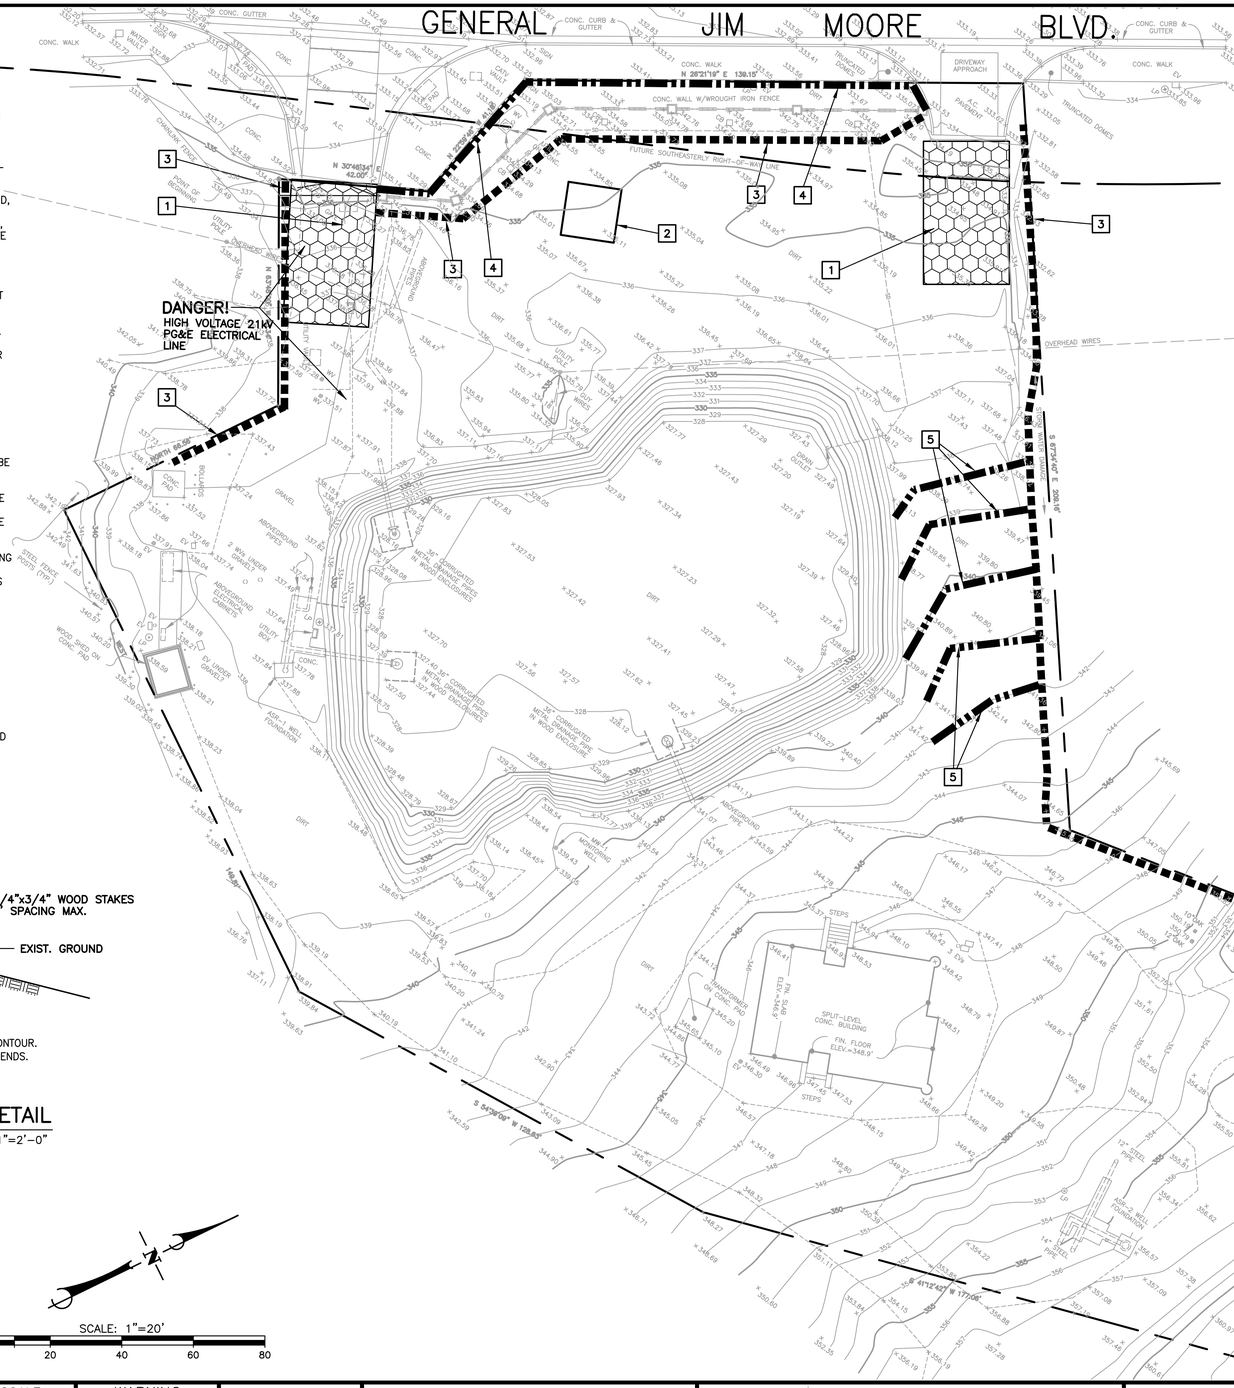
EROSION AND SEDIMENT CONTROL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MONITORING EROSION AND SEDIMENT CONTROL MEASURES PRIOR TO, DURING AND AFTER STORM EVENTS. MONITORING INCLUDES MAINTAINING A FILE DOCUMENTING ON-SITE INSPECTIONS, PROBLEMS ENCOUNTERED, CORRECTIVE ACTIONS AND NOTES AND A RED-LINE MAP OF REMEDIAL IMPLEMENTATION MEASURES.
2. REASONABLE CARE SHALL BE TAKEN WHEN HAULING ANY EARTH, SAND, GRAVEL, STONE, DEBRIS OR ANY HAZARDOUS SUBSTANCE OVER ANY PUBLIC STREET, ALLEY OR OTHER PUBLIC PLACE. SHOULD ANY BLOW, SPILL OR TRACK OVER AND UPON SAID PUBLIC OR ADJACENT PRIVATE PROPERTY, IMMEDIATE CLEAN-UP SHALL OCCUR.
3. CONSTRUCTION ENTRANCES AS SHOWN ON THE EROSION CONTROL PLAN SHALL BE INSTALLED PRIOR TO COMMENCEMENT OF GRADING. ALL CONSTRUCTION TRAFFIC ENTERING ONTO THE PAVED ROADS MUST CROSS THE STABILIZED CONSTRUCTION ENTRANCE.
4. SANITARY FACILITIES SHALL BE MAINTAINED ON-SITE AS APPROPRIATE.
5. DURING THE RAINY SEASON ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. ALL EARTH STOCKPILES OVER 2 CUBIC YARDS SHALL BE COVERED BY A TARP AND RINGED WITH STRAW BALES OR SILT FENCING. THE SITE SHALL BE MAINTAINED SO AS TO PREVENT SEDIMENT-LADEN RUNOFF TO ANY STORM DRAINAGE SYSTEM INCLUDING DRAINAGE SWALES AND WATER COURSES.
6. CONSTRUCTION OPERATIONS SHALL BE CARRIED OUT IN SUCH A MANNER THAT EROSION AND WATER POLLUTION WILL BE PREVENTED. STATE AND LOCAL LAWS CONCERNING POLLUTION ABATEMENT SHALL BE COMPLIED WITH.
7. THE FACILITIES SHOWN ON THE EROSION CONTROL PLAN HEREON ARE DESIGNED TO CONTROL EROSION AND SEDIMENT DURING THE RAINY SEASON, NOVEMBER 1 TO APRIL 15. FACILITIES ARE TO BE OPERABLE PRIOR TO OCTOBER 15 OF ANY YEAR. GRADING OPERATIONS DURING THE RAINY SEASON WHICH LEAVE DENUDED SLOPES SHALL BE PROTECTED WITH EROSION CONTROL MEASURES IMMEDIATELY FOLLOWING GRADING ON THE SLOPES. THIS WILL INCLUDE THE USE OF STRAW MULCH AND TACKIFIER, EROSION CONTROL BLANKETS, STRAW WATTLES AND HAY BALES.
8. THE EROSION CONTROL PLAN COVERS ONLY THE FIRST WINTER FOLLOWING GRADING WITH ASSUMED SITE CONDITIONS AS SHOWN ON THE EROSION CONTROL PLAN. PRIOR TO SEPTEMBER 15, THE COMPLETION OF SITE IMPROVEMENT SHALL BE EVALUATED AND REVISIONS MADE TO THIS PLAN AS NECESSARY WITH THE APPROVAL OF THE OWNER. PLANS ARE TO BE RESUBMITTED FOR APPROVAL PRIOR TO AUGUST 15 OF EACH SUBSEQUENT YEAR UNTIL SITE IMPROVEMENTS ARE ACCEPTED BY THE OWNER.
9. THE CONTRACTOR SHALL PLAN THEIR OPERATIONS SUCH THAT THE MINIMUM AREA OF THE SITE IS DISTURBED. CARE MUST BE EXERCISED TO PRESERVE THE MAXIMUM AMOUNT OF EXISTING VEGETATION THAT SERVES AS EROSION CONTROL.



EROSION CONTROL CONSTRUCTION NOTES

1. CONSTRUCT 24' x 40' STABILIZED CONSTRUCTION ENTRANCE USING STEEL VIBRATION PLATE ON 3" TO 6" MIN. DIM. AGGREGATE, 24" THICK OVER FILTER FABRIC, PRIOR TO THE START OF CONSTRUCTION.

SAFETY
Safety Installation Information
1. Vehicular gate systems provide convenience and security. Gate systems are comprised of many component parts. The gate operator is only one component. Each gate system is specifically designed for an individual application.
2. Gate operating system designers, installers and users must take into account the possible hazards associated with each individual application. Improperly designed, installed or maintained systems can create risks for the user as well as the bystander. Gate systems design and installation must reduce public exposure to potential hazards.
3. A gate operator can create high levels of force in its function as a component part of a gate system. Therefore, safety features must be incorporated into every design. Specific safety features include:
. Edges Sensors (contact)
. Guards for Exposed Rollers
. Photoelectric Sensors
. Screen Mesh
. Vertical Posts
. Instructional and Precautionary Signage
4. Install the gate operator only when:
a. The operator is appropriate for the construction and the usage class of the gate.
b. All openings of a horizontal slide gate are guarded or screened from the bottom of the gate to a minimum of 6 feet (1.8 m) above the ground to prevent a 2-1/4 inches (6 cm) diameter sphere from passing through the openings anywhere in the gate, and in that portion of the adjacent fence that the gate covers in the open position.
c. All exposed pinch points are eliminated or guarded, and guarding is supplied for exposed rollers.5. The operator is intended for installation only on gates used for vehicles.
5. Pedestrians must be supplied with a separate access opening. The pedestrian access opening shall be designed to promote pedestrian usage. Locate the gate such that persons will not come in contact with the vehicular gate during the entire path of travel of the vehicular gate.
6. The gate must be installed in a location so that enough clearance is supplied between the gate and adjacent structures when opening and closing to reduce the risk of entrapment.
7. The gate must be properly installed and work freely in both directions prior to the installation of the gate operator.
8. Permanently mounted access controls intended for users to activate, must be located at least 6 feet (1.8 m) away from any moving part of the gate and where the user is prevented from reaching over, under, around or through the gate to operate the controls. Outdoor or easily accessible controls shall have a security feature to prevent unauthorized use. Exception: Emergency access controls only accessible by authorized personnel (e.g. fire, police) may be placed at any location in the line-of-sight of the gate.
9. The Stop and/or Reset must be located in the line-of-sight of the gate. Activation of the reset control shall not cause the operator to start.
10. A minimum of two (2) WARNING SIGNS shall be installed in the area of the gate. Each placard is to be visible by persons located on the side of the gate on which the placard is installed.
11. For a gate operator utilizing a non-contact sensor:
a. Reference owner's manual regarding placement of non-contact sensor for each type of application. See Install Entrapment Protection section.
b. Care shall be exercised to reduce the risk of nuisance tripping, such as when a vehicle trips the sensor while the gate is still moving.
c. One or more non-contact sensors shall be located where the risk of entrapment or obstruction exists, such as the perimeter reachable by a moving gate or barrier.
12. For a gate operator utilizing a contact sensor such as an edge sensor:
a. One or more contact sensors shall be located where the risk of entrapment or obstruction exists, such as at the leading edge, trailing edge and post mounted both inside and outside of a vehicular horizontal slide gate.
b. A hard wired contact sensor shall be located and its wiring arranged so the communication between the sensor and the gate operator is not subject to mechanical damage.
c. A wireless device such as one that transmits radio frequency (RF) signals to the gate operator for entrapment protection functions shall be located where the transmission of the signals are not obstructed or impeded by building structures, natural landscaping or similar obstruction. A wireless device shall function under the intended end-use conditions.

SAFETY
Gate Construction Information
Vehicular gates should be installed in accordance with ASTM F2200: Standard Specification for Automated Vehicular Gate Construction.
1. General Requirements
1.1 Gates shall be constructed in accordance with the provisions given for the appropriate gate type listed, refer to ASTM F2200 for additional gate types.
1.2 Gates shall be designed, constructed and installed to not fall over more than 45 degrees from the vertical plane, when a gate is detached from the supporting hardware.
1.3 Gates shall have smooth bottom edges, with vertical bottom edged protrusions not exceeding 0.50 inches (12.7 mm) when other than the exceptions listed in ASTM F2200.
1.4 The minimum height for barbed tape shall not be less than 8 feet (2.44 m) above grade and for barbed wire shall not be less than 6 feet (1.83 m) above grade.
1.5 An existing gate latch shall be disabled when a manually operated gate is retrofitted with a powered gate operator.
1.6 A gate latch shall not be installed on an automatically operated gate
1.7 Protrusions shall not be permitted on any gate, refer to ASTM F2200 for Exceptions.
1.8 Gates shall be designed, constructed and installed such that their movement shall not be initiated by gravity when an automatic operator is disconnected, in accordance with the following.
1.8.1 Vehicular horizontal slide gate. Shall not result in continuous, unimpeded movement in either lineal direction of its travel.
1.9 For pedestrian access in the vicinity of an automated vehicular gate, a separate pedestrian gate shall be provided. The pedestrian gate shall be installed in a location such that a pedestrian shall not come in contact with a moving vehicular access gate. A pedestrian gate shall not be incorporated into an automated vehicular gate panel.
2. Specific Applications
2.1 Any non-automated gate that is to be automated shall be upgraded to conform to the provisions of this specification,
2.2 This specification shall not apply to gates generally used for pedestrian access and to vehicular gates not to be automated.
2.3 When the gate operator requires replacement, the existing gate shall be upgraded to conform to the provisions of this specification.
2.4 When the gate of an automated gate system requires replacement, the new gate shall conform to the provisions of this specification.

3. Vehicular Horizontal Slide Gates
3.1 The following provisions shall apply to Class I, Class II and Class III vehicular horizontal slide gates:
3.1.1 All weight bearing exposed rollers 8 feet (2.44 m), or less, above grade shall be guarded or covered.
3.1.2 All openings shall be designed, guarded, or screened from the bottom of the gate to the top of the gate or a minimum of 6 ft. (1.83 m) above grade, whichever is less, to prevent a 2 1/4 in. (57 mm) diameter sphere from passing through the openings anywhere in the gate, and in that portion of the adjacent fence that the gate covers in the open position. The gate panel shall include the entire section of the moving gate,including any back frame or counterbalance portion of the gate.

3.1.3 A gap, measured in the horizontal plane parallel to the roadway, between a fixed stationary object nearest the roadway, (such as a gate support post) and the gate frame when the gate is in either the fully open position or the fully closed position, shall not exceed 2 1/4 inches (57 mm). Exception: All other fixed stationary objects greater than 16 in. (406 mm) from the gate frame shall not be required to comply with this section.
3.1.4 Positive stops shall be required to limit travel to the designed fully open and fully closed positions. These stops shall be installed at either the top of the gate, or at the bottom of the gate where such stops shall horizontally or vertically project no more than is required to perform their intended function.
3.1.5 All gates shall be designed with sufficient lateral stability to assure that the gate will enter a receiver guide, refer to ASTM F2200 for panel types.
3.2 The following provisions shall apply to Class IV vehicular horizontal slide gates:
3.2.1 All weight bearing exposed rollers 8 feet (2.44 m), or less, above grade shall be guarded or covered.
3.2.2 Positive stops shall be required to limit travel to the designed fully open and fully closed positions. These stops shall be installed at either the top of the gate, or at the bottom of the gate where such stops shall horizontally or vertically project no more than is required to perform their intended function.

2. THE INSTALLATION, ALL EQUIPMENT, AND ALL SYSTEMS SHALL COMPLY AND CONFORM WITH ALL THE REQUIREMENTS OF THE CURRENT NATIONAL ELECTRICAL CODE, STATE OF CALIFORNIA CODES AND ALL LOCAL CODES ADOPTED BY THE AUTHORITY HAVING JURISDICTION, EVEN IF ALL DETAILS OF SUCH REQUIREMENTS ARE NOT SHOWN ON THE DRAWINGS.
3. ALL ELECTRICAL AND INSTRUMENT EQUIPMENT AND WIRING SHALL BE UL LISTED AND LABELED FOR THE SERVICE INTENDED OR SHALL BE APPROVED BY A NATIONALLY RECOGNIZED TESTING LABORATORY APPROVED BY THE DISTRICT.
4. ELECTRICAL TESTING PER THE SPECIFICATIONS IS REQUIRED. CONTRACTORS TEST PLAN SHALL BE SUBMITTED FOR APPROVAL.

SPECIFIC REQUIREMENTS

1. ALL UNDERGROUND CONDUITS SHALL BE SCHEDULE 40 PVC, UL LISTED UNLESS NOTED OTHERWISE, EXCEPT THE FIRST AND LAST ELBOWS AT THE STUB–UPS SHALL BE PVC–COATED RIGID GALVANIZED STEEL (PVC–RGS).
2. ABOVEGROUND CONDUITS SHALL BE RGS, UL LISTED UNLESS NOTED OTHERWISE.
3. CONDUITS IN CHEMICAL ROOMS SHALL BE SCH. 40 PVC UNLESS NOTED OTHERWISE. SUPPORTS IN CHEMICAL ROOMS SHALL BE FIBERGLASS.
4. CONDUIT ROUTING AND EQUIPMENT LOCATIONS ARE GENERALLY SHOWN DIAGRAMMATICALLY. CONTRACTOR SHALL COORDINATE ALL INSTALLATIONS WITH THE MECHANICAL AND CIVIL/STRUCTURAL CONTRACTORS TO DETERMINE EXACT ROUTING AND LOCATIONS AND TO AVOID INTERFERENCES.
5. POWER CONDUITS (CP–X) SHALL BE SPACED A MINIMUM OF 12" FROM INSTRUMENT CONDUITS (CJ–X) EXCEPT AT STUB–UPS.
6. CONTRACTOR SHALL IDENTIFY EACH CONDUIT USED BY INSTALLING A STAINLESS STEEL TAG STAMPED WITH THE CONDUIT NUMBER AT ALL STUB–OUTS, STUB–UPS AND IN PULLBOXES AND TERMINATION BOXES. AN AS–BUILT SKETCH AND PHOTOGRAPH SHALL BE PROVIDED OF THE EXISTING END OF THE DUCTBANK IDENTIFYING THE CONDUITS USED BY CONDUIT NUMBER. ANY CONDUITS NOT EXTENDED SHALL ALSO BE SHOWN IN THE SKETCH.
