MONTEREY PENINSULA WATER MANAGEMENT DISTRICT PERMIT FOR
APPLICATION 27614--CARMEL RIVER IN MONTEREY COUNTY

On July 6, 1995, the State Water Resources Control Board (SWRCB) adopted Decision 1632 which approves issuance of a water right permit for the New Los Padres Reservoir Project of Monterey Peninsula Water Management District. The decision lists the permit terms for inclusion in the permit. On October 25, 1995, the SWRCB issued Permit 20808, pursuant to Decision 1632.

It has been brought to our attention that Decision 1632 contains typographical errors in Permit Tables A and B. The typographical corrections are listed in the enclosed Order regarding Decision 1632. Permit 20808 is being revised concurrently with the corrections to Decision 1632.

If you have any questions regarding this matter, I can be contacted at (916) 657-1359. Katherine Mrowka is the staff person presently assigned to this matter, and she can be contacted at (916) 657-1951.

Sincerely,

Gerald E. Johns
For Edward C. Anton, Chief
Division of Water Rights

Enclosure

ORDER CORRECTING DECISION 1632
DATED JULY 6, 1995

AND PERMIT 20808
ISSUED OCTOBER 25, 1995

WHEREAS:

1. Decision 1632 was approved by the State Water Resources Control Board on July 6, 1995. The decision approves issuance of a permit pursuant to Application 27614 of Monterey Peninsula Water Management District (MPWMD) for construction of the New Los Padres Reservoir Project on the Carmel River in Monterey County.
2. Permit 20808 was issued pursuant to Decision 1632 on October 25, 1995.
3. Decision 1632 and Permit 20808 contain Permit Tables A, B and C which describe the instream flow requirements and related water year supply index. The three tables contain typographical errors.
4. Permit Table A, "Minimum Instream Flow Requirements Below New Los Padres Dam", contains an error in the dry year requirements for the column titled "January-March". The flow requirement is listed as 20 cubic feet per second (cfs) below New Los Padres Dam. The correct flow requirement is 35 cfs, based upon MPWMD Supplemental EIR, page 4-25.
5. Permit Table B, "Minimum Instream Flow Requirements At Carmel River Narrows and Lagoon", contains an error in the critically dry year requirements for the column titled "January-March". The flow requirement is listed as 40 cfs to the lagoon. The correct flow requirement is 20 cfs, based upon MPWMD Supplemental EIR, page 4-26.
6. Permit 20808 is missing information in Permit Table C, in the columns titled "Below Normal" and "Dry." The Order revises the permit to include the information from Decision 1632 in these columns.
7. The Chief, Division of Water Rights (Division) is delegated the authority to correct typographical errors in decisions approved by the SWRCB and permits issued by the Division.

NOW, THEREFORE, IT IS ORDERED THAT:

Permit Tables A, B and C of Decision 1632, adopted July 6, 1995 and Permit 20808, issued October 25, 1995 are hereby revised as shown. The approved additions to both Decision 1632 and Permit 20808 are indicated by underline and the deletions are indicated by ~~strikeout~~. The omitted material related solely to Permit 20808 is indicated by double underline.

PERMIT TABLE A		
MINIMUM INSTREAM FLOW REQUIREMENTS BELOW NEW LOS PADRES DAM		
JANUARY-MARCH	APRIL-MAY	JUNE-DECEMBER
Normal or Better Years	Normal or Better Years	Normal or Better Years
Maintain 20 cfs below New Los Padres Dam for juvenile rearing until an attraction event occurs. Once an attraction event ³ occurs, maintain 50 cfs below New Los Padres Dam for migration, spawning, and incubation purposes.	Maintain 40 cfs below New Los Padres Dam for smolt emigration.	Maintain 20 cfs below New Los Padres Dam for juvenile rearing.
Below Normal Years	Below Normal Years	Below Normal Years
Same flow requirements as Normal or Better Years.	Same flow requirements as Normal or Better Years.	Same flow requirements as Normal or Better Years.
Dry Years	Dry Years	Dry Years
Same flow requirements as Normal or Better Years except that once an attraction event occurs, maintain 20 <u>35</u> cfs below New Los Padres Dam for migration, spawning, and incubation purposes.	Maintain 30 cfs below New Los Padres Dam for smolt emigration.	If usable storage in New Los Padres Reservoir is greater than 5000 AF, maintain 20 cfs below New Los Padres Dam for juvenile rearing. If usable storage in New Los Padres Reservoir is less than 5000 AF, maintain 10 cfs below New Los Padres Dam for juvenile rearing.

Critically Dry Years	Critically Dry Years	Critically Dry Years
Same flow requirements as Normal or Better Years except that once an attraction event occurs, maintain 20 cfs below New Los Padres Dam for migration, spawning, and incubation purposes.	Maintain 20 cfs below New Los Padres Dam for smolt emigration.	Maintain 10 cfs below New Los Padres Dam for juvenile rearing.
Critically Low Storage	Critically Low Storage	Critically Low Storage
Maintain 5 cfs below New Los Padres and San Clemente Dams.	Maintain 5 cfs below New Los Padres and San Clemente Dams.	Maintain 5 cfs below New Los Padres and San Clemente Dams.

PERMIT TABLE B		
MINIMUM INSTREAM FLOW REQUIREMENTS AT CARMEL RIVER NARROWS AND LAGOON		
JANUARY-MARCH	APRIL-MAY	JUNE-DECEMBER
Normal or Better Years	Normal or Better Years	Normal or Better Years
<p>Maintain 5 cfs to the lagoon for juvenile rearing until an attraction event is projected.</p> <p>Whenever an attraction event is projected, maintain 200 cfs to the lagoon for the duration of the attraction event.</p> <p>Following an attraction event, provide migration flows of 200 to 60 cfs to the lagoon, depending on estimated natural recession rates.</p> <p>Following the migration period, maintain 40 cfs to the lagoon and 70 cfs at the Narrows for spawning.</p>	Maintain 40 cfs to the lagoon for smolt emigration.	Maintain 5 cfs to the lagoon for juvenile rearing.

PERMIT TABLE B
