Workshop Ad from The Weekly and Others

GARDEN DESIGN

This Garden Design workshop is part of a series on learning how to design a yard using the principles of watershed-wise landscaping. In this class, you will learn how to identify critical steps for successfully designing a watershed wise landscape. Topics include:

- Sizing and siting the rainwater capture area
- Applying key design principles
- Laying out a successful planting plan
- Developing a palette of climate-appropriate plants

The class is free, but **registration is required.**

Please note, these classes are limited to customers in the California American Water service areas.
