	Very Low	Low	Mod	Above Mod	Average Yearly Need
400	138	78	85	99	57
	34.5%	19.5%	21.3%	24.8%	

### Is the City required to make sure these units are built?

No, the RHNA allocation is not a prescription to build any units. And, the City itself does not build units; private developers do. The City is only required to show that there is enough land zoned at appropriate densities to accommodate this need, should a developer want to build these units. In addition, the City must demonstrate that its codes and requirements do not unduly constrain the building of housing (for example, it needs to show that housing can be built "as-of-right" in some zones, without requiring a land use permit).

### Does the inventory of sites mean these sites can only be used for housing?

No. The City is only required to show sites that could be used for housing, but the actual use of the sites is always a decision made by the owners. However, if a site in the inventory is developed with a completely non-housing use during the eight-year cycle of the Housing Element, the City is required to replace that site with another to ensure that the inventory's capacity is maintained.

### Does the City have enough land in the inventory to meet its RHNA allocation?

Yes, the City has prepared a draft inventory of sites which shows there is enough land to meet its RHNA allocation. While the inventory may change as a result of the public process, the City is required to ensure that it will meet its RHNA allocation during the eight-year cycle of the Housing Element.

### **Is there a minimum zoning density that the City must allow? What determines the minimum?**

The State sets standards to ensure that densities are high enough to allow affordable housing to be built. As a suburban community, the State has set this default density at 20 units per acre. Although Lafayette can, and does, have lower densities, the State requires zoning for multifamily housing to be at least 20 units per acre. When a city's population reaches 25,000 people then the minimum default density increases to 30 units per acre. Lafayette's 2010 census population was just under 24,000. Lafayette's General Plan establishes the housing density at 35 units per acre in the downtown and in multifamily zoning districts. The City may consider lowering the housing densities, which will be a topic of discussion during the community meetings.

### **What is a Density Bonus?**

A density bonus is a provision of State law and allows a developer to ask for and receive additional housing density (beyond what is allowed by the City's current zoning) in prescribed amounts, in return for providing affordable housing or senior housing within their developments. Even if the City does not adopt its own Density Bonus ordinance, it is still required to comply with the provisions of the State's Density Bonus law, which includes:

- Granting a sliding scale of market-rate density bonus percentages (20%-35%) based on the amount percentage of proposed affordable units;
- Providing up to three development concessions or incentives, depending on the percentage of affordable units provided;
- Granting a density bonus if a developer donates land for very low income housing; and
- Requiring jurisdictions to implement Density Bonus law through local codes.

### **Why is the City considering a Density Bonus ordinance?**

Several years ago, the City decided not to adopt a Density Bonus ordinance but rather issued guidelines for compliance with the State's Density Bonus law. However, the State is now offering to do a streamlined review of the city's Housing Element, if a Density Bonus ordinance is adopted before the City submits its draft Housing Element to the State. It is expected that the streamlined review will result in a significantly shorter review period by the State, since it will only review those parts of the Element that have changed since the last Element was certified.

### **What happens if the City elects to resign its membership from ABAG?**

In terms of the Housing Element, nothing would change. The City would still receive a RHNA allocation and be required by State law to complete the Housing Element, and have it certified by the State, regardless of its participation in ABAG. Further, continuing to participate in ABAG means that the City can have meaningful input on the RHNA allocation process and other programs conducted by ABAG.

### **Does having a Priority Development Area (PDA) affect the RHNA allocation?**

A City's PDA status alone does not have a direct relationship to the allocation of Regional Housing Needs by ABAG. A determining factor on where growth will occur is based on where there are transit nodes; in the case of Lafayette, the RHNA allocation is partially tied to the existence of the BART station. In addition, one of the criteria for becoming a PDA is proximity to transit nodes, so the BART station was a significant reason the PDA was approved for Lafayette.

### **What happens if the City does not complete the Housing Element, or fails to receive certification from the State?**

Successful certification of the Housing Element is directly tied to whether or not a jurisdiction is eligible to receive certain kinds of funding, including some transportation funds. Additionally, not having a certified Element puts a jurisdiction at risk of lawsuits from developers. Courts have required cities without approved Housing Elements to allow housing "as-of-right", without any discretionary review by the City until the Housing Element is certified, including in single-family zones.

### **What is the City doing to garner public comment and input on the Housing Element?**

The City is holding three community meetings at which residents can ask questions and provide input as the Housing Element is being developed. In addition, there will be opportunities for community input before the Planning Commission and the City Council, both during the draft review of the Housing Element (prior to initial comments from the State), as well as during the final review before the Housing Element is adopted. The following is a tentative schedule for these meetings:

1. Wednesday, April 30<sup>th</sup> – Introduction to the Housing Element
2. Tuesday, May 13<sup>th</sup> – Housing Sites Inventory, Density Bonus Ordinance, and Density Adjustments
3. Wednesday, May 28<sup>th</sup> – Policies and Programs

### **When does the Housing Element have to be submitted to the State?**

The Housing Element must be adopted by the City prior to submission of the final document in January 2015. As noted above, the City expects to adopt the Element in December 2014.

### **How can I find out more about this?**

The City has more information on its website at [www.lovelafayette.org/HE](http://www.lovelafayette.org/HE) or you can contact planning staff:

## Lafayette California: Overview

Since 1969, the State of California has required that all local governments adequately plan to meet the housing needs of everyone in our communities. To meet this requirement, each city or county must develop a Housing Element as part of its General Plan (the local government's long-range blueprint for growth) that shows how it will meet its community's housing needs. There are many laws that govern this process, and collectively they are known as [Housing Element Law](#).

The Regional Housing Need Allocation (RHNA) process is the part of Housing Element Law used to determine how many new homes, and the affordability of those homes, each local government must plan for in its Housing Element. This process is repeated every eight years, and for this cycle the Bay Area is planning for the period from 2023 to 2031.

Working with the State Department of Finance, the CA Department of Housing and Community Development (HCD) assigns future housing and population growth projections in eight-year cycles to every Council of Government in the State (in our case, the Association of Bay Area Governments, or ABAG). ABAG then assigns a number of units to each member jurisdiction, like Lafayette, San Francisco, Hayward, etc., which must ensure that there is enough land zoned at appropriate densities to accommodate the assigned RHNA. The RHNA number includes a distribution of units to be provided across the four income categories discussed above.

### Some key takeaways about RHNA

#### **We are *planning* for housing, not building it.**

The free market will determine if and when the required units are actually developed. Lafayette does not develop housing and no one will be forced to sell their property or build housing.

**If we are planning for housing, how should we plan for it and where should it be located?** The allocation has been provided by the state and regional governments, while there is an appeal process, we don't know the outcome of the appeal. To be prepared, we must develop a compliant plan for how we want to handle our allocation. The Housing Element update process is your opportunity to decide where the housing should go.

RE: Draft 6<sup>th</sup> Cycle RHNA Plan and Sand City Allotment

Dear Ms. Adamson:

This correspondence is in response to the Draft 6<sup>th</sup> Cycle (2023-2031) RHNA Plan and the allotment of 260 units in this cycle of the RHNA allocation to the City of Sand City. According to the Department of Finance, the City has a 2022 estimated population of 372 persons. There are approximately 184 dwelling units within the City (8 of which are currently under construction). Requiring a RHNA allocation of 260 that is approximately 141% of the existing number of all existing residential units in the City is patently unreasonable. The allocation to Sand City fails to meet the requirement of Cal. Gov. Code section 65584(d)(1) that the RHNA plan allocates in a manner that is equitable within the region. By comparison, if applied to the City of Monterey, the allocation to Sand City would be equivalent to allocating approximately 42,600 units to the City of Monterey based on its population of approximately 30,218 residents. Instead, your allocation in the draft plan allocates 3,654 units to the City of Monterey.

In addition, the allocation to Sand City ignores additional factors that the methodology requires be observed. For example, you are required to consider "the availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities..." and "land preserved or protected from urban development under federal or state programs, or both, designed to protect open space... environmental habitats..." (AMBAG Draft 6<sup>th</sup> Cycle RHNA Plan, April 2022, page 20); Cal Gov. code section 65584(d)(2). Sand City is small in land area (approximately 347 acres), landlocked between other jurisdictions and the Monterey Bay, with development within constrained by the presence of environmentally sensitive species and habitat protected and regulated by both the U.S. Fish and Wildlife Service and the California Department of Fish and Wildlife. About half of the City is located west of the Highway 1 freeway

corridor within an appealable Coastal Zone overlay regulated by the City's Local Coastal Plan (LCP); yet subject to appeal to the California Coastal Commission (CCC). The CCC has previously imposed strict limits on coastal development in Sand City due to the Coastal Act's prioritization of public access, coastal recreation, and the preservation of sensitive coastal habitat over that of residential land use.

In addition, a majority of the City has already been re-zoned to either High Density Residential (R-3) or Planned Mixed Use, both enabling high density and multifamily residential development, consistent with Government Code Section 65584(d)(2) for infill and equitable housing opportunities and Government Code Section 65584(d)(3) for an improved relationship between jobs and housing. There are almost no other practical opportunities for re-zoning to accommodate additional residences without impacting the City's primary revenue source, its regional shopping centers.

The City understands the State-wide need for affordable housing and job/housing balance. However, in light of the above constraints and efforts already implemented by the City, it is inconceivable how the City could meet the goals of the current RHNA allocation. The City of Sand City requests AMBAG lower Sand City's allotment to a number that is actually achievable in light of its small size and noted constraints.

Sincerely,

Vibeke Norgaard  
City Manager

## Pacific Grove to hold housing element update workshop

Pacific Grove City Hall. (James Herrera/Monterey Herald)

---

By **TESS KENNY** | [tkenny@montereyherald.com](mailto:tkenny@montereyherald.com) | Monterey Herald

PUBLISHED: July 22, 2022 at 2:43 p.m. | UPDATED: July 22, 2022 at 2:44 p.m.

---

The workshop, set for Monday from 6-8 p.m. at the Pacific Grove Community Center, will provide an update on the city's housing element, a state-required blueprint for how a locality's current and projected lodging needs can be satisfied. Housing elements are adjusted every eight years, as goals are realigned with present-day demands through a periodic process called the Regional Housing Needs Assessment, or RHNA.

Districts throughout the state are currently working through the latest housing element update. Local jurisdictions as part of the Association of Monterey Bay Area Governments will need to submit their revamped plans by December 2023. Though the process doesn't obligate local governments to build or approve new housing, it does mandate that they demonstrate appropriate zoning, development regulations and policies to support homebuilding goals.

In Pacific Grove, expectations are ambitious. Per the Regional Needs Allocation for 2023 to 2031, the city has been tasked with planning for a 14% jump in housing, an addition of 1,125 units that will necessitate not only rezoning but also changes to a general plan not touched since 1994.

"When I first saw (the allocation), like everyone, I thought it was a lot of units to plan for," said Anastacia Wyatt, Pacific Grove community development director. "I think we can feasibly plan for it, and we will do our best."

Wyatt said that with the scope and scale of rezoning that will be necessary to achieve a certified housing element, community engagement and input is particularly important. Hearing what residents need, she continued, will allow the city to reconcile citizen concerns and wants with whatever zoning and general plan changes are to come. Doing so will also help the city take an equitable approach to future homebuilding.

"I think equity is really critical. ... This is an opportunity to look at our community and think about what we want for the future," said Wyatt.

Pacific Grove Councilwoman Jenny McAdams reiterated Wyatt's optimism under a new housing element, even if she doesn't think the city will actually see the 14% increase in units by 2031.

"Do I think Pacific Grove will really build all (1,125 units)? No, but we're putting a policy in place that is supportive of additional housing," said Adams. "Our staff's job is to show that the city in good faith is implementing policing, zoning or incentives to
